* The reduction in 1876-77 is partly consequent on the capitalisatio of a portion of these pensions, *see* previous item.
† The payments in 1877-78 and 1878-79 are together equal to those of two normal years, the variation is in the repayment of pensions issued in the Colonies.
‡ The increases in 1881-82 and 1882-83 are due to transfers of certain pensions from the civil head of "Superannuation, Retired, and Compassionate Allowances.

APPENDIX No. 25.

EAST INDIA IRRIGATION COMPANY.

Handed in by Mr. S. Jacob, with reference to Q. 9016.

DESPATCH from the GOVERNMENT OF INDIA. 16 July, 1867. No. 114.—Public Works.

IRRIGATION.

To the Right Honourable the Secretary of State for India.

SIR, Simla, 16 July 1867.

RECENT events in Cuttack have led us to reconsider the probable results that will follow if the prosecution of the irrigation works in that and the neighbouring districts continues in the hands of the East India Irrigation Company,

2. The Government of India for the last three or four years has, at various times in its correspondence with the Home Government, expressed its opinion that the State should undertake directly all irrigation works that it can practically manage, in preference to entrusting them to private companies. This conclusion has rested on the conviction that the interests involved in the application of water to the irrigation of the soil are so complicated that it becomes almost indispensable that the Government should exercise over companies entrusted with irrigation works a control little short of absolute. It would be exceedingly difficult so to frame any agreement between such a company and the Government as should at the same time effectually secure this control and satisfy the company, which has a right to look for ample returns on the capital invested by them; and it would be hardly less difficult to enforce the necessary control, even if the clauses of the agreements could be effectively framed.

3. We can say, without any hesitation, that almost every communication that has passed between our Government and the Government of Bengal, or the Agent of the East India Irrigation Company, relative to the affairs of this Company, has served to give practical confirmation to the conclusions which, as above explained, we had before adopted on a general consideration of the probabilities of the case. There is hardly any single question which has thus arisen for discussion which has not been complicated, and its difficulties sensibly increased, beyond what it otherwise need have been, owing to the intervention of the Company between the Government and the community occupying the districts in which the Company's operations are undertaken.

4. In making these remarks nothing is further from our wish than to imply that the Company's officers have taken up any position which they were not fairly entitled to take up, or which it was not reasonable to expect that they might take up, having regard to the relation which they occupy as representatives of the Company, and as being bound by their sense of duty to attend first to what they deemed to be the legitimate interests of the Company. Our contention is, that in the very nature of the agreement entered into between the Company and the Government, great difficulties must be and are engendered in all important questions that have to be dealt with in relation to the prosecution of the Company's works and the extension of irrigation to the country.

5. You are aware that, notwithstanding the strong opinions which we hold as to the inconvenience of the arrangement that has been entered into with the Company, it has been our earnest wish to do all in our power to facilitate the operations of the Company, and to act fully up to the spirit of any actual, or implied, engagements entered into with them in past years. If it be necessary to adduce any distinct proof of this disposition on the part of the Government of India, we would refer to our recent resolutions to entrust to this Company the execution of the Soane Canal project, and to make grants of money to aid in the construction of the works in Cuttack, the Company's funds having proved insufficient to secure their prosecution with that activity which, in the altered condition of this province, we deem so desirable. And we may assure Her Majesty's Government that it will continue to be our desire to act in this same manner so long as the present arrangements between the Government and the Company shall be maintained.

6. But the terrible calamity which has recently fallen on Orissa and Western Bengal has forced upon us the consideration of the question, whether we can any longer with propriety permit the existing arrangements to continue in force, if it be possible to induce the Company to give up their rights under their contract.

7. So far as any mere inconvenience to ourselves and our officers is concerned, though it is not without serious importance, yet it would not alone have led us to think of any such contingency as that which we have just spoken of. Had we, therefore, been disposed to think it likely that the further prosecution of the irrigation works undertaken by the Company, and their future practicable operation, would really go on in a manner which should be satisfactory to the country, we should have continued to do our best in giving effect to the agreement with the Company, without remonstrance or attempt to free ourselves from the burden it imposes upon us.

8. But in no respect can we look forward hopefully to the prospect before us if the contract is maintained. It is apparent that the financial means of the Company are not equal to the demands which the present necessities of the country so urgently require to be met. At the meeting of the shareholders of the Company in November last, the chairman stated that the Directors had found it necessary and expedient to reduce the amount of outlay on the works, with the object, as it is understood, of waiting to see what would be the financial results of the portion of the works already executed before extending them further. Nor, so far as we are able to judge, is there any reasonable prospect of the resources of the Company being enlarged in the present condition of the money market either in this country or in England. The shares of this Company have long been at a considerable discount, and it is pertinent to remark that the stock of the Madras Irrigation Company, though carrying a guarantee of five per cent. interest, is also at a small discount, plainly showing the disfavour in which such enterprises are now viewed in London. As to the future, the probable requirements of the Government of India for works of irrigation, and those of the guaranteed railways, will give the public the means of investing their money on terms more favourable than those offered by the East India Irrigation Company; and it may, we think, fairly be doubted, therefore, whether that class of investors which is disposed to place its funds in Indian securities will have any appreciable balance left for investment in an unsecured stock already at a discount, after the demands for subscription to Government and guaranteed stocks shall be fully met.

9. In further illustration of the difficulties with which the Company has to contend, we may mention the unwillingness of the people to take the water at present. It will probably require time, and a lowering of the price of water before this unwillingness will be overcome; and meanwhile the Company will not receive the profits which were looked for, nor obtain an adequate return for its outlay. This state of things may last for years, and the Company cannot apparently afford to wait for its returns. To the Government, on the other hand, the question of immediate return for the outlay is of less importance. Once assured that there is a reasonable prospect of an adequate return

eventually, the Government can afford to wait till the people learn to use and to value the water, and to pay for it accordingly. It is true that at the meeting of the shareholders in May last a disposition was shown to push on the works, but this was apparently only rendered practicable by the financial aid afforded by our Government.

10. We entirely disclaim the intention of making any reflection on the Company for the manner in which their operations have been hitherto carried out, or for the mode in which they have raised or applied their capital. It is incontestable that a large sum has been raised and spent, and it is even probable that had the Company not come forward, the Government would, up to the present time, have done much less than has been done towards the construction of irrigation works in Cuttack. But the position of the Government with relation to the execution of irrigation works has, within the last year, become entirely changed, and our business is no longer with the past but with the present, and the immediate future, and it is impossible for us to avoid the conclusion that, for the reasons we have above given, the means of the Company henceforth will not only be relatively far inferior to those of the Government, but absolutely insufficient for the real necessities of the country.

11. In truth this is already the case in a marked manner, and so far from the Company any longer being the medium by help of which funds are supplied to the State for these works, it is the Government which now supplies the Company, and a monthly subsidy of 20,000*l.* from the Government Treasury gives them the means of carrying out their undertaking with an energy in some degree commensurate with its true importance.

12. Having weighed these considerations and those arising from the complications already caused in adjusting the demands of water rate and land revenue, we have felt it to be our duty to suggest to you that a proposal should be made to the Company to give up the undertaking to the Government of India, the Company receiving in return full indemnification for all past outlay, and a fair compensation for future possible profits.

See Report lately made to H. M. Government, in the Revenue Department.

13. In considering the exact terms that may be offered to the Company, we are inclined to err on the side of liberality. It is very important that if the existing engagements are terminated, this shall be done in a manner that shall command good feeling towards the Government on the part of the shareholders and officers of the Company.

14. The Government of India is aware, on the one side, that a sensible portion of the capital of the Company has been appropriated to the payment of interest to the shareholders, that the existing stock is at a discount, and that the prospects of profits from the spread of irrigation are uncertain. On the other hand, they do not overlook that the shareholders have invested their capital in good faith, with the reasonable expectation of securing at least a fair return upon it, and with some prospect of that return being large; that the Company has thus far carried out its operations with all proper regard to its obligations; that there are in the service of the Company many persons who naturally and fairly have looked upon their offices as likely to be lasting, and to afford them a provision which, if not permanent, was at all events certain not to be soon stopped.

15. On the whole, therefore, we are inclined to suggest the following terms for your consideration:—

First. The whole paid-up capital of the Company to be converted at par either into five per cent. debentures of the Government of India, repayable at par in 60 years, or into terminable annuities, which we consider the preferable mode of conversion; or, if such an arrangement would prove more acceptable to the shareholders, we would propose to convert the capital partly in the one way and partly in the other.

Second. The whole of the cash balance, and of the liabilities and claims of the Company, to be transferred to the Secretary of State; the liabilities to be declared previous to the transfer, and accepted by an officer or officers of the Government after due scrutiny.

Third. The whole of the works and stores of the Company, and all their property, whether in England or India, to be transferred to the Secretary of State, with all papers and accounts connected with the undertaking.

Fourth. The Government of India to take into its service, provisionally, all persons now employed by the Company in India on the works or business of the Company, from the date of the transfer taking place, who may express their wish to enter the service of Government, and to declare, as early as possible afterwards, whom among them it does not wish to retain in its service. To all persons in permanent employ not retained in the service of the Government, a sum equal to six months' salary shall be paid as compensation to natives of India, and as affording to Europeans the means of returning to their homes. In the case of engagements for limited periods compensation will be allowed according to the merits of each case.

Fifth. The Government of India shall pay to the Company all their expenses connected with the Soane project, and 10 per cent. additional to cover interest.

Sixth. A further sum of 50,000*l.* shall be placed at the disposal of the Board of Directors of the Company, either in cash or in five per cent. debentures, or in terminable annuities, as above, as they prefer, to allot at its discretion as a bonus to the shareholders on the abandonment of the Orissa and Soane concessions, and as compensation to the officers of the Company, especially those in England, who lose their posts under these arrangements.

Seventh. The Company then shall relinquish entirely all its claims in respect both to the Orissa project and the Soane project.

16. We submit for your consideration that these terms will contain an equitable offer to the Company neither unduly onerous on the finances of India nor going beyond a reasonable compensation to the shareholders, while they are conceived in a due spirit of liberality and with an anxious desire to prevent any personal injury arising to the servants of the Company.

17. In ordinary cases it would be proper, before making such a proposal as we have now brought forward, to obtain an accurate, or at least an approximate, valuation of the works which the Company has constructed, and which the Government is to take over. In the present case, however, we attach so much importance to the early settlement of the matter, that we are disposed to forego making any conditions with the Company as to the value or state of the works. Any such conditions would probably lead to discussions and delay, and we prefer to run the risk of some overpayment for the works rather than continue longer the present unsatisfactory relations with the Company.

18. We may mention, however, that the works have been visited by Colonel Morton, R.E., an officer of great experience in irrigation works, and also by Colonel Nicolls, R.E., the Chief Engineer of Bengal. Both these officers, and also Mr. Crommelin, the Superintending Engineer in the service of the Government at Cuttack, agree in stating that the works are good. These statements have not been made on any critical examination nor in any official report, but we are satisfied that in a general way they are correct. In the same way we learn that in point of actual cost, that is, of the actual outlay upon the works themselves, they are cheap. So far, then, we have some grounds for believing that the Government would not pay any extravagent sum in taking over the works as proposed. But there is a further consideration as to the cost of the works in regard to which we are not satisfied. This is, the charges which they have to bear in addition to the actual cost of construction, owing to the other expenses of the Company, which must be regarded as charges upon the works if they are taken over, by accepting the Company's entire outlay of capital. We have no precise information on this point, but the general impression derived from their inspection by the engineers we have just named was that the works could have been constructed by the Government Public Works Department, including the cost of establishment and all other charges, for considerably less than the capital outlay of the Company. It is probable then, on the whole, that the works, if taken over in the manner we propose, will not in themselves be cheap to the Government. But this risk, as before said, we are prepared to accept, in consideration of the important advantages of getting rid of so unsatisfactory an agency for future constructions of this kind.

19. And, after all, the amount to be risked is not great, if compared with the object in view. By the last reports we possess, the entire amount of capital raised by the Company is 719,088*l.*; adding the 50,000*l.* we propose to give them as a bonus, the amount becomes 769,088*l.*, which, at five per cent., represents an annual

charge to the State of 38,454*l.*, or about four lakhs. This sum is susceptible of slight increase from the repayment of the expenses of the Company connected with the Soane project (for which, however, there will be a certain value received) and from outlay incurred by the Company since the date of the last returns. But allowing for this, the annual charge we are likely to incur (assuming that the capital and bonus are converted into debentures) will not exceed 45,000*l.*, or 4½ lakhs; and this, we have no doubt will eventually be more than covered by the profits of the irrigation, so that we expect the proposal we now make will in the end prove financially advantageous, as well as greatly beneficial in all other points of view.

20. We have been informed by telegraph that the Lieutenant Governor of Bengal concurs generally in the above proposals.

We have, &c.
(Signed) JOHN LAWRENCE.

* Government of India letter proposing to take over the works was dated July 16, 1867.

† The Secretary of State's first offer to take over the works, repaying capital at par, was made on 22nd November 1867.

‡ The shares were fully paid up in January 1869, but there is no quotation after December 1868, the Company having accepted the Secretary of State's offer on 30th November 1868.

APPENDIX No. 31.

Paper handed in by Mr. Stephen Jacob, C.S.I.

MADRAS IRRIGATION AND CANAL COMPANY.

MEMORANDUM explaining the ARRANGEMENT under which, and the TERMS on which, the IRRIGATION WORKS of the COMPANY were taken over by GOVERNMENT.

(*See* Question 9782.)

In 1858 a guarantee was given to the Madras Canal and Irrigation Company of a minimum interest of 5 per cent. on a capital not exceeding a million sterling, to be spent on a single scheme, the selection of which was left to the Government of Madras. It was especially provided that the works to be undertaken should be complete in themselves, and not requiring additional outlay to render them remunerative.

The work selected was a canal to lead from Kurnool to the eastern coast, and operations were commenced by the construction of an anicut near that town across the river Toongabudra. It was, however, soon discovered that a very formidable cutting would be required; and therefore it was determined to have another anicut at Sunkasala, 18 miles above Kurnool, at a much higher level.

No formal contract was signed till June 1863. It was then stipulated that the net profits should be devoted,—

(1.) To pay the guaranteed interest annually accruing on the million originally raised;

(2.) To pay 5 per cent. on any unguaranteed capital that might be raised beyond the guaranteed million;
(3.) To repay arrears of interest advanced under the guarantee;
(4.) To pay 7 per cent. more, making 12 per cent. in all, on the whole capital guaranteed and unguaranteed;
(5.) The remainder to be equally divided between the Government and the Company.

In 1864 it became evident that the estimates would be greatly exceeded, and that the million would by no means suffice for the whole project, and the Company restricted their operations, for the time being, to the works above Nellore on the Pennair river.

By 1866 the guaranteed capital was nearly exhausted, none of the works were much more than half finished, and there was little prospect of their being able to raise more capital to complete them. After long correspondence the Secretary of State determined to lend the company 600,000*l.* for the completion of the canal from Sunkasala to Cuddapah; and a contract to that effect was signed in October 1866. The money was to be advanced in debentures bearing interest at 5 per cent., the principal being repayable five years after date. If by the 1st of July 1871, the canal and works were not completed, and in working order to the satisfaction of the Local Government, the Secretary of State might take possession of the works, giving the Company 5 per cent. stock to the value of their outlay.

Early in 1871 the Company applied for an extension of their guarantee to enable them to complete their original Toombuddra project; and the Secretary of State called on the Government of India for a report on the character of the works executed. That Government objected to the grant of any further assistance to the Company, but at the same time admitted that the works, although in their actual condition practically useless, were sufficiently completed to debar the Government from claiming possession on the ground of breach of contract.

In 1872 the Secretary of State warned the Company that steps would be taken for recovering the instalments of the loan of 600,000*l.* as they fell due; but he consented to defer his claims till time had been given for the passing of an Act requisite to ensure to holders of fresh debentures, which the Company were proposing to issue, the same rights as the Secretary of State held in respect of his loan of 600,000*l.* The Act was passed in 1872, and the Company, from time to time, issued debentures under it at 82*l.*, and paid off a portion of the Secretary of State's loan. It is unnecessary to enter into details regarding these debentures here; particulars as to the amount raised in 1880, when the Company's works were taken over, will be given later on.

The canal began to bring in a small revenue in 1863–4, but the working expenses exceeded the revenue in every year except during the famine of 1876–7 and 1877–8, and advances to meet the deficit were made from time to time by Government to the Company, which amounted in 1878 to Rx. 46,541. The condition of things in 1880, when the Famine Commission reported, was no better, as is described in the following extract from their report:—

"49. The Irrigation Committee have reported at considerable length on the works of the Madras Irrigation Company, and have shown the nature of the difficulties that have arisen in the management of the canal. We have given our best attention to this subject, and can only conclude that the system created under the terms of the contract between the Company and the Secretary of State, under which a divided responsibility was established, the Company's servants managing the works, while all dealings with the cultivators were placed in the hands of Government officers, is one which could not possibly succeed; and that although any really satisfactory result can now hardly be expected, the only prospect of obtaining any return whatever from the large outlay which has been incurred on the works is to be found in the complete transfer of the canal to the State on the least onerous terms that the contract will permit. From the nature of the works, water is available only for seven months in the year, and the canal flows for much of its course through a country in which the usual food grain grows perfectly well in ordinary years without irrigation. It is now easy to see that in order to introduce irrigation, a complete revolution of the agricultural habits of the country was essential; and there was but little likelihood of this being effected, unless by offering water on tempting terms, giving every assistance to the ryot in the outlay necessary for its reception, and furnishing, by means of navigation, cheap means of transport and access to a profitable mart. No one of these conditions was complied with. It was too readily assumed at the outset that the water would be taken at once, and that it would suffice to entrust the management of the revenues of the canal and the supply of the water to the ordinary district officials, in addition to their regular duties. Applications for water were to be made to the village accountant, who was to open a register and send in monthly reports. The tahsildars and revenue inspectors were to attend to the control and distribution of the water; in no case was any additional pay given for these additional duties. These arrangements were soon found to be unsatisfactory. Mutual recriminations between the officers of the Government and those of the Company soon began, and in 1878, after much discussion, a special inquiry took place, from which it appeared that the practical failure in extending the irrigation was mainly attributable to the absence of good revenue administration, unsatisfactory relations between Government officials and the officers of the Company, and antagonism between the Company and the ryots arising out of a harassing system of management.

"50. The methods of receiving applications for water, and of assessing the charges for irrigation, were greatly complained of, and there appears good reason for supposing that the rate for rice irrigation (an initial rate of three rupees per acre increasing annually up to six) was so high as to discourage irrigation. Experience has shown that of the land irrigated, half is given up after the first year, and only one-third takes water in the third year. It was obviously unwise that the Karnul canal, which has still its customers to find, should charge six rupees per acre, when the Kistna and Godavari, where irrigation is popular and well established, charge only four.

"51. The establishment charges have been very high in comparison with what they would have been on a Government work of like nature, and the London Board of Directors and its office have been an additional heavy item of expense. The maintenance of the canal has been reported to be by no means exceptionally good, yet it has, excepting in the years of great drought, cost so much that with the charges for management it has exceeded largely the income from the works, and the difference has been supplied from the Government Treasury."

The Commission accordingly came to the conclusion that a transfer to the State was the only possible remedy and they were of opinion that such a transfer would, by releasing the Government from the complications arising out of the contract with the Company, enable it to devote itself to rendering the water supply as completely and speedily useful as possible, and would offer some prospect of an improved financial position.

The Secretary of State had arrived at the same conclusion, and negotiations for taking over the works at once had already been initiated. After some official correspondence and sundry semi-official and informal negotiations between the India Office and the Company, the following terms were settled and were communicated to the Company by the Secretary of State, in November 1880, and eventually accepted by it:—

"(1.) That the transfer, and the whole of the proposed arrangements, receive the sanction of an Act of Parliament, or are otherwise carried out so as to be legally binding upon the Madras Irrigation and Canal Company and its stockholders, and also on the holders of the mortgage debentures which have been issued by the Company.

"(2.) That on the transfer being completed, the Secretary of State will, for each 100*l.* of the capital stock of the Madras Irrigation and Canal Company, pay 106*l.*; continuing up to the date of payment of the 106*l.*, but no longer, to pay interest at the rate of 5 per cent. per annum on each 100*l.* of the Company's stock.

"(3.) That, on the transfer being completed, the Secretary of State will, in redemption of the mortgage debenture debt due by the Madras Irrigation and Canal Company, pay 75*l.* for each 100*l.* of principal of the mortgage debentures, with interest at the rate of 4 per cent. per annum on each 75*l.*, from the 1st day of November 1880 until such amount of principal is paid

The 75*l.* thus paid is to be received by the holders of the mortgage debt (on their giving up their securities) as in full discharge of all claims whatsoever by them for principal and interest, and otherwise, against the Madras Irrigation and Canal Company, and in full discharge of all claims, if any, against the Secretary of State.

"(4.) That on the transfer being completed and everything done which may be reasonably required by Government, the Secretary of State will pay to the directors and chairman of the Madras Irrigation and Canal Company the sum of 12,000*l.* as compensation to their officers and clerks and to themselves for their loss of office and emoluments. No further or other compensation will be given by the Secretary of State to anyone in the service of or in any way connected with the Company.

* * * * * *

"(6.) That in case the proposed transfer be carried out, the Secretary of State will undertake the responsibility of discharging all legal expenses which he may consider to have been necessarily and properly incurred by the Company in carrying out the transfer."

In accordance with these terms the following payments were made to the Company, &c., on the transfer being completed in 1882-3:—

	£
In redemption of capital stock at 106 per cent. - - - - - - - -	1,050,979
In redemption of mortgage debentures amounting to 430,000*l.* (at 75 per cent.) and interest thereon - - -	338,433
Compensation to directors, officers, and clerks, and legal and other expenses -	14,742
	£1,404,154

The balance of the Secretary of State's loan, amounting to 358,428*l.*, was written off at the same time. The amount paid off with the money raised by the debentures was, therefore, 241,572*l.*; the debentures were issued at 82*l.* so that the money raised upon them amounted to 352,600*l.*; but part of this was appropriated to the payment of legal and other expenses connected with the issue of the debentures, and part to the payment of interest upon them. The Secretary of State, it may be noted, never received interest on his loan.

The Secretary of State raised his first 3½ per cent. sterling loan at a premium of about 4 per cent. in December 1880; it is clear, therefore, that he secured a small immediate saving by the arrangement described above. He was previously paying 50,000*l.* for guaranteed interest, and was advancing the deficits on the revenue account. At 3½ per cent. on the 1,404,154*l.* he would pay only about 49,000*l.*, while it was also believed that the revenue could be improved if the control were directly in the hands of Government.

The question whether it would be better to put off the acquisition of the works until 1888, when the Secretary of State could compulsorily take them over under the terms of the contract, was fully considered at the time; but the conclusion arrived at was that if the Company could be induced to make over the works on the above terms, this would be more advantageous to Government. In 1888 the Secretary of State would have been bound to redeem the capital at its average market value for the three preceding years; and as the value of the Indian sterling securities was rising in 1880 (witness the raising of the first 3½ per cent. sterling loan in December 1880 at a premium), there can be little doubt that by 1888 the value of the 5 per cent. guarantee on the Madras Irrigation Company's stock would have risen considerably above the 104 per cent. at which it stood in the middle of 1880, and even above the 106 per cent. at which the capital was redeemed in 1880. In further proof of this it may be noted that the market price of the 5 per cent. guaranteed stock of the Madras railway, which has never earned any surplus profits, rose from 126 in December 1880 to 145 in December 1888. Further, the Government would have been bound in 1888 to take over the liability for the debentures in full, so that their amount would have been raised to 430,000*l.* at 4 per cent.; and even if the interest had immediately been reduced to 3½ per cent., the future charge for interest would have been largely enhanced by the increased amount of the principal—430,000*l.* against 323,000*l.* The Secretary of State, therefore, obtained a direct advantage in respect of the mortgage debentures by the arrangement made in 1880, besides avoiding the risk of an enhanced price for the redemption of the capital, and securing the prospect of an improvement in the revenue account.

APPENDIX No. 32.

PROPORTION of NON-EFFECTIVE to EFFECTIVE CHARGES of the INDIAN CIVIL SERVICE (formerly called the COVENANTED CIVIL SERVICE).

Handed in by Mr. Stephen Jacob, C.S.I.

(*See* Questions 10,340 to 10,344.)

I was asked in the above-quoted questions to calculate the proportion of the non-effective to the effective charge for the Indian Civil Service, and I herewith submit the calculation which I have been able to make with the materials at my disposal.

The difficulty in making an absolutely accurate calculation arises from the fact that neither the effective charge for the service as a whole, nor the amount of the annuity subscription of 4 per cent. on salaries can be ascertained from the accounts, because, firstly, the charges are classified by departments and not by services, so that the salaries of members of the Indian Civil Service are often included in the same items as those of members of other services; and, secondly, no separate account is kept of the annuity subscriptions, since they are not credited as revenue, but are deducted from the salaries, only the net amount paid being charged to government.

I have, however, calculated the yearly salaries for 1893-4 from the Civil Lists of the various provinces, basing the calculation upon the mean of the salaries there shown for each officer on duty on two separate dates (1st April and 1st October). The actual charge for salaries for the year thus calculated may be accepted as approximately correct, since the Civil Lists are in all cases either issued or checked by the Accounts Department and are sufficiently reliable for all practical purposes.

Before giving the result of this calculation, I may premise that a somewhat similar calculation was made for the year 1877-8 in paragraph 45 of the Sixth Report of the Special Committee on reduction of home charges appointed by the Secretary of State on 27th June 1879. I quote below paragraphs 44 and 45 of that Report.

"44. The following table shows the charges for superannuation on account of Civil Servants since the 1st of April 1873:—

Presidency.	Donations to Civil Annuity Funds.	Payment of Annuities.				
	1873-4.	1874-5.	1875-6.	1876-7.	1877-8.	1878-9.
	£	£	£	£	£	£
Bengal: In India - -	100,259	106,829	93,886	32,021	22,730	50,550
England -	—	129,091	141,638	192,071	223,579	236,279
Madras: In India - -	39,423	26,406	21,753	5,140	4,434	3,843
England -	—	75,137	83,125	96,994	96,760	94,283
Bombay: In India - -	13,993	27,108	22,872	4,272	2,050	2,050
England -	—	34,637	37,028	55,209	58,778	62,150
Total - -	153,675	399,208	400,302	385,707	408,331	449,155

"45. The payment has been exceptionally increased since 1875-6 by the graduated pensions specially granted in 1876 to remove the block of promotion then existing in the North-West Provinces, a privilege subsequently extended to Bengal and Bombay; and this increase is yet further enhanced by the permission given to commute any portion of those special pensions in excess of 500*l.* per annum. Taking the payment in 1877-8 as a fair average of the present liability, it is necessary to make the two following deductions from the sum of 408,331*l.*, in order to arrive at the charge borne by the Government; first, 122,076*l.*, being the interest at 4 per cent. on the capital, amounting to 3,051,918*l.* transferred by the funds in 1874-5; and, secondly, 63,389*l.*, which, in the absence of an accurate statement, has been calculated to be about the value of the payment of 4 per cent. on their salaries contributed by the civil servants towards their pension. Making these deductions, there remains a net charge of 222,866*l.*, which, after allowance is made for the 68 smaller invalid pensions, leaves about 200,000*l.* as the cost to the Government of some 400 annuities, or an average of 500*l.* for the pension of each Covenanted Civil Servant who retires on his full annuity."

It will be observed that this calculation was made on the basis of a two-shilling rupee, that having been about the rate of exchange current in 1871, when the arrangements for taking over the annuity funds were initiated.

This calculation was not made in exactly the same form as that for which the Royal Commission has now asked, but it is easily convertible into that form. The effective charge for 1877-8 would be 1,584,725 Rx. or £, and the net non-effective charge to Government Rx. 222,866, which gives a proportion of non-effective to effective charge of 14 per cent.

The effective charge for 1893-4 calculated in the manner explained above works out at Rx. 1,575,363, and the non-effective charge is 482,923*l.* in England and Rx. 1,627 in India. Making the deductions, as in the calculation for 1877-8, of Rx. 122,076 for interest on the capital of the funds taken over by Government, and Rx. 63,015 on account of the annuity subscriptions deducted at 4 per cent. from the salaries paid, plus a further deduction of 1,779*l.* recovered from leave allowances paid in England, and taking the rupee at 2*s.*, the net non-effective charge works out at 297,680*l.* on an effective charge of 1,575,363*l.*, or about 19 per cent.

The fall in the exchange has, of course, enormously increased the burden of the non-effective charge, the annuities being payable in sterling. The exchange on the net English payments is Rx. 312,679, and including this the net pension charge to Government works out to Rx. 610,359 or nearly 39 per cent. on the effective charge.

APPENDIX No. 34.

EXPLANATORY MEMORANDUM regarding the INCREASE in the Charges for SUPERANNUATIONS and PENSIONS in INDIA and ENGLAND.

Paper put in by Mr. Stephen Jacob, C.S.I.

(*See* Question 10,480.)

The superannuation expenditure incurred in England in 1875–6, which is chargeable to India, is not distributed in the accounts in the same detail as the current charges, and I can therefore compare the charges for 1875–6 and 1893–4 under a few heads only. As, however, these are the years which have been compared in the case of the other heads of charge, it will probably be considered desirable that I should make the same comparison here also. At the same time, however, it must be admitted that there is no special virtue in this particular comparison; and I shall accordingly explain the increase in some of the heads by comparing the details of some later year (the earliest for which full details are available) with those of 1893–4.

The charges of 1875–6 and 1893–4 are compared in such detail as is possible in the table which follows:—

	1875-6.				1893–4.				Increase in 1893–4 over 1875–6. (Increase in Charge or Decrease in Receipts +; Increase in Receipts or Decrease in Charge –.)			
	India.	England.	Exchange.	Total.	India.	England.	Exchange.	Total.	India.	England.	Exchange.	Total.
	Rx.	£	Rx.	Rx.	Rx.	£	Rx.	Rx.	Rx.	£	Rx.	Rx.

* Including a few small funds, separate details of which are not available in the earlier years.

The charges and recoveries shown under the head of Civil, Military, and Naval Funds appertain to various funds which have either been taken over by Government, with all assets and liabilities, or been instituted by Government, and it will be seen that these funds account for Rx. 1,427,250, or just about two-thirds of

the total net increase of Rx. 2,119,266 under this head. Of this amount Rx. 790,511 occurs under the head of Exchange, leaving a balance of Rx. 636,739 due chiefly to smaller receipts in India and higher charges in England. These funds are entirely independent of each other, and the increases or decreases must accordingly be explained separately.

Military Funds.

These funds are four in number, namely, Bengal, Madras, and Bombay Military Funds, and the Bengal Military Orphan Society.

In 1861, when the local army for India was discontinued, and the Staff Corps was organised, the Secretary of State announced that Government would assume the liabilities of these military funds, as far as might be necessary to maintain existing pensions and to secure to subscribers and their families the benefits to which they were entitled under the former system, the assets also being taken over, and subscriptions at the existing rates being continued. The formal consent of the subscribers having been obtained to this arrangement, the requisite powers were conferred by Act 29 Vict. c. 18, and the transfer was finally effected on the 10th September 1866.

The capital of the funds at that date was as follows:—

	Rx.
Bengal Military Fund	688,927
Madras Military Fund	1,211,611
Bombay Military Fund	712,578
Bengal Military Orphan Fund	557,082
	3,170,198

The securities composing this capital were taken over and cancelled, and the above amount was held on the Government books as a deposit not bearing interest, and was transferred year by year to the Revenue Account, to such extent as was required to meet the net charge for pensions *minus* subscriptions, until each fund was exhausted. The reason for thus treating the capital was that the pensions were expected to increase for some years, and the intention was that the capital should be devoted to relieving the charge on the revenues when the burden would be greatest. The capital was, however, absorbed long before the pensions had reached their maximum figure, the year of exhaustion for each fund being as follows, while the pensions are still increasing and the subscriptions decreasing:—

Bengal Military Fund	1874–75
Madras Military Fund	1879–80
Bombay Military Fund	1879–80
Bengal Military Orphan Society	1888–89

Until 1879–80 there was no net charge on the accounts for either the Madras or Bombay Fund, and until 1888–9 there was none for the Bengal Military Orphan Society. In 1875–6 the net charge appearing in the accounts was for the Bengal Military Fund only. The Military Fund charges are now shown in a single item in the accounts, but the following table compares the net charges for 1875–6 and 1893–4 in such detail as is available, and shows to what extent the appropriations from capital operated to reduce the net charge in the earlier year.

	1875–6.			1893–4.			Increase in Charge.

Net charge on accounts	*−329,445*	420,225	90,780						

Apart, therefore, from the appropriations from capital and the higher charge due to the fall in the exchange value of the rupee, the net charge has increased by only Rx. 212,916, of which Rx. 153,404 is due to the lower receipts from subscriptions (the fund having been closed to new subscribers and the old subscribers having diminished by deaths), and only Rx. 59,512 to increased charges for pensions.

The net charge, excluding exchange and appropriations from capital, for each year from 1875–6 to 1893–4, is shown below.

NET CHARGE on account of MILITARY FUNDS, excluding Exchange and Appropriations from Capital.

Year.	Rx.	Year.	Rx.
1875–6	284,535	1885–6	399,252
1876–7	299,253	1886–7	416,847
1877–8	300,712	1887–8	422,246
1878–9	315,653	1888–9	432,481
1879–80	321,339	1889–90	445,375
1880–1	351,294	1890–1	466,016
1881–2	357,528	1891–2	481,844
1882–3	378,826	1892–3	486,510
1883–4	391,108	1893–4	497,451
1884–5	405,769		

These amounts do not, however, represent the burden to the State on account of the funds; they should certainly be reduced by 4 per cent. on the capital, or say Rx. 126,808. In this connection I cannot do better than quote the 40th paragraph of the Sixth Report of the Special Committee on Home Charges, dated 3rd May 1880.

"40. In speaking of the charges of the military and medical funds, which now amount approximately to 400,000*l.* a year, as an expense to be borne by the revenues of India, it must be remembered that this burden is by no means entirely the result of the transfer of the funds to the Government. According to a return laid before Parliament, the contributions made by the Government, in one form or other, to the military and medical funds, as long ago as 1850–1, amounted to 132,000*l.* a year, and, owing to the great increase of capital on which interest was paid to some of the funds, this sum must have been largely exceeded, even in 1866, when the management of the military funds was assumed. Again, after the mutiny, the Government agreed to bear the additional cost of the pensions arising from the special casualties of that period, estimated to be about three-fourths of the pensions of widows of all officers killed between May 1857 and May 1858, but no complete computation seems to have been made of the amount of this liability when the funds were transferred, and it cannot be stated by what precise sum the cost of the pensions was enhanced by this promise. The more rapid promotion under the Staff Corps regulations is another cause of expense, which has arisen from measures taken on Imperial grounds of policy, and cannot fairly be charged against the funds. And, finally, had not their management been assumed, the payments on account of what is termed 'difference of exchange' would in recent years have been much heavier. It should further be noticed that, when the liabilities connected with these funds have been discharged, no fresh expenditure of this nature will arise in the future, as the new service fund which replaces them is constituted on a strictly self-supporting basis, and no contribution is given by the State, the interest allowed on the capital being fixed at the ordinary market rate."

As already stated, the net charge is still increasing, but it is now approaching its maximum; it will in a few years begin to diminish, and will eventually disappear altogether from the Government accounts.

MEDICAL RETIRING FUNDS.

These funds, like the military funds, were injured by the measures adopted in 1861, appointments to the Indian medical service having for the time being ceased, and their assets and liabilities were accordingly assumed by the Government under powers given by the Act 29 Vict. c. 18. The capital transferred, the year of transfer, and the year of exhaustion of the capital, which was at first dealt with in the same manner as that of the military funds, are given below.

Name of Fund.	Year of Assumption.	Amount of Capital.	Year of Exhaustion.
		Rx.	
Bengal	1868	338,457	1875–76
Madras	1870	650,094	1879–80
Bombay	1868	124,273	1878–79

In 1874 the junior members of the Bengal fund were allowed a refund of their subscriptions, on renouncing their claim to annuities from the fund, and the offer was repeated in 1881. The same course was adopted with regard to the Bombay fund in 1877. These two are rapidly dying out. The Madras fund includes a charity branch, which provides for widows and children, and the net charge for it does not yet show any reduction.

There is little use in comparing the net charges for 1875–6 and 1893–4, because in the former year there was an unusually large charge for the refunds to the junior members, while there was also a credit of Rx. 219,872 on account of appropriations from capital.

The following table shows the net charge (excluding exchange) for each fund from 1880–1 (the year in which the credits from capital entirely ceased) to 1893–4.

NET CHARGE OF MEDICAL RETIRING FUNDS.

Year.	Bengal.	Madras.	Bombay.	Total.
	Rx.	Rx.	Rx.	Rx.
1880–1	43,486	73,154	11,541	128,181
1881–2	*134,917	73,261	11,769	219,947
1882–3	*52,829	74,256	11,092	138,177
1883–4	45,034	75,814	10,009	130,857
1884–5	42,942	78,474	9,471	130,887
1885–6	39,606	78,565	9,530	127,701
1886–7	38,199	80,965	9,335	128,499
1887–8	36,164	82,564	8,713	127,441
1888–9	35,285	84,349	7,889	127,523
1889–90	33,306	84,620	7,747	125,673
1890–1	30,210	84,646	6,980	121,836
1891–2	28,339	82,892	6,842	118,073
1892–3	31,036	86,244	7,436	124,716
1893–4	25,517	78,210	6,159	109,886

This charge will eventually disappear from the Government Accounts.

The true burden to the State is considerably less than that which appears on the face of the accounts. After allowing for the refunds made to the junior members of the Bengal and Bombay funds, the credit for interest at 4 per cent. would be about Rx. 34,000.

* Special refunds were made in these two years to junior members renouncing their claim to annuities.

Civil Service Annuity Funds.

The history of these funds up to the time of their being taken over by Government is given briefly in a note by Mr. Seccombe printed as Appendix No. 29 (p. 710) to the Report of the Select Committee for 1872.

Before the funds were taken over the Secretary of State had determined that every Indian civil servant on retirement after 25 years' service and 21 years' residence should be granted a pension of 1,000*l.* per annum, the annuity deduction of 4 per cent. from salary continuing to be made. This decision rendered unnecessary the further maintenance of the machinery of the annuity funds, and the Secretary of State accordingly directed their abolition. The subscribers having agreed to surrender their accumulated capital to Government on its accepting their liabilities, power to take over the funds was conferred on the Secretary of State by Act 37 Vict. c. 12, and the capital, as below, was taken over in 1874–5, and credited as an extraordinary receipt.

	Rx.
Bengal - - -	2,030,264
Madras - - -	583,277
Bombay - - -	438,458
Total - -	3,051,999*

This method of dealing with the capital differed from that adopted in the case of the military and medical funds, for reasons which are explained in the following quotation from the Sixth Report of the Committee on Home Charges already referred to.

"43. It will be observed that this mode of bringing the assets to account is different from that adopted with regard to the military and medical funds. In both cases the proposals of the Government of India were accepted, and the acceptance is based, in a memorandum written by the Financial Secretary in 1871, on the different circumstances of the funds. The pensions from the military and medical funds would gradually decrease, and the capital would be devoted to relieving the charge on the revenues at the time when the burden was greatest. The civil annuities on the other hand were a permanent, and for some thirty years an increasing charge, so that the exclusion of the amount from the accounts at present, and its inclusion hereafter when it would be even larger, would have disturbed the accounts in a very inconvenient manner."

The 4 per cent. deductions from salaries are taken by actual deduction from the charge; there is, therefore, no separate credit on their account except in the Home accounts, where a different procedure is followed.

Of the total increased charge of Rx. 368,519 on account of these funds, Rx. 284,143 is due to the fall in the exchange value of the rupee. The increase in the value of the annuities at two shillings to the rupee is therefore only Rx. 84,376. It was, of course, understood from the first that the grant of a pension of 1,000*l.* a year to every Indian civilian would increase the charge for these pensions. The charge is still increasing, but the maximum has probably been nearly reached.

The actual burden to the State for these pensions is less than that shown on the face of the accounts, as it should be reduced by the interest on the capital taken over by Government, and by the amount of the annuity deductions. Government paid to the annuity funds 6 per cent. on their capital, and at that rate the interest saved would be about Rx. 183,000; even at 4 per cent. the interest would be Rx. 122,000. The annuity deductions do not vary much and may be taken at about Rx. 63,000 a year. The net charge as shown on the accounts should therefore be reduced by at least Rx. 185,000, and possibly by Rx. 246,000.

Subject to this explanation, I give below the net charge for these annuities for each year from 1875–6 to 1893–4, on the basis of a two-shilling rupee; and it must be remembered that, when the arrangements for taking over these funds were initiated, the exchange value of the rupee approximated to two shillings. The funds were also entitled to a privileged rate of exchange.

Year.	England.	India.	Total.
	Rx.	Rx.	Rx.
1875–6 - -	259,884	138,511	398,395

Civil Funds.

These funds, by which provision is made for the families of deceased Indian civil servants, were entitled to privileged rates of interest and of exchange from Government, and with these privileges they were self-supporting. They were taken over by the Government under authority of 45 & 46 Vict., cap. 45, the liabilities assumed being such as it was actuarially shown that the assets, including future subscriptions at existing rates,§ were sufficient to meet.

The Bombay fund was taken over in 1882–3, and the Bengal and Madras Funds in 1885–6, the capital, as below, being credited to Government as an extraordinary receipt.

	Rx.
Bombay - - - - - - -	815,345
Bengal - - - -	1,908,469
Madras - - - - - -	2,257,000
	4,980,814

The funds were in 1881 closed to new entrants, a new fund on less privileged terms being opened for future members of the Indian Civil Service.

The charges on account of these funds, which appeared in the Government accounts in 1875–6, were for the donations given to the funds as the equivalent of the privileges mentioned above.

Comparing the accounts of 1875–6 and 1893–4, the charge to Government appears to have increased by Rx. 229,713; but of this increase exchange accounts for Rx. 156,000. If, however, credit be taken for 4 per cent. on the capital of the funds taken over by Government, which would amount to Rx. 199,233, the increased charge even including this huge fall in exchange, would be reduced to about Rx. 30,000; therefore, but for the fall in exchange, the net charge to Government would show a large reduction.

The following account shows for each year the net charge to Government, excluding exchange and allowing for interest as above, for each year from 1875–6 to 1893–4.‖

* The actual amount credited was Rx. 3,051,918, which differs slightly from this aggregate of the details.

* Increase due to grant of special graduated pensions to remove the block of promotion in the N.W.P., which was further exhanced by the permission given to commute for a capital sum any portion of those pensions in excess of 500*l.*

† Increase due to exceptionally numerous retirements, the recruitment in various provinces for the year 1861, and for two or three years after having been unusually high.

‡ The enhancement in this year is due to the introduction of the system of monthly payment of pensions and annuities.

§ The rates of subscription (which vary for the three funds), &c., are detailed in Appendix 10 to the Civil Service Regulations. The subscription is payable by all members of the service, but that of married members is fixed at a higher percentage; and an additional percentage is levied for each child.

‖ I include in this account the item of revenue shown separately in the Government accounts under the head of "Family Subscriptions of Native Members of the Indian Civil Service." This item relates to six Native members of the Indian Civil Service who could not, for technical reasons, be admitted to the Civil funds, but, being bound by their covenants with Government to subscribe to those funds, were, before the funds were taken over by Government, allowed, on payment of equal subscriptions, to secure like benefits to those which the civil funds secure to European members (Civil Service Regulations, Article 617). Since the funds were taken over, the position of these native members differs in no way from that of the European members of the service.

	Net Charge on Accounts excluding Exchange.	Credit on Account of Interest at 4 per cent. on Capital taken over by Government.	Net charge to Government.
	Rx.	Rx.	Rx.
1875–6	113,955	—	113,955
1876–7	125,899	—	125,899
1877–8	119,349	—	119,349
1878–9	138,020	—	138,020
1879–80	139,160	—	139,160
1880–1	146,267	—	146,267
1881–2	152,370	—	152,370
1882–3	168,182	—	168,182
1883–4	151,090*	*32,614**	118,476*
1884–5	168,329	*32,614*	135,715
1885–6	359,752†	*199,232*	160,520
1886–7	143,498	*199,232*	*−55,734*
1887–8	150,360	*199,232*	*−48,872*
1888–9	155,009	*199,232*	*−44,223*
1889–90	159,877	*199,232*	*−39,355*
1890–1	166,159	*199,232*	*−33,073*
1891–2	176,574	*199,232*	*−22,658*
1892–3	183,532	*199,232*	*−15,700*
1893–4	187,440	*199,232*	*−11,792*

It will be seen that the net charge to Government was rapidly increasing before these funds were taken over, owing to the rapid accumulation of capital and the consequent heavy charge for the privileged interest. Since the three funds were taken over, there has so far been a net receipt, allowing for the saving in interest at 4 per cent. only (and leaving exchange out of account). The charges will, however, continue to increase for some years, but there can be no doubt that the taking over of the funds and their closing to new entrants in 1881 has resulted and will result in a considerable saving to Government. The charge will, after some years, begin to diminish, and will eventually disappear.

Old Madras Civil Funds.

These were payments on account of two funds instituted in 1800 and 1814 by the Madras Civil Service, for the liabilities of which Government became responsible on the institution of the Civil Service annuity funds. In 1875–6 the liabilities were reduced to four annuities, and the charge on account of these old funds ceased altogether in 1880–1, when the last annuitant died.

Civil Service Family Pension Fund.

This is the fund which was instituted, as stated above, on the closing in 1881 of the civil funds to new entrants, in order to provide pensions for the families of Indian civilians appointed in subsequent years. In the case of this fund the Government affords some assistance, but the maximum limit of such assistance has been fixed at 35,000*l.* a year, and, with a view to ensuring the observance of this condition, an actuarial valuation of the fund is effected periodically, and it has been specifically declared that the rates of subscription‡ are liable to alteration from time to time. The last valuation was effected in 1893, and showed a surplus of 26,716*l.*, which represented over 23¾ per cent. of the value of the liabilities; the sterling rates of subscription were accordingly reduced. The Indian subscriptions are recovered at the official rate of exchange of the year. Interest has, hitherto, been taken at 4½ per cent. for the purposes of the valuation; but the Secretary of State announced, when communicating the last report, that the rate to be adopted on the next occasion will depend upon a consideration of the market rates of the day. It is not intended that the pensions provided by these regulations should bring any charge on the Government of India, beyond the prescribed Government contribution, and accordingly no privileges are to be allowed to the fund in the way of a favourable rate either of interest or exchange. At present the receipts are far in excess of the charges. The following table gives the receipts and charges of the fund (excluding exchange) for each year, up to 1893–4, since its institution.

	Receipts.		Charges.	
	India.	England.	India.	England.
	Rx.	£

Indian Navy Fund.

The assets of this fund (capital 114,624*l.*) and its liabilities were assumed by the Secretary of State after the abolition of the Indian Navy in 1863. The net charge has reached its maximum, and is already showing a tendency to diminish. It will eventually disappear from the Government accounts. The following table shows the net payments in India and England and the total (excluding exchange) from 1875–6 to 1893–4.

	India.	England.	Total.
	Rx.	£	
1875–6	*−112*	8,404	8,292

1893–4	*−8*	15,430	15,422

Other Pensions.

In the case of these pensions, which are of numerous kinds, it is not generally of importance to bring together the charges incurred in India and in England. The former relate almost exclusively to pensioned Natives of India; there are, indeed, a few Europeans who, for special reasons, draw their pensions in India; but the amount of such pensions is proportionately so small that it may be disregarded. The pension charges in England consist of those granted to Europeans either for service out of India, chiefly home service (either at the India Office or under the late East India Company), or for service in India other than service in the Army or in the Indian (formerly Covenanted) Civil Service. I propose, therefore, to treat the charges in England and in India separately for the most part.

The Indian charges can be compared in detail for the whole of the period from 1875–6 to 1893–4, and this comparison is effected in the table below.

* Bombay Civil Fund taken over.
† Bengal Madras Civil Funds taken over.
‡ Details of the rates, which vary with the length of service, are given in Appendix 10 of the Civil Service Regulations.

Year.	Superannuation, Invalid, and Retired Pensions.	Gratuities.	Compassionate Allowances.	Pensions for Distinguished and Meritorious Services.	Marine Pensions and Gratuities.	Refunds and Miscellaneous.	Total Gross Charge.	Contributions for Pensions, &c.	Net Charge.

* Enhanced by the special bonuses granted to P.W. officers to induce them to retire with a view to the reduction of their numbers.
† Shown under the head of "Marine" for these years; though not included in the totals for this head, they are given here for comparison with the figures of later years.
‡ Investment in Government securities of the balance of a local pension fund.
§ Including Upper Burma charges, which were unclassified for these years.

The superannuation, invalid, and retired pensions have increased steadily from year to year and are still increasing.

The main causes of this increase are the comparatively recent introduction of the pension system into India, and the large increase in the staff of officials employed for the Civil Administration in all its branches. Other causes contributing in a less degree to the enhancement of the pension charges are the increased employment of Government officials in foreign service, either under Native States or Local Funds, against which the increased recoveries, consisting almost entirely of the contributions levied for the loan of their services, affords a complete set-off, and an alteration in the pension rules, introduced in 1888, by which invalid and superannuation pensions are granted for a minimum service of 10 years instead of 15 years. This last alteration accounts for the decrease in the amount of the gratuities, which forms a partial set-off against the increase in pensions.

Compassionate allowances have largely decreased; they are composed partly of special pensions granted to the families of officers killed in the Mutiny, and these pensions have, of course, for the most part died out. The large decrease in 1886-7 was owing to the cessation of a large number of miscellaneous allowances in Bombay.

The other charges do not require any explanations beyond those given in the foot-notes to the table.

The English charges cannot, as already stated, be compared in detail for the whole of the period from 1875-6 to 1893-4; but the following table indicates the progress of the total charges in England, other than those relating to the principal funds mentioned above, for that period:—

——	Gross Charges.	Recoveries.	Net Charge.
1875-6	281,162	*12,135*	269,027
1876-7	262,557	*12,050*	250,507
1877-8	265,090	*13,509*	251,581
1878-9	271,807	*8,234*	263,573
1879-80	269,559	*10,592*	258,967
1880-1	305,748	*10,974*	294,774
1881-2	265,190	*11,034*	254,156
1882-3	251,541	*9,808*	241,733
1883-4	255,370	*9,601*	245,769
1884-5	251,993	*9,785*	242,208
1885-6	255,012	*11,496*	243,516
1886-7	232,745	*11,299*	221,446
1887-8	250,867	*10,972*	239,895
1888-9	248,822	*12,656*	236,166
1889-90	248,138	*10,163*	237,975
1890-1	270,842	*9,916*	260,926
1891-2	300,918	*9,852*	291,066
1892-3	337,735	*9,708*	328,027
1893-4	339,540	*9,610*	329,930

It will be observed that, while there has been an increase of Rx. 61,000 in the total net charge as between 1875-6 and 1893-4, that charge showed a slight tendency to decrease till the year 1889-90, when it had fallen to Rx. 238,000. The increase, therefore, is due to the rise in the last four years. This increase will be explained in detail below, and it is only necessary here to remark that it is due almost entirely to the increased charge for the pensions of the Uncovenanted Service in India.

It has already been explained that for the earlier years of the period covered by the preceding table full details are not available in the Home accounts. Some additional details were published in the Home accounts of 1878-9, but full details were not given till 1881-2. I propose, therefore, to give the detailed figures for the period from 1881-2 to 1893-4, and as the total for 1881-2 differs but slightly from (and, in as far as it does differ, is less than that of 1875-6, the comparison of the figures for this period will probably be considered sufficient.

The following table gives the details:—

CLASS.	1881-2.	1882-3.	1883-4.	1884-5.	1885-6.	1886-7.	1887-8.	1888-9.	1889-90.	1890-1.	1891-2.	1892-3.	1893-4.

* From 1881-82 to 1884-5, Home Establishment officers pensioned between 1834 and 1858 are included under India Office.
† Reduction owing to date of payment being changed from 31st March to 1st April, which deferred the charge for one quarter till the following year.
‡ Donation to the Fund: in 1885-86 the liabilities and assets were assumed.
§ Included above, under Superannuation.
‖ Including 4,343*l.* paid for commutation of pensions.
¶ Enhanced by nearly two months' payments, owing to the change from quarterly to monthly payments in the course of this year.

The pensions for distinguished and meritorious services are granted generally to the relations of high officers (deceased) who have rendered special services to the State. They have varied but little.

The India Office pensions have fallen considerably since 1881–2. They then amounted (including the East India Company's home establishment, pensioned between 1834 and 1858) to 55,903*l.*, the corresponding figure in 1891–2 being 37,881*l.*; and in 1893–4, 43,923*l.* The charges in the earlier year were swelled by compensation pensions granted in respect of various reductions effected on and after the amalgamation of the staffs of the East India House and India Board. The small increase in these pensions since 1890–1 is due to a reorganisation of the Accountant-General's Department, second-class clerks having been substituted for more highly-paid clerks. The increase in the superannuation pensions since 1891–2 was caused by compulsory retirements from age. All members of the Home Establishment appointed after the 2nd of September 1858 are subject to the provisions of the Superannuation Act for the time being in force. The India Office compassionate pensions are chiefly grants to artisans, labourers, &c., retiring after long periods of service without strict claims to pension.

The High Court Judges' pensions work out to an average of about 30,000*l.* for the 13 years. These pensions are dealt with in a separate note (Appendix 33), and there is no need to discuss them further here.

The Straits Settlement judicial officers were pensioned by the East India Company. Only one of these remains now on the pension list.

The pensions included under the head of "Uncovenanted Service" are those of European officers employed in all services other than the military service, the Indian Civil Service, and those separately mentioned here.

The sterling amounts shown in the table rose gradually from 1881–2 to 1884–5; they then remained fairly stationary up to 1888–9; rising slightly in 1889–90, and by leaps and bounds from 1890–1 onwards; the amount of the pensions paid in 1893–4 being rather more than double those paid in 1889–90. It must, however, be remembered that practically the whole of these pensions* are granted in rupees, and that up to and including the year 1889–90 they were, when paid in England, converted into sterling at the official rate of exchange of the year; while from 1890–1 onwards they have been paid at a fixed rate of exchange, 1*s.* 9*d.* For the earlier period the official rate of exchange generally fell from year to year (following the market rate), and the gradual rise in the rupee amount of the pensions was thus obscured in the sterling accounts by the gradual fall in the rate of conversion. From 1890–1, the rate of conversion being fixed at a much higher rate than that previously prevailing, the rise in the sterling amount in that year was much more than proportionate to the enhancement in the rupee amount of the pensions, while since that year the rise is proportionate to that of the rupee pensions.

To show, therefore, the true progress of the account, I give the following tables, which show from year to year, in addition to the sterling amounts shown in the Home accounts,

(1) The corresponding rupee amounts;
(2) The sterling amounts at the official rate throughout (*i.e.*, altering the sterling amounts from 1890–1 to 1893–4);
(3) The sterling amounts at the rate of 1s. 9*d.* throughout (*i.e.*, altering the sterling amounts from 1881–2 to 1893–4);
(4) The official rate of exchange.

* Omitted owing to the irregular payments in these years as indicated in the foot-note to the table preceding this one.

The rupee amounts, it will be seen, rose steadily up to 1889–90, the total increase from 1881–2 to 1889–90 being about Rx. 43,000, or about Rx. 5,500 a year. The yearly increment, however, showed a tendency to rise towards the latter part of this period, and the normal yearly amount at the end of the period may be taken at about Rx. 10,000. From 1889–90 to 1893–4, however, the rise has been at a much more rapid rate, the total increase for the four years being about Rx. 81,000, or say Rx. 20,000 a year. The rate of increment has, therefore, quite doubled. From these figures it would seem that the enhanced rate of exchange has had a double effect in raising the cost of these pensions, namely, first, the direct effect of raising the sterling amount payable; and second, the indirect effect of stimulating retirements on pension, and transfers of rupee pensions from India to England. As to the increased number of pensioners payable in England, since the change was carried out, there can be no doubt, for the pension list under this head at the India Office included 649 names in 1893–4, against 449 in 1889–90, or an increase of 200 in four years; while the increase in the number of pensions between 1881–2 and 1889–90 was only 136 (449–313) in eight years. A small portion of the abnormally increased charge in the last few years is due to exceptional retirements in the Public Works Department, but the bulk of it may with confidence be attributed either directly or indirectly to the enhanced rate of exchange at which rupee pensions have been payable in England since 1890–1.

The two lower sterling lines in the table show the extent of the direct effect of the rise in this rate. In 1893–4 the official rate had fallen to 1*s.* 2¾*d.*, and if the actual pensions then payable (enhanced though they were by the stimulus to retirements mentioned above) had been paid at this rate of exchange the sterling amount would have been 125,764*l.* as against 185,336*l.* actually paid, the saving being nearly 60,000*l.*, and the rise as between 1891–2 and 1893–4 would have entirely disappeared. Had the rate of increment of Rx. 10,000 continued from 1889–90 to 1893–4, the sterling amount paid at the official rate of exchange would have been about 105,000*l.* only.

The pensions of the Bengal Pilot Service have fallen from 9,030*l.* in 1881–2 to 6,825*l.* in 1893–4. The individual pensions for this service are small; retiring pensions of Rs. 200 a month to a Branch pilot, and Rs. 100 to any of lower rank, are granted after an actual service of 30 years.

The Marine Service pensions are granted under new regulations applying to the service as reorganised in 1883–4; the service being comparatively new, the pension list is necessarily growing.

The pensions of officers of the East India Company's establishments are gradually falling in. They consist mainly of the Indian Navy pensions granted on the abolition of that service in 1862; these are falling in less rapidly than the others, but they also will gradually disappear, and counterbalance the increase in the pensions of the Royal Indian Marine; they fell to 15,867*l.* in 1894–5.

The Home Service Family Funds are two old funds established in 1818 and 1820. The East India Company

* A few are fixed in sterling, but their number is so small that they may be treated as a negligible quantity.

assumed the liability for any deficiency in them in 1834, when the commercial business of the Company was terminated, and they were closed to new entrants in 1860. The net charge for these funds is gradually diminishing and will eventually disappear.

The India Office Provident Fund was started in 1877, those members of the old fund, who so desired, being permitted to join the new fund, with a proportionate share of the capital. It was closed to new entrants in 1885, when those subscribers who pleased were allowed to withdraw and receive back their subscriptions, and the Secretary of State assumed the liability for the charges. From that year to 1890–1 the subscriptions exceeded the pensions payable, but there is now a net charge the tendency of which will be to increase for some years, as the pensions still further increase and the subscriptions decrease. In 1893–4 the pensions amounted to 1,896*l.* and the subscriptions to 1,426*l.* In 1894–5 the net charge was 861*l.* (pension, 2276*l.* and subscriptions 1,415*l.*)

The Bengal Pilot Service has a family fund, the subscriptions to which are levied and credited in India. The charge in England shows a slight tendency to increase, but it has risen less than 1,000*l.* in twelve years.

The compassionate and miscellaneous pensions have not varied materially since 1882-3, and require no remarks.

Gratuities payable to uncovenanted servants retiring on medical certificate (before title to pension has accrued) are ordinarily payable in India; and only under exceptional circumstances are they paid in England. The exceptions have been considerably reduced in recent years. The other gratuities are granted under special orders, and are usually small in amount. The charges for relief of distressed natives of India consist mainly of the expenses for sending back to India destitute native seamen, where the responsibility cannot be brought home to the owners of the vessels in which they left India. These expenses the Government of India is bound to defray under the Merchant Shipping Act, so that the charges, which are never large, are for the most part incurred under legal obligation. Of the expenditure in 1893–4, amounting to 165*l.*, charges of the above nature account for 150*l.*, the balance of 15*l.* having been incurred for the repayment of the charges paid by Her Majesty's Consul at Marseilles for the relief of four destitute Indians (eye-doctors).

The subscriptions to societies have been unvaried for several years. They are as follows:—

	£
Strangers' Home for Asiatics - -	200
Seamen's Hospital Society - -	105
Soldiers' Daughters' Home - -	50
	355

APPENDIX No. 35.

PRÉCIS of CORRESPONDENCE relating to the LOCAL SUPPLY of STORES required by GOVERNMENT DEPARTMENTS in INDIA.

Handed in by Sir Henry Waterfield, K.C.S.I., C.B.

(With reference to Q. 12,706.)

In the despatch quoted in the margin* the Secretary of State in Council requested that the growing practice of obtaining stores of English manufacture otherwise than through the Stores Department might be checked.

In 1876 a Committee was appointed to inquire into the functions and administration of the Lambeth branch of the Stores Department.

The Committee expressed the opinion that the Government of India and the Local Governments and Administrations might in future be allowed to exercise their discretion as to the agency through which supplies of all sorts might be obtained, subject to certain exceptions and certain conditions as to payment and inspection. The objects the Committee had in view were:—

(1.) The reduction of the payments for stores in this country.
(2.) The encouragement of Indian manufactures, and of a system of local agency for supplies not of Indian origin.

The introduction of the principle of provincial responsibility for local expenditure, in the opinion of the Committee, justified the proposed change of system. The exceptions were engineering, railway, and telegraph plant and materials; malt liquor; clothing for European troops; military supplies, and generally any stores of a special character or of which large stocks were required.

These recommendations† were approved by the Secretary of State in Council, who requested the Government of India to give orders accordingly.

The Government of India, in 1878,‡ forwarded a copy of the orders given on the subject. These were generally in accordance with the instructions from home. The division made was as follows:—

A. Stores to be obtained through India Office:—
Special machinery and appliances.
Railway, telegraph, and engineering plant and materials.
Malt liquor (other than hill beer).
Clothing materials for European troops.
Military stores of a special character.
Marine " " "
Writing paper. Loan and water-marked paper.
Stamps.
Medicines, but with liberty to Local Governments to buy in local markets medicines paid for from provincial funds.

B. Stores to be obtained by local purchase or direct from Europe or America from manufacturers or through private agents,—
Books. Newspapers. Periodicals.
Type and printing materials.
Stationery, other than writing paper.
All other civil stores.

The rest of the order was concerned with the conditions as to inspection and payment to be observed in local purchase, the method of payment, and the financial arrangements necessitated.

In acknowledging the receipt of the above communication* the Secretary of State in Council remarked that the resolution was in general accordance with the views expressed in Lord Salisbury's Despatch, No. 477 of 1876. The substitution of Bally Mills for European paper was noted with satisfaction. The desirability of effecting such substitutions was urged, even at some temporary increase of cost. As regards stores not produced in India, the practice of dealing with merchants or agents on the spot should be adopted, rather than that of issuing direct orders for the supplies to persons in England. When supplies could not be obtained from Europe through local agency, to be paid for in rupees, they should be indented for as usual.

The Government of India objected to this restriction† on the ground that the intervention of local agency must often needlessly add to the cost of supplies, and

* Financial Despatch to India, No. 94, dated 13th March 1879.
† India Finance and Commerce Letter, No. 288, dated 8th September 1879.

that the condition of payment in India would not really obviate foreign remittances or reduce competition with the Secretary of State's bills.

Two other communications were received in 1879,* one stating that railway plant and materials had by a subsequent order of the Government of India been omitted from the list of stores to be obtained through the India Office; the other requesting that the annual return of local purchases, which had been called for by the Secretary of State, might be dispensed with.†

General Hyde, then Inspecting Engineer for State Railways, &c., in a report dated 27th January 1880,‡ stated the objections to local purchase of railway plant and material, except such articles as were to be found in the general trade of the country, and the Director-General of Stores, dealing with the whole subject in his report of 31st January 1880,§ urged that the whole question should be reconsidered with a view to the restriction of local purchase to articles actually produced in India or found in the general trade of the country, of quality and price comparing favourably with purchases through this office. The Financial Secretary,‖ however, pointed out that the Committee had apparently contemplated some additional expense at the outset in fostering local industry, and, deprecating the reopening of the whole question at that time, recommended that stores needing inspection during manufacture should invariably be obtained through this office, and that stores not obtainable locally should be indented for from this office according to the rule.¶ This view was approved by the Secretary of State in Council, who in his despatch to the Government of India requested that orders might be issued directing that, when stores were of such a nature that they had to be purchased in England, there should be no departure from the system of forwarding an indent on the Stores Department, and that the purchase in the local market of such special stores as railway plant and material be limited to articles usually procurable in the local market, and be not extended to purchases in England either directly or through agents. The Government of India were at the same time requested to again announce their wish to give the utmost encouragement consistent with true economy to the supply of articles by the local market. The request for the annual return was also repeated.

The Government of India issued orders carrying out the wishes of the Secretary of State in Council in their resolution of 3rd November 1880,** and again in more detail in resolution dated 10th January 1883.†† These orders were approved by the Secretary of State in Council,‡‡ and are practically those now in force. They are in substance as follows:—

All stores required for the public service which cannot be manufactured in India are, as an almost invariable rule, to be obtained by indenting on the Secretary of State.

Stores of European manufacture must not be bought in India, or obtained direct from Europe, independently of the India Office. The special cases in which, with the previous sanction of the Government of India or the Local Government this rule may be departed from are:—

1. When it may be more economical to do so.
2. To prevent inconvenience to the public service when stores have not arrived from England.
3. When the articles are perishable.

The resolution further prescribed rules for the—

(*a.*) Preparation and forwarding of indents.

(*b.*) The procedure to be observed in obtaining books, newspapers, &c., independently of the India Office.

(*c.*) The preparation of annual estimates of stores required from England.

(*d.*) The preparation of the annual return called for by the Secretary of State, showing the extent to which local purchase had been resorted to.

With regard to the encouragement of local industry, the Resolution (paragraph 28) impressed on Local Governments the desirability of substituting articles of *bonâ fide* local manufacture for similar articles obtained from Europe, adding that, where articles of European and of Indian manufacture did not differ materially in price and quality, preference should be given to the latter. This was held to apply to articles produced or worked up in India from imported material. And finally it was pointed out that there were many articles which might not be immediately obtained in the local market, but which could be made in the event of the Government encouraging the manufacture.

The despatches noted in the margin* dealt with the annual returns, and, pointing out instances in which the rules as to local purchase had been infringed, requested a stricter observance of them.

In 1886 the Indian Finance Committee investigated the question of local purchase of imported stores. The Government of India, in forwarding a copy of their note,† remarked that they were satisfied that European stores could be obtained through the Stores Department at a smaller cost than through any other agency, yet that the local purchase of such stores was large and increasing, and undoubtedly attended with a heavy loss to Government. The plea of urgency must, they considered, be held to justify some of these purchases, but they were too numerous, and the principal cause of the excess was the dilatoriness of the Stores Department in the execution of indents. A criticism of the procedure of the Stores Department and its relation to the Government of India followed, with suggestions as to its improvement. The system of annual indents was also objected to. Greater promptitude in the supply of stores would enable the Government to deal more effectively with infringements of rules as to local purchase. Some additional liberty to officers in cases of urgency was, however, necessary, and a modification of the rules in this direction was suggested.

The Secretary of State in Council replied,‡ in effect, that considerable improvement had recently been made in the working of the Stores Department. Of the alterations suggested by the Government of India, some were impracticable or undesirable, others had already been introduced. With a view to preventing the multiplication of small indents, the constitution of depôts at the five great ports was suggested, and the recommendation of the Finance Committee as to the appointment of a Director of Stores in India was thought worthy of further consideration. The system of annual indents was held to be useful to maintain. The necessity of the proposed modification in rules relating to local purchase in cases of urgency was not recognised. The changes already adopted and those now suggested should, it was thought, by removing delays, prevent the necessity for recourse to local purchase. True economy demanded that purchases in India should be limited to articles which could be produced or manufactured in that country of a quality and price comparing not unfavourably with those of similar articles of European manufacture.

The result of this correspondence was to leave the rules of 1883 unchanged.

In a despatch of the same date,§ the Secretary of State in Council called attention to the large local expenditure, as shown by the 1885-86 returns, on building and engineering materials, machinery, iron, steel, tools, and plant. These were classes of stores to which the objections to local purchase applied in the highest degree, and orders should be issued with a view to limiting the practice.

In the same year (1888) the Government of India stated‖ that they had sanctioned, as a tentative measure, the local purchase of iron and steel for the Ordnance Department, and asked that the continuance of this arrangement might be approved. The Secretary of State¶ was unable to accord his sanction to this proposal.

The Government of India then repeated their request** for a relaxation of the rule relating to local purchase

in cases of urgency. Their amendment, slightly modified, was approved by the Secretary of State.

The rule as it originally stood was—*

> "When stores indented for from England have not arrived, and when inconvenience to the public service is anticipated from delay in the supply."

As amended it read—

> "When stores indented for from England have not arrived, or when a sudden emergency has arisen, and, in either case, only if serious inconvenience to the public service would be caused by waiting for the stores from England."

Such purchases were, however, to be strictly limited to articles actually procurable in India.

In 1889 the Government of India transmitted correspondence† with Messrs. Richardson and Cruddas, engineers and ironfounders at Bombay, relative to applications by that firm for permission to tender for the supply of girders and bridge work. Messrs. Richardson and Cruddas urged that the Government Resolution of 1883‡ had distinctly encouraged the purchase in India of articles of *bonâ fide* local manufacture, even although the raw material from which they were made had been originally obtained from Europe, and they maintained that girders and bridges made in India from imported bars and plates were manufactured in India in the sense of that Resolution. The Government of India were disposed to accept this view, and considered it desirable that the existing restrictions should be relaxed as regarded bridge-work, jetties, iron roofing, &c., under proper conditions as to inspection. They recommended this on the grounds that by the establishment of such local industries, which would have no great opening without a share of Government work, Government would be rendered more independent of England in meeting their wants, and would be able to pay in rupees, and that diversity of employment so important for India would be supplied. To secure these objects they thought it would be worth while even to incur some additional expense at first.

The Consulting Engineer (Sir A. Rendel) in his report§ on the question dwelt on the difficulties of inspecting the materials and finished work, means for which were admitted by the Government of India to be non-existent in India. A copy of this report was forwarded with the Secretary of State's reply,‖ in which were also pointed out the delays and difficulties which would arise from rejections, the absence of appliances for inspection, and the lack of competition for contracts. Before coming to a decision the Secretary of State asked how these difficulties were to be met.

The Government of India replied to this despatch in 1890,¶ forwarding further correspondence with Messrs. Richardson and Cruddas, and a memorial signed by that firm and 34 other firms in all parts of India representing the interests of the iron manufacture. Copies were also enclosed of representations from the Government of Bombay and the Chambers of Commerce of Madras and Karachi.

Still urging a relaxation of the rules, the Government detailed their proposals as to inspection, &c. The fear of difficulties from rejections they thought rather exaggerated, and they gave reasons why the scheme should not be allowed to drop on account of the absence of competition. A point was made of the fact that the Government, while encouraging technical education, were, by their prohibitions, restricting the employment of those educated in the institutes. A list of the articles with which the experiment might be commenced was furnished. And, finally, reference was made to the recent sale of the Government ironworks at Barakur to the Bengal Iron and Steel Company, who would naturally hope to share in Government orders.

Sir A. Rendel in his report* remarked that he was much impressed during his visit to India in 1890 with the advance made since his previous visit, 12 years before, with the manufacturing powers of the country, with its production of coal, and its capacity for still greater production. Workmanship was now to be found in India, or might easily be created, equal to most of the ordinary requirements of railways, except engines and boilers, and at much less cost than in England. Also the demand for skilled English labour was so great that it was extremely desirable to supplement it with Indian labour. The chief difficulties arose from want of competition, and the fact that India was not a metal-producing country. The rest of the report was chiefly concerned with criticisms and suggestions regarding the Government proposals as to testing and inspection. On the main questions Sir A. Rendel's view was that the proposed experiment should be tried.

The Director-General of Stores† was also of opinion that the trial should be made, and offered suggestions for comparing the local with English prices, and as to testing and inspection. The Public Works Secretary held the same view.‡

The Secretary of State in his reply expressed his plersure at receiving such evidence of the manufacturing progress of India. The remarks and suggestions of the Director-General of Stores and Consulting Engineer were forwarded for consideration. The Secretary of State would leave it to the Government of India to adopt such measures and to impose such limits as they might consider desirable for the purpose of giving a fair and thorough trial to the experiment of obtaining in India supplies of materials, tools, and plant made of iron and steel and manufactured locally.§ Care must be taken to guard against any supposition that these measures were adopted in any other interests than those of economy, and against any claim for the protection of local industry, or for compensation in the event of its being found necessary to discontinue the practice of inviting tenders in India.

The Government of India forwarded a copy of their Resolution‖ giving effect to the orders of the Secretary of State (No. 2650 of 25th June 1891). The restrictions imposed on the purchase of locally made iron and steel work were in substance,—

(1.) Articles not to be imported into India in a finished or partly finished state.
(2.) Price not to exceed that paid by the India Office.
(3.) Quality not to be inferior to English supplies.

The Resolution also contained a list of the articles with which the experiment might be commenced.

The Secretary of State approved these orders.¶

The subsequent correspondence has merely related to details in the annual returns.

The rules of the Resolution of 10th January 1883 (*see* page 2) are, it will be seen, still in force. The only change has been in the interpretation of that Resolution. Whereas prior to 1891 articles into the composition of which iron and steel largely enter were held to be specially excluded from those which might be obtained locally, such articles locally manufactured may now be obtained from Indian manufacturers or merchants under certain limitations.

APPENDIX No. 37.

Statement handed in by Sir Henry Waterfield, with reference to Q. 11,907.

FINANCIAL RESULTS of the TRANSACTIONS connected with DEBT in England since 1878-79.

A comparison of the charge for Interest on Debt in 1878-79 and 1895-96, including that now charged in the Railway Revenue Account, gives the following result:—

	1878-79.	1895-96.
	£	£
Interest on Debt	2,593,112	2,622,695
Railway Revenue Account:— State Railways: Interest on Debt	—	980,020
Ditto Interest chargeable against companies on advances.	—	218,884
	2,593,112	3,821,599

showing an increase of 1,228,487*l*. It must not, however, be supposed that this is the true result of the various changes which have been made in regard to the Debt during those 17 years, since the liability which has in many cases been extinguished was formerly included in the Railway Revenue Account under other heads than that of Interest on Debt. The following is a calculation of the annual charge on the whole debt (whether incurred for the purchase of railways or otherwise) which existed on the 31st March 1879, with that on the debt in existence on the 31st March 1896, after deducting the liabilities cancelled by the creation of stock since 1879. No account is taken in this calculation of the temporary loans from the Bank of England, receipts from the temporary investment of the Cash Balance, and other minor matters.

	31st March 1879.		31st March 1896.	
	Debt.	Annual Charge.	Debt.	Annual Charge.
	£	£	£	£
East India Bonds at 4 per cent.	5,486,700	219,868	—	—
India Debentures at 4 per cent.	7,596,500	303,860	—	—
India Debentures at 3½ per cent.	—	—	5,000,000	162,500
India 5 per cent. Stock	17,200,000	860,000	—	—
„ 4 „ „	28,715,000	1,148,600	—	—
„ 3½ „ „	—	—	63,798,467	2,232,946
„ 3 „ „	—	—	42,151,079	1,264,532
India Bills	—	—	2,000,000	24,594
	59,008,200	2,532,328	112,949,546	3,684,572

Deduct.—Interest on securities cancelled by creation of stock since 1879:—

	£	£
Indian Transfer Loan		44,674
Railway Annuities:		
East Indian		328,462
Eastern Bengal		22,311
Scinde, Punjab, and Delhi		200,468
Railway Debenture Stock:		
East Indian 4½ per cent.		2,896
Eastern Bengal 4 per cent.		2,506
Railway Debentures:		
East Indian 4½ and 4 per cent.		120,500
Eastern Bengal 4 per cent.		24,494
Oude and Rohilkund Guaranteed Railway:		
Stock 5 per cent.		200,000
Debentures 4 and 3½ per cent.		177,760
Madras Irrigation and Canal Company:		
Stock 5 per cent.		49,983
South Indian Guaranteed Railway:		
Stock 5 and 4½ per cent	160,070	
Less 3 per cent. on 1,000,000*l*., the capital of the New Company	30,000	130,070
Debentures 3½ per cent.		26,470
		1,330,594
		2,353,978
Deduct also the interest on India 3 per cent. stock created and issued under 51 Vict. chap. 5 for advances to Railway Companies, as the money must otherwise have been raised by the Companies under the guarantee of the Secretary of State		225,125
Net annual charge		£2,128,853
Reduction of annual charge since 1879		£403,475

The result may be thus summed up concisely:—

Reduction of interest by cancelling various securities since 1878-79	1,330,594
Guaranteed interest has been avoided by the issue of India 3 per cent. stock (for advances to Railway Companies) the interest on which is	225,125
	1,555,719
Addition to interest owing to issue of debt since 1878-79	1,152,244
Net reduction of annual charge	£403,475

It may be taken that 6,000,000*l.* was added to the Debt in consequence of the Public Works Loan having on two occasions been raised in this country. It must, however, be remembered, that an increase of the debt to approximately the same amount, has been avoided by the application of the sums of 1,001,393*l.* remitted in 1882–83 by the Commission for the Reduction of Debt, and 5,000,000*l.* paid by the Treasury to the Secretary of State in Council, between 1879–80 and 1885–86, on account of the Afghan War.

The increase of the debt during the period has been 53,941,346*l.*, of which 41,169,718*l.* has been applied in the following manner, since the 31st March 1879, in discharge of then existing or contingent liabilities:—

	£
Railway Annuities:	
East Indian	6,874,448
Eastern Bengal	505,257
Scinde, Punjab, and Delhi	4,606,401
Railway Debenture Stocks:	
East Indian	77,644
Eastern Bengal	65,466
Oude and Rohilkund Guaranteed Railway Company: Debt created for purchase of the undertaking, and for discharge of debentures	10,333,191
South Indian Guaranteed Railway Company: Debt created for purchase of the undertaking, and for discharge of Debentures	3,996,222
Debt issued under 51 Vict. chap. 5, for advances to Railway Companies	7,504,170
Railway Debentures:	
East Indian	2,950,000
Eastern Bengal	612,350
Indian Transfer Loan	1,128,784
Madras Irrigation and Canal Company: purchase of	1,419,785
Discharge of temporary loan from the Bank of England outstanding on 31st March 1879	1,000,000
Debt created under the Maharajah Duleep Singh's Estate Act, 1882	96,000
	£41,169,718

The remaining amount of 12,771,628*l.* is thus accounted for:—

	£	£	£
Net discount, or difference between par value of stock, as shown in debt return, and money received			1,918,068
Improvement of cash balance			2,275,327
Excess of net disbursements in England over supplies from India		22,197,190	
Less—			
Portion of loans raised for public works	6,000,000		
Debt issued for advances to Railway Companies	7,504,170		
		13,504,170	
			8,693,020
Amount by which stock cancelled by Commission for reduction of debt fell short of 1,000,000*l.*			6,416
			12,892,831
Deduct:			
Stock purchased by discount sinking fund		95,650	
Addition to debt not bearing interest		25,553	
			121,203
			£12,771,628

Of the total increase of 53,941,346*l.*, debt to the amount of 13,626,615*l.** will be gradually cancelled by the sinking funds. And, owing to the improvement in the credit of the Secretary of State in Council, and the expiration of the periods for which the India 5 and 4 per cent. stocks were guaranteed against redemption, the burden of the charge for interest, &c. has been reduced by 403,475*l.*

	£
* To be cancelled by Railway Sinking Funds	12,129,215
" " Discount Sinking Fund	1,497,400
	£13,626,615

C. R. KIERNANDER,
Accountant-General, Kashmir State.

NOTE.—(*i.*) The figures of expenditure for the first three years, 1889–92 inclusive, are not trustworthy. The figures given are those found in the State accounts; but, as there was no regular Audit and Account Department in the State in these years, their accuracy is open to question.

(*ii.*) The figures given comprise the whole of the expenditure in Gilgit, but obviously it is not all connected with the re-establishment of the Gilgit Agency. The Darbar incurred expenditure on the administration of Gilgit under the heads Land Revenue, Political, Miscellaneous, Military and Public Works, before the Agency was established, and, though no doubt expenditure recently has been very largely increased, a certain proportion of the expenditure shown would have been incurred in any case, even if the Agency had not been re-established.

(*iii.*) The increase under Land Revenue is mainly owing to the introduction of settlement operations and the entertainment, under the British Agent's orders, of a special corps of Sappers and miners, known as the cultivation corps, and costing Rx. 2,000 a year for improving the irrigation channels of the country.

(*iv.*) The coolie corps, established on the recommendation of the British Agent, for the purpose of relieving the pressure of forced labour, is responsible for the bulk of the expenditure under Miscellaneous. The estimated cost of this corps in the current year is over Rx. 4,300.

(*v.*) The heavy expenditure on Public Works, during recent years, has been owing to the construction and maintenance of the Srinagar-Gilgit Road, on which, up to the beginning of the current year, the State has spent Rx. 157,169. It is hoped that in future years the maintenance of this road will not cost more than Rx. 5,000 per annum.
The future expenditure under this head will, therefore, probably be—

	Rx.
Gilgit Road	5,000
Ordinary Public Works	6,000
	11,000

H. S. BARNES.

APPENDIX No. 39.

Paper handed in by Sir Henry Waterfield, K.C.S.I., C.B., with reference to Question 12,109.

STATEMENT showing the POSITION of INDIAN FINANCE from 1884–85 to the present time, if the FAMINE INSURANCE GRANTS (other than Payments for Relief) be considered as SURPLUS REVENUE applied to the REDUCTION of DEBT.

APPENDIX No. 40.

Paper put in by Sir Henry Waterfield with reference to Question 12,162.

RATES OF EXCHANGE FROM 1837–38.

The Official Rate is the rate fixed annually in communication with the Treasury for the adjustment of transactions between the British and Indian Exchequers.

The Budget Rate is the rate assumed in the Indian Budget for each year.

The Rate Realized is the average rate actually obtained for Bills and Transfers on India sold in London.

APPENDIX No. 42.

Papers handed in by Sir Henry Waterfield, with reference to Q. 12,196.

TERMS FOR CONSTRUCTION OF RAILWAYS IN INDIA BY COMPANIES.

Attached are copies of Resolutions by the Government of India, dated respectively the 15th September 1893, the 29th March 1895, and the 17th April 1896, formulating the terms on which offers may be made for the construction of branch railways and extensions by private agency.

Since 1893, three companies have been formed in this country to construct railways on the general lines of these resolutions, viz.: the Southern Punjab, the South Behar, and the Ahmedabad-Prantej, while a fourth, the Tapti Valley, is on the point of formation. The actual terms settled in the case of each of the three lines mentioned as having been already undertaken, will be found in the appended abstract of the contracts with the companies. All these lines are still under construction, so that no financial results can be given.

The Southern Punjab Railway is a chord of the North-Western Railway system, shortening the distance between Delhi and Karachi. Its length is 400 miles, and it is estimated that it will cost Rs. 213,97,670 (excluding rolling stock). The South Behar Railway forms a chord to a portion of the East Indian Railway, connecting Gya with Luckieserai. Its length is 83 miles, and its estimated cost is Rs. 109,63,690 (excluding rolling stock). The Ahmedabad-Prantej Railway is a branch of the Bombay, Baroda, and Central India Railway, 47½ miles long. Its cost is estimated at Rs. 18,38,993 (excluding rolling stock).

Inquiry is being made of the Government of India as to any applications for concessions made, and any companies formed in India under the terms offered in the Resolutions.

C. S. COLVIN,
P. W. Secretary.

Railway Construction.

Simla, 15th September 1893.

TERMS on which the GOVERNMENT OF INDIA are prepared to consider offers for the CONSTRUCTION, by the AGENCY of PRIVATE COMPANIES, of BRANCH LINES or EXTENSIONS of existing RAILWAYS, to be worked, when constructed, by the MAIN LINE ADMINISTRATIONS.

Read—

Government of India Circular Resolution No. 1366 R. C., dated 30th December 1887.

Observations.—His Excellency the Governor-General in Council has had under consideration the question of the extension of railways in India, and has determined to provide additional encouragement for the investment of private capital in the construction of branch lines and extensions of existing railways. It has been resolved accordingly to revise the concessions previously offered to persons willing to embark upon such undertakings, and to publish for general information the terms and conditions on which projects will be entertained.

2. The concessions offered are—

(1) the free use of land;

(2) the provision of rolling stock and the maintenance and working of the new lines at favourable rates by the main line administrations;

(3) the free use of surveys, &c., made at State expense;

(4) the carriage of stores and materials over State lines at favourable rates;

(5) the grant of a limited rebate from the main line earnings towards ensuring the proprietors of the new lines a dividend of 4 per cent. per annum on the approved capital expenditure.

3. In addition to the above, if it can be legally arranged, authority will be given to charge to the capital account of the branch railway during construction and until the close of the half-year next following the half-year in which the branch railway may be fully opened for traffic, such sum as, together with any net receipts from working, will suffice to pay interest at the rate of 4 per cent. per annum on the paid-up capital. The payment of interest out of capital as a part of the constitution of a company cannot, however, at present be recognized except under parliamentary sanction. The question of applying to Parliament for power to enable the Secretary of State for India in Council to recognize such payments in respect to Indian undertakings is under consideration.

4. It is not the intention of the Government of India to grant in every case the *maximum* concessions mentioned in this Resolution. Each project presented will be separately examined, and will be treated on its merits. No concession will be given for any project unless it is shown to possess reasonable prospects of financial success. His Excellency the Governor General in Council deems it essential to insist in all cases in view of the extent to which the new lines will be subsidised at the cost of State revenues, and in order to secure a proper return for that expenditure, that the new lines shall be worked as if they were part and parcel of the main line undertakings, and in a manner that will give the public the benefit of cheap transport

over them, and at the same time attract new traffic to the main lines. For that purpose ultimate control over the rates and fares charged for the carriage over the new lines of passengers and goods will be retained in the hands of the Government.

5. The Government of India are prepared to undertake the construction by its Department of Public Works of branch lines or extensions of existing railways on behalf of persons who may have provided the necessary capital.

6. Applications for concessions to construct branch lines or extensions under the terms of this Resolution should be submitted, in the form prescribed by Memorandum A., hereto attached, to the address of the Secretary to Government of India, Public Works Department.

Resolution.—Proposals for the construction of branch lines or extensions of existing railways made by persons who satisfy the Government that they are in a position to command substantial financial support will be considered on the under-mentioned terms and conditions, viz.:—

(1.) The proposed railway (herein-after called the "branch railway") must be built in accordance with the fixed and moving dimensions for the time being prescribed by the Governor-General in Council, and on plans and estimates that have been approved by that authority.

(2.) The extent and details of the concessions to be granted in each case will be settled by agreement.

Lines to be connected with State Railways.

The following terms will apply to projects for the construction of branch railways to be connected with State railways:—

(3.) Access will be given, on application and free of charge, to all information, plans, or estimates in the possession of Government that relate to railways whose construction the Government is prepared to entrust to companies; but no responsibility will be accepted by Government for the accuracy of any information, plan, or estimate thus made available.

(4.) The use of such land as is necessary, in the opinion of the Government of India, for the construction of the branch railway, and for the stations, station yards, offices, warehouses, houses for employés, conveniences, and works necessary or proper for the purposes of the railway, as well as for quarrying, ballast, brickfields, and kindred purposes, will be provided by Government free of charge.

(5.) The branch railway will be maintained and worked by the main line administration during the full currency of the contract to be entered into for the purpose at a fixed ratio of expenses to earnings in each half-year. The ratio will, when the branch railway is of the same gauge as that of the working railway, usually be that obtaining on the whole system, including the branch railway, and will not ordinarily exceed 50 per cent. of the gross earnings of the branch from all sources, and will be inclusive of charges for the use of the main line rolling-stock. Charges for Home Board direction of the branch railway will be excluded from the arrangement, and will have to be defrayed out of the share of the earnings pertaining to the branch railway.

(6.) Railway materials for the branch railway will be carried over State lines at the special rates prescribed for such materials belonging to State railways.

(7.) A return will be made to the branch line by the main line of such a sum from the traffic interchanged with it as shall out of the gross earnings of the main line, together with the branch company's share of branch earnings, be sufficient to give the branch company a dividend of 4 per cent. per annum on the actual expenditure charged in the capital account of the branch railway company as entered in the Company's books in India; provided always, that the return so made to the branch company shall in no case exceed 10 per cent. of the gross earnings of the main line from traffic interchanged between the main and branch lines. This rebate will be granted from the first earning of revenue by the branch line, such payment being calculated at the close of the "calendar" year, payments on account, however, subject to adjustment, being permissible at the close of the first half of each year.

(8.) Funds for the execution of new works—properly chargeable to capital—found necessary after the branch railway has been opened to traffic shall be provided by the branch railway company. Such works and their cost must be agreed upon between the branch railway company and the main line administration before they are put in hand. In the event of any difference of opinion arising between the branch line and the main line administration as to the necessity for and the cost of any new work, the matter will be referred to the Director General of Railways as arbitrator, and his decision shall be final.

(9.) Rates and fares upon the branch railway shall be within the limits of the schedule of maximum and minimum rates that may be from time to time authorised by Government for the main line, and shall be controlled by the main line administration. Ordinarily the rates and fares charged on the branch railway shall be not more than the highest nor less than the lowest mileage rates charged for the time being for similar traffic on the main line. Deviations outside of these mileage rate limits will not be permissible except with the special sanction of Government in each case.

(10.) Government will have the right, on giving 12 months notice, to purchase the branch railway either—

(i) at the expiration of 21 years from the date of opening to traffic of the branch railway, and thereafter at successive intervals of 10 years, at 25 years' purchase, based on the average net earnings of the branch for the five years immediately preceding the purchase, provided that the price shall not in any case exceed the total capital expenditure by more than 20 per cent., and shall not be less than the capital expenditure; or

(ii) at the expiration of 50 years from the date of opening to traffic of the branch railway on payment of the actual capital expenditure.

(11.) Electric telegraphs and telegraphic appliances will be supplied and maintained by the Government of India: the charges for rent, maintenance, and inspection of telegraphic works and appliances will be included in the working expenses. Free passes shall be granted over the branch railway for persons employed by the Government of India on the construction, maintenance, working, and inspection of the telegraphs.

(12.) The rates and arrangements in force on State railways in the matter of services rendered to the Postal Department, to the Military, Police, and other Departments of the State, and to high Government officials shall be applicable to the branch railway.

(13.) The general character of the supervision and control that will be exercised by the Government of India over the branch railway, apart from the provisions of the Railway Acts and the preceding provisions of this Resolution, is indicated in the following paragraphs:

(i) The route of the line and the situation of the stations, and other similar details, will be determined by the Government of India.

The line, while under construction, shall be inspected when and so often as an inspecting officer appointed for that purpose by the Government of India shall consider desirable with a view to ensure the construction of the line up to the standard agreed on.

(ii) The branch railway company, if required, shall keep capital accounts and statistics in forms approved by the Secretary of State, and shall render, free of cost, all accounts and statistics required by Government. The accounts and books will be subject to audit on behalf of Government.

(iii.) No capital expenditure by the branch railway company will be allowed as between the Secretary of State and the company unless the prior sanction of the Secretary of State has been obtained.

(iv.) The company shall have no power to increase its share or stock capital without the sanction of the Secretary of State, or to borrow money except within a fixed limit and on specified conditions.

Lines to be connected with Railways belonging to, or worked by, Guaranteed or Assisted Companies.

As regards branch railways connecting with railways belonging or leased to Guaranteed or Assisted Companies:

(14.) Land necessary, in the opinion of the Government of India, for the purposes of the railway will be provided by Government free of charge as indicated in para. (4) above.

(15.) The term under which the branch railway will be maintained and worked by the main line administration will be subject in each case to agreement between the main line and branch line companies and to the approval of Government. The Government will endeavour to obtain for the branch railway company terms approximating to those that would be granted under the terms of this Resolution if the branch railway were connected with a State railway.

(16.) Other relevant concessions and stipulations contemplated by this Resolution in the case of branch railways connecting with State railways will be applied.

Alternative Terms and Surveys.

2. The Government of India will be prepared to consider proposals for working branch lines on terms other than the above which may be put forward by promoters.

3. If, after consideration of the question on its merits, it be decided that the gauge of any branch line shall be different from that of the main line, the question of the ratio of expenses to earnings at which the branch shall be worked will be subject to arrangement in each case, but in such cases the branch line must be fully supplied with necessary rolling-stock and workshops by the branch railway company.

4. When application is made for permission to construct a branch line which the Government is inclined to entrust to a company on a route which has not been surveyed, the survey will, if so desired, be carried out by the Public Works Department of the Government of India on the applicants undertaking to pay the cost of such survey and depositing the estimated amount thereof on the understanding that, if permission is eventually given for the construction of the line, the actual cost of the survey may be included in the capital cost of the undertaking.

Applications for permission to carry out surveys for the construction of branch lines should be submitted to the address of the Secretary to Government of India, Public Works Department, in the form prescribed by Memorandum B. hereto attached.

ORDER.—Ordered, that this Resolution be communicated to Local Governments and Administrations and to the officers marginally noted* for information, and to the Department of Finance and Commerce.

Also that it be published in the "Gazette of India" for general information.

F. L. O'CALLAGHAN,
Secretary to the
Government of India.

Documents accompanying.

Memorandum for the guidance of persons or syndicates desirous of submitting proposals for the construction of railways in India, with appendices, referred to in paragraph 6.

---

* The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Residents at Hyderabad and in Mysore.

The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, Central Division, and Assam.

Enclosure No. 1 (with Annexures) to Government of India Resolution No. 924 R.C. of 1893.

Memorandum A.

For the guidance of Persons or Syndicates desirous of submitting Proposals for the construction of Railways in India.

1. All applications for leave to construct a railway in any part of British India are to be addressed to the Secretary to the Government of India, Public Works Department.

2. All such applications shall be printed, and shall be drawn up, as far as may be, in Form A. attached hereto, and shall specify—

(*a*) the company, person, or syndicate by whom the application is preferred; the proposed amount of capital, the number of shares, and the amount of each share;

(*b*) all the termini, together with the names of all the principal towns from, through, into, or near which the railway is intended to be constructed, as well as the names of each civil division and district to be traversed by the proposed alignment;

(*c*) the length, so far as known, of the proposed railway;

(*d*) the gauge, the weight of rails, &c.;

(*e*) the motive power to be employed;

(*f*) the maximum tolls, rates, and fares proposed to be charged on the projected railway;

(*g*) the proposals for working the railway when constructed; and if any agreement is under contemplation, or has been provisionally arranged with any existing Railway Administration under which the proposed line, when constructed, is to be leased out for working by such Railway Administration, the exact nature and terms of such agreement;

(*h*) Any further information that may be required to enable Government to thoroughly understand the scope of the proposals.

3. Every such application shall be accompanied by a map to a scale of one mile to one inch, with the line of the proposed railway delineated thereon, so as to show its general course and direction, and also by an estimate, as correct as may be, of the works proposed to be authorised.

4. When the applicants draw up their own detailed plans and estimates, these documents are invariably to be prepared in strict accordance with the rules for the preparation of railway projects issued under the authority of the Government of India, of which copies may be obtained on payment from the Superintendent of Government Printing, Calcutta.

5. List of all routes in British India along which new lines of railway have at any time been proposed, and which have for railway purposes been either reconnoitred or surveyed, may be had on application to the Superintendent of Government Printing, Calcutta, on payment of a fee of Rs. 5.

6. Upon written application to the Director-General of Railways, permission will also be accorded to inspect at all reasonable hours the detailed plans, sections, and estimates at the disposal of Government in regard to any particular route already surveyed, provided that they relate to railways the construction of which the Government is prepared to entrust to companies; and copies of such plans, sections, and estimates will be furnished on payment of the cost of copying.

7. But in regard to all such information, statistics, plans, sections, or estimates which may be furnished, it is to be recognised that the information thus offered to any person interested in the matter is simply the best information of the kind at the disposal of Government, and that Government cannot accept any responsibility whatever in regard to the accuracy of any of the documents.

FORM A.

To accompany all applications for leave to construct railways to any part of British India.

	Nature of Particulars to be specified.	Particulars.
1	The name of the Company, person, or persons by whom the application is preferred; the proposed amount of capital, the number of shares, and the amount of each share.	
2	The termini, together with the names of all the principal towns from, in, through, or into, or near which the railway is intended to be constructed.	*Reference to an Appendix* (vide *Sub-Appendix A.*) *may be here given if necessary.*
3	The length, as far as known, of the proposed railway.	
4	The gauge proposed and weight of rails, &c.	
5	The motive power to be employed.	
6	The maximum tolls, rates, and fares intended to be charged on the proposed railway.	*Reference to an Appendix* (vide *Sub-Appendix B.*) *may be here given if necessary.*
7	Details of any agreement which may have been provisionally arranged, or which it is desired to enter into, under which the proposed line, when constructed, is to be leased out for working to any existing Railway Administration.	*Reference to an Appendix* (vide *Sub-Appendix C.*) *may be here given if necessary.*
8	Any further information that may be required to enable the Government of India to thoroughly understand the scope of the proposals.	

SUB-APPENDIX A.

Enclosure No. 2 to Government of India Resolution No. 924 R.C. of 1893.

Memorandum B.

For the guidance of Persons or Syndicates desirous of obtaining Authority to carry out Surveys for Lines of Railways in India.

1. All applications for leave to survey proposed railway routes in any part of British India are to be addressed to the Secretary to the Government of India, Public Works Department.

2. All such applications shall specify—

(*a*) the company, person, or syndicate by whom the application is preferred;

(*b*) all the termini, together with the names of all the principal towns from, through, into, or near which the survey is intended to be carried, as well as the names of each civil division and district to be traversed by the proposed alignment;

(*c*) the length, so far as known, of the proposed railway;

(*d*) the gauge and the motive power to be employed;

(*e*) the intentions of the applicants as to the working of the railway when constructed. If it is intended that the working shall be leased to any existing railway administration, the nature of the contemplated agreement shall be specified.

3. Every such application shall be accompanied by a map to a scale of one mile to one inch, with the line of the proposed survey delineated thereon, so as to show its general course and direction.

4. If the detailed plans and estimates are submitted to Government, these documents are invariably to be prepared in strict accordance with the rules for the preparation of railway projects issued under the authority of the Government of India, of which copies may be obtained on payment from the Superintendent of Government Printing, Calcutta.

5. List of all routes in British India along which new lines of railway have at any time been proposed, and which have for railway purposes been either reconnoitred or surveyed, may be had on application to the Superintendent of Government Printing, Calcutta, on payment of a fee of Rs. 5.

6. Upon written application to the Director General of Railways, permission will also be accorded to inspect at all reasonable hours the detailed plans, sections, and estimates at the disposal of Government in regard to any particular route already surveyed, provided that they relate to railways the construction of which the Government is prepared to entrust to companies; and copies of such plans, sections, and estimates will be furnished on payment of the cost of copying.

7. But in regard to all such information, statistics, plans, sections, or estimates which may be furnished, it is to be recognised that the information thus offered to any person interested in the matter is simply the best information of the kind at the disposal of Government, and that Government cannot accept any responsibility whatever in regard to the accuracy of any of the documents.'

No. R. C.

Government of India.

Public Works Department.

Railway Construction.

Calcutta, the 29th March 1895.

TERMS on which the GOVERNMENT OF INDIA are prepared to consider offers for the CONSTRUCTION, by the AGENCY of PRIVATE COMPANIES, of BRANCH LINES or EXTENSIONS of existing RAILWAYS, to be worked, when constructed, by the MAIN LINE ADMINISTRATIONS.

Read—

Government of India Circular Resolution No. 924 R.C., dated 15th September 1893.

Observations.—His Excellency the Governor General in Council has had under consideration the terms offered in the above Resolution. The following modifications thereof are published for the general information of persons desiring to undertake the construction of branch lines or the extension of existing railways in India.

The Indian Railway Act of 1894 and the Indian Railway Companies Act of 1895, which have been enacted since the Resolution under consideration was passed, now permit payment of interest out of capital during construction.

Resolution.—The following alterations of, and additions to, Resolution No. 924 R.C., dated 15th September 1893, are hereby made:—

1. The following clauses are added to the Resolution:—

1. (4) A. Where application is made for a concession for a project which has not been surveyed, or the construction of which has not been approved by the Government of India, the applicants will be required to deposit the cost of the surveys, estimates, and collection of statistics necessary for the proper consideration of the project as a condition preliminary to the acceptance for consideration of their proposals. In the event of the construction of the project being sanctioned, the costs incurred on this account will be admitted on capital account.

The cost will depend on the difficulty of the route, and will vary from Rs. 250 per mile in very easy country to Rs. 500 in ordinary country, not including Ghat surveys.

1. (4) B. Provision will be made for including in the approved expenditure of the branch line railway company such expenses on account of the board of direction of the Company as may be incurred with the sanction of the Secretary of State.

(*a.*) During the construction of the branch line, these expenses of direction may be charged to the capital account of the branch line company.

(*b.*) After the opening for public traffic of the branch railway, these expenses of direction will be met from the general receipts of the branch line company.

2. To clause 1 (10) of the Resolution above quoted, the following proviso is added as 1 (10) (iii.):—

Provided always that in calculating the purchase price the average net earnings of the branch shall not include, for the purposes of this clause, the payments by way of rebate under the new clause 1 (7).

3. *With respect to projects the capital of which is reckoned in rupees*, the following changes are made:—

(1) In clause 2 (5) of the Observations the rate of dividend is reduced from 4 per cent. to 3½ per cent.

(2) For clause 1 (7) of the Resolution the following clause is substituted:—

A return will be made to the branch line by the main line out of its net earnings from traffic interchanged with the branch to the extent necessary, together with the branch company's

share of branch earnings, to give the branch company a dividend of 3½ per cent. per annum on the actual expenditure charged in the capital account of the branch railway company as entered in the Company's books in India; provided always that the return so made to the branch company shall in no case exceed the net earnings of the main line from interchanged traffic, This rebate will be granted from the first earning of revenue by the branch line, such payment being calculated at the close of the "calendar" year, payments on account, however, subject to adjustment, being permissible at the close of the first half of each year.*

Note.—The net earnings of the main line from traffic interchanged with it from the branch line are assumed to bear the same proportion to the gross earnings from that traffic as the net earnings of the whole system bear to the gross earnings of the whole system.

ORDER.—Ordered that this Resolution be communicated to local governments and administrations and to officers marginally noted* for information, and to the Department of Finance and Commerce.

Also that it be published in the "Gazette of India" for general information.

W. S. S. BISSET,
Lieutenant-Colonel, R.E.
Secretary to the Government of India.

No. 514 R. C., dated Simla, the 17th April 1896.

Resolution by the Government of India,
Public Works Department.

TERMS on which the GOVERNMENE OF INDIA are prepared to consider offers for the CONSTRUCTION, by the AGENCY of PRIVATE COMPANIES of BRANCH LINES forming feeders either to STATE LINES worked by the STATE or to RAILWAYS worked by COMPANIES.

Read—

Public Works Department Resolution No. 924 R. C., dated 15th September 1893.

Also Public Works Department Resolution dated 29th March 1895.

Observations.—Many of the applications made under the above Resolutions show that the terms for the construction of branch or feeder lines of railway have not been fully understood.

The Government of India have accordingly resolved to cancel the previous Resolutions above quoted upon this subject, and to issue a fresh Resolution embodying a summary of the concessions which (the previous assent of any railway company concerned having been first obtained) they are now prepared to give for the construction of branch or feeder railways, such concessions being usually confined to lines not exceeding 100 miles in length.

2. It should be clearly understood that these concessions are not applicable to the larger or more important railways or to mountain branches, for which separate negotiations are in all cases necessary.

Resolution.—Branch lines forming feeders, whether to State lines worked by the State or to railways worked by companies, will ordinarily be made by the main line administrations, who shall have a prior right to construct them.

The Government of India will from time to time publish a list of branch lines, for the construction of which they are prepared to receive tenders.

They will consider and dispose of any application for the inclusion in the said list of any other line which can properly be described as a branch or feeder line, and which does not, except in special circumstances, exceed 100 miles in length.

2. Proposals for the construction of branch lines under this Resolution must conform to the following terms and conditions:—

(i.) Applicants must satisfy the Government that they are in a position to command substantial financial support.

(ii.) The gauge to be adopted must be approved by the Government in each case.

(iii.) The proposed railway shall be subject to the provisions of all Acts of the Legislature applicable to Indian railways.

(iv.) The proposed railway shall be built in accordance with the fixed and moving dimensions for the time being prescribed by the Governor-General in Council, and on plans and estimates that have been approved by that authority. The route of the line, the situation of stations, and other similar details, shall be subject to approval by the Government.

(v.) The line, while under construction, shall be inspected when and so often as an inspecting officer appointed for that purpose by the Government may consider desirable with a view to ensure the construction of the line up to the standard agreed upon.

(vi.) Inasmuch as these railways are chiefly required for the development of country hitherto deficient in means of communication, and the anticipated profits may not therefore at once be fully realised, the Government of India are prepared to give financial assistance as set forth below. Proposals for financial concessions may be made in one or other of the following alternative forms:—

(*a*)* It may be stipulated that, after the opening of the railway for traffic, the Government shall guarantee, out of the revenues of India, a fixed yearly minimum dividend in rupees on the actual expenditure charged in the capital account of the branch railway company as entered in rupees in the company's books in India, with such share of the surplus net profits as may be agreed upon. The minimum dividend to be guaranteed in each particular case will depend upon consideration of the circumstances, but for the present no offer will be entertained that requires a guarantee exceeding 3 per cent.; or

(*b*)† It may be provided that a payment be made to the branch company by the main line to the extent necessary, together with the branch company's share of branch earnings [*see* Section (5) of paragraph 3] to give the branch company a dividend of 3½ per cent. per annum on the actual expenditure charged in the capital account of the branch railway company as entered in rupees in the company's books in India; provided always that the payment so made to the branch company shall in no case exceed the net earnings of the main line from traffic interchanged with the branch. This rebate will be granted from the first earnings of revenue by the branch, such payment being calculated at the close of the year, payments on account, however, subject to adjustment, being permissible at the close of the first half of each year. The net earnings of the main line from traffic interchanged with the branch are assumed to bear the same proportion to the gross earnings of the main line from such traffic as the net earnings of the whole system, including the branch, bear to the gross earnings thereof. If the net earnings of the branch line equal or exceed 3½ per cent. on the actual expenditure as above, the whole of such earnings will go to the branch company.

---

* The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Residents at Hyderabad and in Mysore.
The Agents to the Governor General in Central India, Rajputana, and Baluchistan,
The Accountant General, Public Works Department.
The Director General of Railways.
The Consulting Engineer to the Government of India for Railways, Calcutta, Lucknow, Central Division, and Assam.

* Under (*a*) the Company will receive an absolute guarantee of interest at a rate not exceeding 3 per cent., and a higher return if the net earnings of the branch are sufficient to pay more than the guaranteed dividend.

† Under (*b*) the Company will receive a dividend of 3½ per cent. provided that the amount of the net earnings from local and interchanged traffic be sufficient, and a higher return if the net earnings of the branch from its own traffic be sufficient to pay a higher dividend.

In either of the above cases (*a*) or (*b*), if the capital is raised in sterling, the capital to be entered in rupees in the company's books in India shall be the actual amount realised in rupees from time to time by the several remittances of funds to provide for expenditure in India, together with the sterling outlay from time to time in England converted into rupees at the average rate of exchange obtained by the Secretary of State for his remittances during the half year preceding that in which the outlay shall have been incurred, and the capital expenditure in rupees on which the interest is from time to time to be calculated for the purposes of the guarantee or rebate, as the case may be, shall be the total outlay whether in India or England up to any such time as thereto charged.

(vii.) The general character of the supervision and control that will be exercised by the Government over the branch railway, apart from the provisions of the Railway Acts and the preceding provisions of this Resolution, shall be as follows:

(*a*) No capital expenditure by the branch railway company will be allowed as between the Secretary of State and the company unless the prior sanction of the Secretary of State shall have been obtained. The company shall have no power to increase its share or stock capital without the sanction of the Secretary of State, or to borrow money except within a fixed limit and on specified conditions.

(*b*) The branch railway company, if required, shall keep capital accounts and statistics in forms approved by the Secretary of State; and shall render, free of cost, all accounts and statistics required by the Government. The accounts and books will be subject to audit on behalf of Government.

(viii.) Funds for the execution of new works, properly chargeable to capital, found necessary after the branch railway has been opened to public traffic shall be provided by the branch railway company. Such works and their cost shall be agreed upon between the branch railway company and the main line administration before they are put in hand. In the event of any difference of opinion arising between the branch railway company and the main line administration as to the necessity for and the cost of any new work, the matter shall be referred to the Director General of Railways as arbitrator, and his decision shall be final.

(ix.) The rates and arrangements in force on State railways in the matter of services rendered to all Departments of the State shall apply.

3. The following are the principal additional concessions admissible for the branch or feeder railways for the construction of which tenders may be invited:

(1.) The Secretary of State for India in Council, or the Government of India respectively, will permit the charge of interest, at a rate to be agreed upon in each case, during construction to the capital account of the railway under the terms of the Indian Railways Act of 1894 (57 and 58 Vict. Chapter 12), or the Indian Railway Companies Act X. of 1895.

(2.) The land required for the construction of the branch railway will be provided free of cost. Such grant shall not include land required for quarrying, ballast, brickfields, and kindred purposes.

(3.) Electric telegraphs and telegraphic appliances will be supplied and maintained by the Government of India at the usual charges for such works.

(4.) The results of existing surveys will be made available free of charge. When desired, fresh surveys will be made by the Public Works Department of the Government of India of any branch railway on the applicants depositing the estimated cost thereof in a Government Treasury, on the understanding that no preferential claim to a concession is thereby established. If permission be eventually given for the construction of the line, the actual cost of all such surveys, as well as of those made at the cost of Government, may be included in the capital cost of the railway. No responsibility will be accepted by Government for the accuracy of any survey, plan, estimate, or other information supplied.

(5.) The branch railway may be constructed by the main line administration, and will be maintained and worked by that administration during the full currency of the contract to be entered into for the purpose, at a fixed ratio of expenses to earnings in each half-year. The ratio will, when the branch railway is of the same gauge as that of the working railway, usually be that obtaining on the whole system as from time to time existing including the branch railway, but will not exceed 50 per cent. of the gross earnings of the branch from all sources, and will be inclusive of charges for the use of the main line rolling-stock.

(6.) Such expenses on account of the board of direction of the branch line railway company as may be incurred with the sanction of the Secretary of State may be charged—

(*a.*) during construction to the capital account of the branch line company;

(*b.*) after opening, and until the minimum dividend under paragraph 2 (vi.) (*a*) or (*b*) is received by the branch line company, as part of the working expenses to be met out of the stipulated percentage of the earnings of the branch taken by the working railway;

(*c*) and thereafter out of the general receipts of the branch line company.

(7.) Railway materials for the branch railway will be carried over State lines at the special rates prescribed for such materials belonging to State railways.

4. The Government of India reserve the right to purchase all such branch railways at the expiry of 21 years, or at subsequent intervals of 10 years, on 12 months' notice the purchase price being 25 times the yearly average net earnings, not including rebate payments, of the three years preceding the purchase, with a maximum price of 120 and a minimum of 100 per cent. of cost price on a rupee basis.

5. The Government also reserve—

(i.) the right to fix and vary from time to time the classification of goods, and maximum and minimum rates for each class of goods, as well as of passengers; and

(ii.) a general control in respect to the number and timing of trains.

6. Applications for concessions to construct branch railways under the terms of this Resolution should be submitted, in the form prescribed by Memorandum A., hereto attached, to the address of the Secretary to the Government of India, Public Works Department.

7. Applications for fresh surveys to be carried out on the terms detailed in condition 3 (4) above should be submitted, in the manner prescribed by Memorandum B., hereto attached, to the address of the Secretary to the Government of India, Public Works Department.

ORDER.—Ordered that this Resolution be forwarded for information to the Local Governments and Administrations and to the officers marginally noted.*

Also that it be published for general information in the "Gazette of India."

Enclosure No. 1 (with Form A. and Appendices A., B., and C.) to Government of India Resolution, No. 514 R.C., of 1896.

Memorandum A.

For the guidance of Persons or Syndicates desirous of submitting proposals for the Construction of Branch Railways in India forming feeders either to State Lines, worked by the State, or to Railways worked by Companies.

1. All applications for leave to construct a branch or feeder railway in any part of British India are to be addressed to the Secretary to the Government of India, Public Works Department.

2. All such applications shall be printed, and shall be drawn up, as far as may be, in Form A., attached hereto, and shall specify—

(*a*) the company, person, or syndicate by whom the application is preferred, the proposed amount of capital, the number of shares, and the amount of each share;

(*b*) all the termini, together with the names of all the principal towns from, through, into, or near which the railway is intended to be constructed, as well as the names of each civil division and district to be traversed by the proposed alignment;

(*c*) the length, so far as known, of the proposed railway;

(*d*) the gauge, the weight of rails, &c.;

(*e*) the motive power to be employed;

(*f*) the maximum tolls, rates, and fares proposed to be charged on the projected railway;

(*g*) the proposals for working the railway when constructed, and if any agreement is under contemplation, or has been provisionally arranged with any existing railway administration under which the proposed line, when constructed, is to be leased out for working by such railway administration, the exact nature and terms of such agreement;

(*h*) any further information that may be required to enable Government to thoroughly understand the scope of the proposals.

3. Every such application shall be accompanied by a map to a scale of one mile to one inch, with the line of the proposed railway delineated thereon, so as to show its general course and direction, and also by an estimate, as correct as may be, of the works proposed to be authorised.

4. When the applicants draw up their own detailed plans and estimates, these documents are invariably to be prepared in strict accordance with the rules for the preparation of railway projects issued under the authority of the Government of India, of which copies may be obtained on payment from the Superintendent of Government Printing, Calcutta.

5. Lists will be published from time to time of the branch railways forming feeders, whether to State lines worked by the State or to railways worked by companies, for the construction of which the Government of India are prepared to receive tenders. Copies of such lists can be obtained on application addressed to the Secretary to the Government of India, Public Works Department.

6. Upon written application to the Director General of railways, permission will also be accorded to inspect, at all reasonable hours, the detailed plans, sections, and estimates at the disposal of Government in regard to any particular route already surveyed, provided that they relate to branch railways the construction of which the Government is prepared to entrust to companies; and copies of such plans, sections, and estimates will be furnished on payment of the cost of copying.

7. But in regard to all such information, statistics, plans, sections, or estimates, which may be furnished, it is to be recognised that the information thus offered to any person interested in the matter is simply the best information of the kind at the disposal of Government, and that Government cannot accept any responsibilty whatever in regard to the accuracy of any of the documents.

Form A.

To accompany all applications for leave to construct a branch or feeder railway in any part of British India.

	Nature of Particulars to be specified.	Particulars.
1	The name of the Company, person, or persons by whom the application is preferred; the proposed amount of capital, the number of shares, and the amount of each share.	
2	The termini, together with the names of all the principal towns, from, in, through, or into, or near which the railway is intended to be constructed.	*Reference to an Appendix* (vide *Appendix A.*) *may be here given if necessary.*
3	The length, as far as known, of the proposed railway.	
4	The gauge proposed and weight of rails, &c.

Enclosure No. 2 to Government of India Resolution No. 514 R.C. of 1896.

Memorandum B.

For the guidance of persons or syndicates desirous of having surveys for branch or feeder lines of railway in India carried out at their expense by the Public Works Department.

1. All applications for the survey of proposed branch or feeder railway routes in any part of British India are to be addressed to the Secretary to the Government of India, Public Works Department.

2. All such applications shall specify—

(*a*) the company, person, or syndicate, by whom the application is preferred;

(*b*) all the termini, together with the names of all the principal towns from, through, into, or near which the survey is intended to be carried, as well as the names of each civil division and district to be traversed by the proposed alignment;

(*c*) the length, so far as known, of the proposed railway;

(*d*) the gauge and the motive power to be employed;

(*e*) the intentions of the applicants as to the construction and working of the railway. If it is intended that the working shall be leased to any existing railway administration, the nature of the contemplated agreement shall be specified.

3. Every such application shall be accompanied by a map to a scale of one mile to one inch, with the line of the proposed survey delineated thereon, so as to show its general course and direction.

4. If the detailed plans and estimates are submitted to Government, these documents are invariably to be prepared in strict accordance with the rules for the preparation of railway projects issued under the authority of the Government of India, of which copies may be obtained on payment from the Superintendent of Government Printing, Calcutta.

5. Upon written application to the Director General of Railways, permission will also be accorded to inspect at all reasonable hours the detailed plans, sections, and estimates at the disposal of Government in regard to any particular route already surveyed, provided that they relate to branch or feeder railways, the construction of which the Government is prepared to entrust to companies; and copies of such plans, sections, and estimates will be furnished on payment of the cost of copying.

6. But in regard to all such information, statistics, plans, sections, or estimates which may be furnished, it is to be recognised that the information thus offered to any person interested in the matter is simply the best information of the kind at the disposal of Government, and that Government cannot accept any responsibility whatever in regard to the accuracy of any of the documents.

W. S. S. BISSET, Colonel, R.E.,
Secretary to the Government of India.

ABSTRACT of CONTRACTS with the SOUTH BEHAR, SOUTHERN PUNJAB, and AHMEDABAD-PRANTEJ RAILWAY COMPANIES.

Railway Company.	Government Aid.		Distribution of Profits.	Obligations of Company in respect of			Determination of Contract.
	Land.	Guarantee or Subsidy.		Mails.	Troops, Officials, Stores, &c.	Fares and Rates.	Power of Government to Purchase, and to determine Contract.
SOUTH BEHAR (7 Aug. 1895.)	Free	Government undertakes to *construct* (*from* funds supplied by the Company), maintain, and work the railway, either through a working agency or by State agency. (The agency selected is the East Indian Railway Company, with which an agreement for the purpose was entered into by the Government on the 22 Aug. 1895.) For the first two years after the opening of any section the *cost* of maintenance is to be a charge against capital, and the Government is to retain only 35 per cent. of the gross earnings for providing rolling stock and working the line, the remaining 65 per cent. going to the Company. Thereafter the Government will retain 45 per cent. of the gross earnings to meet the cost of maintaining, stocking, and working the line, the Company taking the remaining 55 per cent. By agreement with the East Indian Railway Company, the Government will, in respect of each half year, allow to the South Behar Railway Company, by way of rebate on the share attributable to the East Indian Railway of the receipts from traffic interchanged between the two railways, such a sum not exceeding 30 per cent. of such share as will, together with the net earnings of the South Behar Company for the half year, make up an amount equal to interest for the half year at a rate of 4 per cent. per annum on the actual capital expenditure on the South Behar Railway. For the purpose of calculating this rebate, the capital expenditure is to be regarded as not exceeding Rs. 120 lakhs, and the amount towards making up which the rebate is to be allowed is to be limited to Rs. 2,40,000 in any half year.		—	—	The rates and fares are to be such as may from time to time be agreed upon between the Government and the working agency, subject to the conditions that they are to be within the maximum and minimum rates and fares in force on the East Indian Railway, and that the classification of goods is to be in accordance with that on the East Indian Railway.	Government may determine the contract if, before the line is open, the Company fail to supply funds or materials for the completion of the work. In the event of the contract being terminated from this cause, the Government undertakes to pay to the Company in rupees the fair value of the railway, works, and stores given up by the Company. The Government also has power to determine the contract on the 30 June 1919, or at the end of any subsequent period of 10 years from that date, by giving 12 months' notice. In case of such determination the Government will pay to the Company in England an amount equal to the total paid-up capital in sterling, so far as such capital has been expended on the undertaking with the authorisation of the Secretary of State.
SOUTHERN PUNJAB (13 Aug. 1895.)	Free	Government undertakes to maintain the line (except during the first 12 months after opening, for which period the cost of maintenance will be borne by the Company), and also to provide rolling stock and work the line. For these services the Government will retain 52 per cent. of the gross earnings. The Government will allow to the Company, in respect of each half year, by way of rebate on the net earnings of the North-Western Railway from traffic interchanged with the Southern Punjab Railway and from through traffic between stations of the N.-W. Railway sent over the Southern Punjab Railway, such a sum (not exceeding the amount of such net earnings of the N.-W. Railway) as will, together with the Company's net earnings, make up an amount equal to interest for the year at a rate of 3½ per cent. on the actual expenditure charged in the capital account.	Surplus profits in excess of 3¾ per cent. per annum on the total capital expenditure in sterling are divisible equally at the close of each year between Government and the Company.	Rates and arrangements in force on State railways to be applicable.		Rates and fares to be within the maximum and minimum rates and fares in force on the North-Western State Railway, and the same terminals as on the North-Western Railway to be allowed.	If the railway shall not be constructed in accordance with the provisions of the contract, and completed and ready and fit for opening by the 31 Dec. 1898, the Government may determine the contract and take possession of the railway, works, materials, &c., paying the Company in sterling the equivalent of the fair value of the property. The Government may also, by giving 12 months' notice, determine the contract— (i.) on the 31 December 1919 or at the end of any subsequent period of 10 years. In this case the Government undertakes to pay to the Company in sterling a sum equal to 25 times the yearly average of the Company's share of the net earnings of the railway during the last preceding five years, provided that such sum shall not exceed by more than 20 per cent. the total capital expenditure of the Company in sterling, nor be less than such capital expenditure; or (ii.) on the 31 Dec. 1948. In this case the Government undertakes to pay to the Company in sterling a sum equal to the total capital expenditure in sterling.
AHMEDABAD-PRANTEJ (13 March 1896.)	Free	Government undertakes to construct (from funds supplied by the Company), work, and maintain the line, through State or other agency, the necessary rolling stock being supplied by the working agency. (The agency selected is the B. B. and C. I. Railway Company, with which an agreement for the purpose was entered into by Government on the 4th June 1896.) The charge to the Ahmedabad-Prantej Company for the working, stocking, and maintenance of the line is to be calculated half yearly at the same percentage of gross earnings as obtains on the Rajputana-Malwa undertaking, but it is provided that the charge shall not in any year exceed 50 per cent. of the gross earnings for that year. The residue of the gross earnings, after deduction of the charge for working, &c., is payable to the A.-P. Company. By agreement with the B. B. and C. I. Railway Company, the Government will allow to the Ahmedabad-Prantej Company in respect of each calendar year, by way of rebate, such a sum, not exceeding 10 per cent. of the combined shares attributable to the B. B. and C. I. and Rajputana-Malwa Railways of the gross earnings from traffic interchanged between those railways, or either of them, and the A.-P. Railway, as will, together with the net earnings of the A.-P. Company, make up an amount equal to interest for the year at the rate of 4 per cent. per annum on the actual capital expenditure. The Government will also allow the Company the sum of Rs. 5,000 per annum towards the Company's office expenses and expenses of management.		—	—	Rates and fares are to be such as may from time to time be arranged between the Government and the working agency, but it is provided that they shall be within the maximum and minimum rates and fares for the time being in force on the R.-M. Railway. The classification of goods is to be in conformity with that in force on the R.M. Railway.	Government may determine the contract if, before the line is open for traffic, the Company fail on demand to supply the funds required for its completion. In case of such determination the Government will pay the Company in rupees the fair value of the railway, works, and stores given up. Government may also, by giving 12 months' notice, determine the contract— (i.) on the 31 Dec. 1917 or at the end of any subsequent period of 10 years. In this case the Government undertakes to pay to the Company in rupees a sum equal to 25 times the average yearly net earnings of the Company during the last preceding five years, provided that such sum shall not exceed by more than 20 per cent. the total capital expenditure of the Company, nor be less than such capital expenditure; or (ii.) on the 31 Dec. 1946. In this case the Government will pay to the Company in rupees an amount equal to the total capital expenditure.

APPENDIX No. 44.

Increases in the Sterling Expenditure.

Paper handed in by Sir Henry Waterfield.

(With reference to Question 12,237.)

It would be a very troublesome calculation to attempt in detail to show the exact increase of expenditure since 1884-85 that might possibly have been avoided; and accuracy is impossible. But the following may be taken as an approximate statement of the increase in the sterling payments made in 1894-95 over the payments 10 years before:—

New Obligations.

	£	£
Interest and Discount Sinking Fund	438,863	
Management of Debt	19,932	
New Railway Companies	834,654	
Bengal and Madras Civil Funds (In 1884-85 146,000*l.* on this account was paid as a remittance not charged on the revenue.)	198,337	
Army Effective Charges: Increase of the force by one-sixth	109,000	
Furlough Pay and Superannuation: Payment at fixed minimum rates	131,501	
Zanzibar-Mauritius Telegraph	10,000	
Manning of Defence Vessels	59,600	
Passages of crews for ditto (not covered by the subsidy)	1,048	
Cataloguing records in the India Office	978	
India Office Provident Fund	2,276	
Passage of Assistant Superintendents of Police to India	850	
Technical Instruction of Officers of Indian Marine	931	
Scholarships at the University for Natives of India	1,226	
Brought forward	1,809,196	
Subsidy for Navigation of Karun river	1,000	
Imperial Institute: Grant	1,000	
Medical Delegate at Alexandria	125	
Allowance for Officers studying the Russian language	1,842	
Outfit for Lady Nurses	39	
		1,813,202

Exceptional Payments.

Conversion of Rupee Loans	11,838	
Restoration of a Portrait for Government House at Calcutta	20	
Pay of Officer reporting on Explorations in Kafiristan	382	
Reproduction of the Ajanta Cave Paintings	500	
Medical Delegate at Alexandria: Arrears	250	
Paris Sanitary Conference	149	
Competitions for Design for a Mule Cart	1,229	
Payment in lieu of Royalty on Ordnance Telescopic Sights	833	
Committee on administration of Cantonment regulations	89	
Stores for Special Defence Works	82,176	
		97,466
		1,910,668

On the other hand, there were in 1884-85 obligations to the amount of 62,576*l.* which have now ceased, as well as exceptional payments amounting to 32,274*l.*

APPENDICES Nos. 45 to 65.

SECTION III.

APPORTIONMENT OF EXPENDITURE.

Section III.—Apportionment.

APPENDIX No. 45.

Apportionment of Military Charges between the Home and Indian Governments.

Handed in by the India Office.

No. 1.

No. 70, dated 25th March 1890.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

We have the honour to acknowledge your Lordship's despatches noted below,* on the claims of the War Office against Indian revenues on account of army effective services, for the three years 1885–86, 1886–87, 1887–88. In your Despatch, No. 332, dated 20th December 1888, you mentioned that the claims† exceed the amounts previously stated, and that reductions might be made by Lord Northbrook's Commission. Your Lordship asked for our opinion in respect to the general principles on which the charge to be borne by India for the British troops supplied from England is arrived at by the War Office. With the despatch of 4th July you forwarded a report of the Special Committee at the India Office, and with Despatch No. 216 of the 3rd October 1889, a copy of the War Office claim for 1887–83, and a memorandum by the Accountant-General of the War Office on the method employed in calculating the charges against India. In the latter, or third despatch, you inform us that the report of Lord Northbrook's Commission on the charges for 1885–86 and 1886–87 has not yet been officially received, but that the claims, amounting to 1,543,619*l.*, including deferred pay, will probably be reduced by about 165,000*l.* In continuation of Despatch, No. 216, you forward with your Financial Despatch, No. 235, of the 17th October 1889, further papers from the War Office, giving certain details in explanation of the claims for 1887–88. The charge made against India for that year is 742,101*l.*, as shown below.‡

2. We may explain at the outset that upon receipt of the despatch of December 1888, the War Office claims were examined by the Accountant-General, and the accompanying memorandum was drawn up in the Military Department, but before we were able to submit our conclusions on the subject, your Lordship's subsequent despatches were received; this necessitated a revision of the memorandum, and we are now only in a position to deal with the whole matter.

3. In the memorandum, which we forward for the consideration of your Lordship in Council, the later history of the discussion on the War Office charges against Indian revenues is dealt with; the principles which have from time to time been formulated by the Government of India are stated, and the claims put forward by the War Office are examined. We hope that an examination of the matter set forth in that paper will lead your Lordship in Council to concur in the opinion we have arrived at, that the claim made by the War Office against the revenues of India for the service of the British troops employed in this country should admit of considerable abatement.

4. We proceed first to deal with the principles upon which the War Office base their claims against India; next to indicate the principles which in our opinion should be followed, and lastly to sum up the reductions which we consider should be made. But before doing this, it may be well to recall the fact that this charge for "effective" army services is only a portion of the charge against the Indian revenues on account of the British Army in India. The sum which is directly due to charges on account of the British Army in India is for 1889–90, 903,700*l.* under "effective," and for 1890–91, 850,000*l.*; while under "non-effective" there is a charge for the retired pay, &c., of British troops for service in India, amounting to 283,500*l.* in 1889-90 and 335,000*l.* in 1890–91. In addition to these direct charges, there is the whole of the charge for Her Majesty's Indian troopships, which amounts for 1889–90 to 220,700*l.*, and for 1890–91 to 226,800*l.* The total estimated charge, therefore, for British troops is for 1889–90, 1,411,900*l.*, and for 1890–91, 1,411,800*l.* It will be remembered that this large sum is only for the cost of the training in England of the officers and men sent out annually, for their transport to and from India in ships which are the property of the Indian Government, and for a share of pension charges. Over and above these charges, the Indian revenues bear the entire cost of the British soldier from the day he leaves England until his return, and every item of his arms, clothing, and equipment is paid for by India, besides his pay, maintenance, and training in this country.

5. The principles upon which the claims against Indian revenues are founded may be gathered from the War Office papers, but are more especially set forth in the War Office memorandum of the 26th April 1889, endorsed by the Secretary of State for War. These principles are thus stated: the actual cost to the British Exchequer is the cost of raising, paying, and maintaining the force in the United Kingdom, which would not be maintained if the Indian Army had not to be kept up; all the difficulties in the organisation of the British Army during recent years, and the grants of additional inducements to men to join the army, have been mainly due to the necessity for keeping a largely increased European force in India; the 11,500 young soldiers to be annually despatched to India (excluding the cadres of old soldiers who are exchanged on the relief of a regiment or battery,) form a portion of the 16,000 officers and men maintained in England for the purposes of India, and are the first reserve for the Indian Army in the event of active operations; to avoid the necessity for employing them on Imperial service the Home Government pay nearly 500,000*l.* a year for the Army Reserve; and with the object of providing the force for India as economically as possible, the short-service system has been introduced, a system which is described as most beneficial to Indian revenues, and a mode of calculating the depôt charges has been proposed, which relieves Indian revenues of more than one-third the actual cost incurred; and generally, although the validity of the arguments used on the side of India is not admitted, yet in deference to those arguments, "there has been every desire to treat the "Indian Government with as much generosity as was "defensible."

6. The War Office state that calculating the payment made during the time of the East India Company, taking the period 1834–57, the cost for the service of British troops, at the rates then paid, allowing for improved pay, would now be 530,000*l.* per annum. Further, the War Office assume that the real annual cost of the troops (16,000) maintained in England for Indian purposes is 1,081,000*l.*

The proposal of the War Office is, that—

(1.) India shall pay 600,000*l.* annually.

(2.) A deduction of 50*l.* to be made for every man deficient on the Indian establishment on the 1st May.

(3.) A direct charge to be made against India for deferred pay.

The conclusion is, on the side of the War Office, that although the charge for the depôts is built up artificially, the result—surrendering nearly 500,000*l.* to the Indian Exchequer—is so favourable to the Indian Government that no force can be allowed to criticism upon

---

* No. 332, dated 20th December 1888. No. 144, dated 4th July 1889. No. 216, dated 3rd October 1889. No. 235, dated 17th October 1889.

† | | £

Deductions for men short trained, or more than one year's service, for men transferred to Home service from depôts, and for men returning from India for service with colours or reserve	120,642
£742,101

minute details, and that no further diminution of the claim can be consented to.

The result would be that the annual claim against India for army effective services, when the item of deferred pay reaches the normal amount 211,000*l.*, would amount to 811,000*l.*

7. The actual cost to the British Exchequer, if calculated by a purely arithmetical method, is undoubtedly the cost of the force in the United Kingdom, which would not need to be kept up if the Empire of India did not exist, and no army had to be maintained in India; but it is nowhere proved that the charges raised on account of that force represent the actual extra cost to the British Exchequer, while there are many other conditions which would have to be considered before this method of calculation could be accepted. The difficulties in the organisation of the British Army, and the necessity for inducing men to join the army, cannot be admitted to arise from the presence of a portion of the army in India. These difficulties, we apprehend, arise from a variety of causes, which have no direct relation to India; and in India Office Letter No. 161 W., dated 21st March 1876, Lord Salisbury distinctly declined to accept the contention of the War Office on this head. Nor can we accept without question the statement that the Indian drafts are the first reserve for the Indian Army, and that in order to avoid employing these elsewhere, the Home Government pay 500,000*l.* a year for the army reserve. In the first place, it must be pointed out that the regiments, batteries, and drafts, sent out to India are despatched during the whole of the trooping season to supply the places of men being sent home discharged to the reserve or invalided, and to make good the annual waste of life; so that the assumption of the War Office, in assuming that these 11,500 men referred to in paragraph 5 will be efficient as a "first reserve" for India, could hold good only if war were imminent at a particular moment before the commencement of the trooping season. If war broke out after the trooping season had closed, say after the 1st May, a much more probable date under certain contingencies than the beginning of winter, these 11,500 men would not be available as a "first reserve." In the second place, Mr. Stanhope informed your Lordship in War Office Letter No. 40,116-639, dated 14th February 1888,* that it was "far from "improbable that the same circumstances which "necessitated a mobilisation in India might also "render it impossible for this country to part with "any considerable portion of the small number of "regular troops in the United Kingdom." We infer from this statement that India cannot reckon with certainty on receiving even these 11,500 men in case of emergency. If this inference be correct, then it seems to us, it cannot be alleged with accuracy, that the reserve is kept up because the services of these 11,500 men are hypothecated to India, and generally, it appears hardly reasonable to assume that in regulating the strength of the reserve of the British Army, the annual drafts for India, which are raised for the most part between May and November and sent out to India during the winter; have been or ought to be considered in fixing the strength of the army reserve. We do not understand that 16,000 men are kept up all the year round, and the army reserve was instituted in order to give the British Army a reserve of trained soldiers, and to enable a reduced army to be maintained at home; the interests of India were in no way especially considered.

8. The statement made by the War Office, that one of the objects of introducing the short-service system was to provide the force for India as economically as possible, and that it is a most beneficial measure to Indian revenues, is an important one, and needs to be dealt with at some length. We may first observe that the short-service system was established because men could not be obtained, or could not be obtained under existing conditions, under the long-service system, and that the Government of the day believed that short service with reserves was better suited to the circumstances of the times than the existing system. It was no consideration for the efficiency of the army in India that evoked the short-service system, and its suitability to the conditions of Indian requirements has been gravely questioned on more than one occasion. The subject was discussed between the India Office and War Office in 1876, and the then Secretary of State for India, the Marquis of Salisbury, expressed in the India Office letter of the 21st March 1876,† to Mr. Gathorne Hardy "his reasons for apprehending serious detriment "to the public interest, and specially to the security "of our Indian possessions, from the application of "the regulations in question to the British soldiers "in that country." The defects of the system were fully explained in the letter, and Lord Salisbury pointed out the directions in which changes were necessary.

9. In reply to this representation, Mr. Hardy furnished Lord Salisbury with a report by a committee, presided over by Lord Cadogan, which had been appointed by the War Office to consider the question of modifying the short-service system to meet the requirements of military service in India. The proposals of this committee were referred to the Government of India for opinion,‡ with the Secretary of State's Despatch No. 180, dated 13th July 1876. Sir Henry Norman, then a member of the Council of the Governor-General, in a minute dated 1st November 1876, reviewed the opinions of the various distinguished and experienced officers who had been consulted, and placed on record his own views on the question. The modifications suggested by Lord Cadogan's Committee were not considered sufficient to meet Indian requirements, and Sir Henry Norman indicated the arrangements which seemed to him to be absolutely necessary for the purpose of providing efficient soldiers for India under the short-service system. The Government of India concurred in Sir Henry Norman's minute, and transmitted it to the Secretary of State for consideration.‡

10. Lord Salisbury, in renewing the discussion with the War Office, said that there was a limit beyond which the Government of India could not go in military expenditure,§ and that to accept the proposals of Lord Cadogan's Committee as they stood, would be to go beyond that limit. His Lordship protested against the already overtaxed Indian military budget being burdened with new charges through the working of the short-service system as proposed by that committee, and suggested certain modifications in connection therewith. The Secretary of State for War, however, decided to first test the effect of clause 189 of the Army Circulars of 1878,‖ which he said had been prepared for the purpose of carrying out the wishes of the India Office on this subject, so far as could be done consistently with Imperial interests. This action was not considered sufficient, and a further communication¶ was made to the effect that "it is with extreme regret "that the Secretary of State for India in Council "learns the decision of the War Office on the repre-"sentations made by the Government of India more "than two years since." It was added that "the "measures now put forward as comprising all that "can be done towards meeting those views are, in the "opinion of the Secretary of State for India in Council, "quite inadequate," and the necessity for some further steps in the matter was again urged on the Secretary of State for War. The outcome of this last protest was that the War Office** at length consented to make certain modifications in order "to meet the just claims, "both financial and military, of the Indian Govern-"ment, without unduly burdening the Imperial "Exchequer, or injuriously affecting the formation "and maintenance of an adequate body of first-class "reserves" in England, a matter to which, it was said, Her Majesty's Government attached the highest importance. These modifications were to secure that (1) no man should be embarked who had not served for six months, and was not 20 years of age, or of the physical standard of that age; (2) that a tour of seven years' Indian service should be obtained from every man.

11. It will be seen from the above that so far from the short-service system having been introduced in the interests of India, strong objections, both financial and military, have from time to time been raised against its application to this country. Nearly ten years ago the Indian Army Commission of 1879, composed of civilians and British and Indian Officers of the highest standing, recorded their opinion as follows:

(Para. 183.) * * * "The recent change in the system of recruitment for the British Army, under which soldiers are engaged for short terms

* Secretary of State's Despatch No. 119, dated 17th May 1888.

of six years, has caused great extra expense for recruits and for homeward passages of time-expired soldiers; while the short-service system, as now administered, has materially impaired the efficiency of British regiments in India, by maintaining a constant stream of boy-recruits who succumb to the Indian climate, and by substituting youthful non-commissioned officers for the seasoned and experienced sergeants and corporals of former days.

* * * (Para. 209.) "It has been already mentioned that the short-service system recently introduced into the British Army has increased the cost, and has materially reduced the efficiency of the British troops in India. We cannot resist the feeling that, in the introduction of this system, the interests of the Indian taxpayer were entirely left out of consideration. It is absolutely necessary, if Her Majesty's line regiments are to continue to be employed in India, that the injury done to this country by the change of system should be promptly remedied; and we therefore have no hesitation in recommending that until the short-service system, as at present administered, be altered, no soldier under three years' standing be embarked for service in India; that no men be allowed to proceed to India who have not extended their service with the colours to a period of nine years; that any men, or non-commissioned officers, who may desire to remain in India may be allowed to volunteer, on a bounty, for a further period of six years' service with the colours in India, and may be permitted to join any battalion with not less than six years' service in India before it."

12. The average service of men in India was originally calculated by the War Office actuaries at $5\frac{4}{21}$ years, and it is probably not more than six years at the outside, taking the whole of the men who come out. And, although sanitary improvements—better barracks, the creation or development of hill stations for the troops, improved water-supply and drainage—executed at great cost to Indian revenues, have done much to reduce the percentage of deaths and invaliding, the fact remains that the soldiers sent to India are too young, and that they are therefore unduly subject to climatic effects. In support of this opinion we may quote the following passages from the Report on Sanitary Measures in India in 1887–88, presented to both Houses of Parliament, 1889. With regard to the influence of age and length of residence in India upon the invaliding of British soldiers, it is mentioned at page 4 of the report that "49·41 per cent. of the number "(invalided) were under 25 years of age, against "43·92 in 1886, while 25·02 per cent. had been less "than two years in India, and 52·88 per cent. had "from two to five years' service. In the whole army "73 per cent. of the men had not more than five years' "Indian service, and 77·90 per cent. of the total "number invalided had been less than five years in "India." At pages 50–53 of the appendix to the report, Surgeon-General Sir Benjamin Simpson remarks as follows:—

"Enteric fever is the most fatal of all the diseases to which the European soldier in India is liable. The ratio of mortality from this cause is much higher than that from cholera." * * * * "the high average mortality is shown to be due to the large proportion of young men under 25 comprising the bulk of the European Army in India, and the short-service system which permits of an excessive number of youths being passed into service in a sub-tropical climate at a period of life when they are most susceptible to particular diseases, and specially to enteric fever."

Pensions are reduced under the short-service system, but the loss by mortality and invaliding, the increase in the number of passages to be provided, deferred pay and other inducements to serve, go a long way to counterbalance any economy. But if we were to admit, which we cannot do, that a short-service army for India costs less than a long-service one, it can hardly be said that immature soldiers are as effective for service in India as men of a higher average of years and service, and while "the cost of the recruit has "been increased, the term of his service has been "diminished. India, therefore, for a larger charge, "receives a less service." (Despatch to the Secretary of State, No. 94 of 1873.) We do not desire to pursue this part of the subject further, but we have felt it our duty to protest against the proposition of the War Office that one of the reasons for the introduction of the short-service system was to provide the force for India "as economically as possible."

13. In respect to the mode of calculating the depot charges, which it is said relieves our revenues of more than one-third of the actual cost, we need only invite attention to paragraphs 28 to 37 of the memorandum attached. The total cost to India of the depots is 359,597*l.* for 1887–88; the cavalry depot at Canterbury alone cost India 93,310*l.*, and supplied 410 men to Indian service.

14. We do not propose to discuss at any length the hypothesis put forward by the War Office, that the real cost to the English Exchequer of the 16,000 men maintained in the United Kingdom for India is 1,081,000*l.* per annum. If the details be examined, it will be seen that they are not based upon actual numbers or conditions, and the mode of calculation employed cannot therefore be accepted. Moreover, until the principles upon which the calculations are made are proved to be correct, it is superfluous to examine hypothetical details. Similarly, the statement that certain rates were paid in 1854–57, and that on these rates the present establishment would cost, allowing for increased pay, 530,000*l.*, does not appear to be material. We think we have clearly shown that the principles supported by the War Office cannot be accepted, and it does not seem necessary to discuss the details of the hypothetical cost of the 16,000 men.

15. For a lengthened examination of the principles upon which we conceive the claims against India should rest, we must refer your Lordship in Council to the memorandum forwarded herewith and to the various despatches in which the views of successive Governments of India have been expressed. We may especially lay stress on the fact that the Indian Army supplies a great addition of military power to England, that a large part of the British Army is trained at the expense of India, and that the whole of the men passed into the reserve from the 70,000 troops in this country have been maintained entirely out of Indian revenues from the date of their first recruitment. It is true that on the men joining the reserve their pay is henceforward charged to the English estimates, but this forms a very small part of the whole expense which has been incurred on their account, and therefore it will be seen that India contributes largely to the maintenance of a force which is not available for Indian requirements. This consideration alone will show how necessary it is to deal with this subject in a different spirit from that adopted in the War Office papers. The guiding policy in this matter should be that of true reciprocation, and the expenditure charged by England should be limited not by arithmetical details, but by statesmanlike and broad appreciation of the conditions of the two countries.

16. In proceeding to comment upon the various charges, it is impossible to avoid the conclusion arrived at in the memorandum, that the capitation rates and depôt charges are in excess of reasonable amounts, and that the minor charges, aggregating to a large sum, are beyond what should properly be made. We will now deal with these briefly in order, but for the details must refer your Lordship to the paragraphs of the memorandum quoted—

* (i.) The Government of India on more than one occasion have objected to the largeness of the capitation rate, and reasons are given in the memorandum why a considerable reduction should be made.

(ii.) The depôt charges are dealt with in paragraphs 28 to 37, and we think it will be admitted that the depôts are organised on a scale far larger and more expensive than is warranted by Indian requirements, while there is evidence to show that India does not receive trained soldiers. In this connection, we would invite your Lordship's attention to the despatch of Lord Northbrook's Government, No. 94, *Military*, of the 15 May 1873, and specially to the following passage, in paragraph 15 of that despatch:—"Soldiers discharged from Indian "service will therefore be of no further value "to India, but they will form a highly trained "and valuable portion of the home reserves.

* The numbers are those referring to the claims for 1885-86 and 1886-87 as dealt with in the memorandum attached. Paragraphs 22 to 27.

"If the whole cost of their recruitment and "training be charged to India, while so "valuable a portion of their service is devoted "to Great Britain, the revenues of India will "indirectly be made to contribute towards the "military expenditure of Great Britain, a "course which would be contrary to law and "to the policy of the Imperial Government."

(iii.) The agency charges should be withdrawn, paragraph 38.

(iv.) India should not be charged for men who deserted, died, or were discharged with less than one year's service.*

(v.) In paragraph 40 of the memorandum, the reasons are given why Indian revenues should be relieved of a portion of the charge for the maintenance of young officers serving in England before embarking for India.

(vi.) In the same way we may ask that India should be relieved of a portion of the cost of young officers of Royal Engineers at Chatham.†

(vii.) Indian revenues should not be charged for the employment of lieutenant-colonels of Royal Engineers at home, seeing that the War Office not long since laid great stress on their want of officers of this rank for home service.‡

(viii.) The charge for the training of veterinary surgeons is a small one, but should be withdrawn, as these officers are employed in England before they come to India, and we might as reasonably charge the War Office for the more extensive training veterinary surgeons receive while in India before they are re-transferred to the home service.§

(ix.) We consider that the cost of examining candidates for the Indian Medical Service should be reduced.‖

(x.) The cost of the educational establishments and the charges which are made against Indian revenues on their account are dealt with in paragraphs 45 to 52 of the memorandum. The charges are larger than they should be, and sufficient reasons are given for their reduction to a considerable extent. The mode of calculating the charges is not a fair one to India. Indian revenues should not be called upon to pay interest on such items as the purchase of part of Woolwich Common and of Sandhurst Estate in 1804; and generally the charges should be made with a just appreciation of the fact that the establishments have to be kept up, whether the officers of the Indian Army are educated or not in these particular institutions, and that India does not charge the War Office for the schools of instruction in India.

(xi.) Advance of pay.—No remarks.

(xii.) and (xiii.) The charge for men awaiting discharge, and for invalids returning from India, and for the hospital and discharge depôts, amounts for 1887–88 to close upon 50,000*l.* Reasons are given in paragraphs 54 and 55 of the memorandum for thinking that these charges are placed on a high scale. The charges appear to be estimated and not actual charges; and it would be as logical for India to ask the War Office to pay for men who land sick in India, or to charge for the cost of the military hospitals and the depôt at Deolali, as it is for the War Office to charge these excessive amounts upon the invaliding and discharge of men returning from India, it being borne in mind that no rebate is allowed for a man arriving from India if he is discharged as an invalid.

(xiv.) For various reasons¶ a rebate is allowed by the War Office on the capitation. The Government of India have protested on several occasions against the inadequacy of the rates proposed by Mr. Bouverie's Committee, but these are more favourable than the rates which have been adopted by the War Office, and although it is contemplated that the average Indian service to be got from each soldier should be seven years, it is well known that this is not obtained, and a liberal allowance would probably be six years.* Consequently, every effective infantry soldier who enlists for 12 years with the colours and reserve serves the War Office for one-half of his service, and although the latter part of his service is passed in the reserve, that is no reason why India should not have a proportionate rebate on the capitation originally paid. As pointed out before, under the short-service system a great part of the reserve of the British Army consists of men whose entire military training is acquired at the expense of the people of India. We consider, therefore, that one-half should be allowed by the War Office as a rebate on the capitation rate, and further, that this should be calculated not merely upon certain charges included in the capitation, but upon the charges for the depôts as well, that is to say, the rebate should be made on the sums actually paid by India for every soldier embarked, and this rebate should be one-half instead of one-third. If, however, the charges against India are regulated in future according to the plan we propose, the question of rebate will not arise.

(xv.) In respect to deferred pay, which will gradually increase to 211,000*l.* per annum, according to the War Office actuaries, or 3*l.* per man per annum on the British establishment in India, we are unable to determine whether this charge is based on actuals.† Deferred pay was one of those charges which were imposed upon India without the consent of our Government; and the claim is apparently based upon the calculation of the amount earned by service in India, added to the amount earned during the period of training chargeable against India. It is possible that some reduction might be effected if the mode of calculation is examined, as we observe that a separate charge for deferred pay is made in the amounts claimed on account of the depôts.

17. To sum up, the reductions which appear to be justified as proposed in the memorandum, taking the the year 1887–88 as an example, would be as follows:—

——	War Office Claim.	Reduction.
	£	£
*1. Capitation on troops embarked for India.	230,823	100,000
2. Charges for depôts	359,597	100,000
3. Agency	3,763	3,763
4. Charges for men deserted, died, or discharged.	8,766	8,766
5. Maintenance of young officers in England previous to embarking for India.	8,500	3,000
6. Cost of Royal Engineer officers while under instruction.	5,415	2,700
7. Cost of training veterinary surgeons	600	600
8. Cost of examining candidates for Indian Medical Service.	432	200
9. Educational establishments	45,187	15,186
10. Advance of pay	9,708	—
11. Expenses of men awaiting discharge, &c.	19,197	10,000
12. Share of cost of hospitals and discharge depôts.	30,425	16,000
	722,713	260,215

* These numbers refer to those in paragraph 1 of this Despatch.

The reductions as stated in Annexure A. to this Despatch should be—

For 1885–86, 268,916*l.* on a charge of 770,497*l.*
„ 1886–86, 275,640*l.* „ 641,712*l.*
„ 1887–88, 260,215*l.* „ 722,713*l.*

The total sum to be deducted from the aggregate claims of the War Office for these three years would, therefore, be 804,771*l.*, but this amount would be subject to some reduction, as certain credits would be due to the War Office on account of a lesser rebate being given on the reduced claims.

18. The charges for the year 1887–88, as above set forth, are about 722,000*l.* exclusive of deferred pay. From this a rebate is made of about 120,000*l.*, leaving

* Paragraph 39. † Paragraph 41. ‡ Paragraph 42.
§ Paragraph 43. ‖ Paragraph 44.
¶ Deductions for men short trained or more than one year's service, for men transferred to home service from depôts, and for men returning from India for service with the colours or reserve.

* Paragraph 56. † Paragraph 57.

the net charge at about 600,000*l.* The reductions which we have suggested in this charge may be set down in round numbers at 260,000*l.*, leaving a proper net charge of 340,000*l.* The reductions proposed (260,215*l.*), although affecting the rebate of 120,000*l.*, will not materially alter the net War Office claim, as explained in paragraph 60 of the memorandum, which, according to our view, may equitably be taken at 350,000*l.*

19. The correspondence which has taken place during past years upon the subject herein dealt with, and the considerations set forth in this despatch, show the difficulty of arriving at a settlement of these accounts, based upon considerations and assumptions which are necessarily in a great measure hypothetical and open to question. It appears, therefore, very desirable that for the future the payments to be made by India for the British troops serving in this country should be determined by a capitation rate. The reduced amount, 350,000*l.*, would represent, with the present established strength of 70,000 British troops in India, a capitation rate of 5*l.* per man, which accordingly we recommend should be taken as the basis of calculation in the future, this rate to be calculated on the actual strength of the British Army in India on the 1st of May in each year, that is, after the reliefs have been completed and the drafts of the year have all arrived in the country, and before the establishment has begun to be reduced by casualties. It is, therefore, a date most favourable to the British Exchequer. In addition to this capitation rate there would be also a direct payment to be made in India on account of deferred pay, the estimated amount of which will eventually be as much as 211,000*l.*

20. We are aware that our opinions are not likely to be acceptable from what may be called the departmental point of view. It is natural that departments charged with the interest of the whole, or a portion of, British finances should repudiate any but a strict and limited view of the question. The Treasury have lately declined to consent to an arrangement regarding the charge for the fortifications at Aden, which your Lordship and the Secretary of State for War considered perfectly just; in another case, the War Office have been informed by your Lordship that for 20 years the payments by India for military stores have been made under protest because the rates are excessive, and that India is ready to submit to any impartial tribunal; to this arbitration the War Office will not consent. From time to time the Government of India have challenged the conclusions arrived at by various committees, the Secretary of State for India has protested against proposals which have been made by these bodies, the Treasury* itself has allowed that a time might come when India would be forced to ask for relief from a portion of the home military expenditure; and Lord Northbrook's Commission has been engaged for many years in endeavouring to settle the charges made by the War Office. But no real diminution of these charges has been effected. We cannot, therefore, hope that the claims of India will be heard unless your Lordship in Council can move Her Majesty's Government to deal with the question as an Imperial one. We trust that this may now be done, and that, with the valuable and powerful aid which we feel confident Lord Northbrook and his colleagues will give to the consideration of this question, a conclusion may be arrived at which will be fair to both sides.

21. The revenues of India have been charged with the cost of many changes in organisation not specially necessary for the efficiency of the army in this country, and with the cost of troops employed on Imperial service beyond the limits of India. Millions of money have been spent on increasing the army in India, on armaments and on fortifications, to provide for the security of India, not against domestic enemies, or to prevent the incursions of the warlike peoples of adjoining countries, but to maintain the supremacy of British power in the East. The scope of all these great and costly measures reaches far beyond Indian limits, and the policy which dictates them is an Imperial policy. We claim, therefore, that in the maintenance of the British forces in this country a just and even liberal view should be taken of the charges which should legitimately be made against Indian revenues.

22. In conclusion, it is imperative, in our opinion, that this long standing question should be settled, and that the people of India, who have no voice in the matter, should not be able to complain that an excessive military tribute is demanded from the revenues of this country, while, on her side, England, with whom rests the final decision, should be able to show that this settlement has been effected in a spirit of justice and consideration to India.

* Treasury Minute, 2nd July 1878.

MEMORANDUM prepared in the Military Department of the Government of India on the War Office Claims against Indian Revenues for Army effective Services.

From Secretary of State, No. 332, Financial, dated 20th December 1888.
From Secretary of State, No. 144, Financial, dated 4th July 1889.
From Secretary of State, No. 216, Financial, dated 3rd October 1889.
From Secretary of State, No. 235, Financial, dated 17th October 1889.

The revised claims made by the War Office on account of army effective services for the years 1885–86 and 1886–87, were forwarded with the Secretary of State's Despatch, No. 332, dated 20th December 1888, for the information of the Governor-General in Council. These claims exceeded by 24,627*l.* the amounts previously stated; but Lord Cross said that it was possible that considerable reductions might be made by Lord Northbrook's Commission in the examination of the charges, and that he was in hopes that a capitation rate might be fixed in the adjustment of the charges for these and subsequent years. Finally, he asked for the opinion of the Government of India as to the general principles on which the charge to be borne by India, in respect to the European troops supplied from England, is arrived at by the War Office. The information which has been supplied, although not complete, is sufficient to enable the Government of India to express their opinion regarding the principles upon which these charges are founded. The Secretary of State has also in his possession at the India Office a series of despatches* in which the Government of India have from time to time expressed their views on the manner in which the War Office claims are raised against Indian revenues.

2. The report of the Special Committee at the India Office on home charges (military payments) is forwarded with Despatch, No. 144, of the 4th July, and has been of much value in the discussions of the questions at issue. The Secretary of State's Despatches, No. 216, of 3rd October 1889, and No. 235, of 17th October 1889, give further information in respect to the claims for 1887–88, and the principles on which these are based.

It may be convenient, at the outset, to state the total home charges, on account of the army in India, as estimated for 1889–90 and 1890–91.

The effective and non-effective charges in 1889–90 and 1890–91, are as follow:—

	Revised Estimate, 1889–90.	Estimate, 1890–91.
Effective.	£	£
Home charges of British forces serving in India.	968,700	850,000
Furlough allowances of officers of the Indian service.	205,000	205,000
Indian troop service	220,700	226,800
Passage of officers and troops otherwise than in troopships.	4,700	5,800
Miscellaneous	18,500	21,000
Stores for India	707,800	1,210,200
Total effective	2,060,400	2,518,800
Non-effective.		
Retired pay, &c., of British forces on account of service in India.	288,500	335,000
Pay and pensions of non-effective and retired officers of the Indian service.	1,665,000	1,700,000
Miscellaneous pensions, including those from Lord Clive's Fund, &c.	95,000	94,000
Indian Military Service Family Pensions	12,000	13,000
Total non-effective	2,060,500	2,142,000
Total effective and non-effective	4,120,900	4,660,800

The present memorandum deals only with the home effective charges of British forces serving in India.

3. It is proposed to give a brief outline of the later history of the demands upon Indian revenues for the service of that portion of the British Army which is stationed in India, and it will be necessary to re-state the principles which the Government of India have considered should rule the relations between England and India, and then to examine the particular charges in order to determine whether they are founded on correct principles, such as should govern the relations between the Imperial Government and the dependent empire.

The Later History of the Discussion on War Office Claims.

4. The report of the India Office Committee, alluded to in paragraph 2, also recites the narrative of past proceedings and describes the present position. We have, therefore, firstly, the various despatches in which

* Military Despatch, No. 94, dated 15th May 1873. Financial Despatch, No. 406, dated 22nd September 1874. Military Despatch, No. 63, dated 10th March 1876. Financial Despatch, No. 66, dated 8th February 1878. Financial Despatch, No. 96, dated 21st March 1879.

the question of these charges has been discussed, with the reports of Home Committees; secondly, the report of the Special Committee on Home Charges at the India Office; and thirdly, the present papers. The narrative of the question need not, therefore, be repeated at any length, but it will be well to mention the features of the late history—

In 1883 the Secretary of State forwarded, for the information and guidance of the Government of India, a "memorandum of arrangement* between the India "Office and the War Office, showing more particularly "the transactions excluded from the payments by the "India Office to the Treasury for effective and non-"effective services generaliy, and the charges and "credits which are to be matters of account between "the departments and the mode of their adjustment." This memorandum† applied to the period from 1st April 1879 to 31st March 1883. In 1884 a fresh memorandum was issued, which was to have effect from the 1st April 1883 until further notice, but this was revised in 1886.

As Lord Northbrook's Commission has not yet been able to make a final report‡ in respect to the basis on which payments should be made by Indian revenues on account of the effective Home charges of British troops serving in India, Lord Randolph Churchill suggested to the Treasury in 1885 that the Commission should be requested to report the amount which it would be fair to fix in respect of each of the years 1882–83, 1883–84, and, if possible, 1884–85, pending the submission of their complete report on the whole question. Both the Treasury and the War Office having agreed to this proposal, Lord Northbrook was asked by the Treasury to report on the point.

On the 28th December 1885, Lord Northbrook's Commission reported‡ that the sums payable by Indian revenues for the Home effective charges of the British troops serving in India, excluding deferred pay, would be—

	£
For the year 1882–83 - -	416,971
,, 1883–84 - -	416,628
,, 1884–85 - -	421,000

The Secretary of State for India accepted this report,‡ and informed the Government of India that the further claims of the War Office, on account of deferred pay, for this period, would be dealt with hereafter.

After several inquiries by the Government of India as to whether any final settlement had been made of the War Office claims for the years 1882–83, 1883–84, and 1884–85, the Secretary of State forwarded, on the 15th December 1887,§ correspondence showing that the investigation suggested by Lord Northbrook's Commission of the War Office claims on account of deferred pay for that period had now been completed, and that those claims, together with the War Office claims for 1885–86 and 1886–87 (including deferred pay), would be referred to the Commission for report.

The Commission having considered the claims on account of deferred pay for the three years ending 1884–85, reported on them on the 31st July 1888,‖ and their conclusions have been accepted by the Treasury.

In the above-quoted report the Commission remarked as follows:—

"It now remains for us to ascertain the payments to be made by India in respect of all effective charges, including deferred pay, for the years 1885–86 and 1886–87, and to endeavour to establish a permanent basis on which the payments for future years may be calculated."

Revised claims have, however, since been submitted for these years,¶ in which the War Office explain how the claims have been arrived at, and these explanations form the subject of the present reference from the Secretary of State.

With the Secretary of State's Despatch, No. 216, dated 3rd October 1889, was forwarded the War Office statement of claims for 1887–88, amounting to 740,105*l.*, and in a subsequent Despatch, No. 235, dated 17th October 1889, the details of this claim, which had been raised to 742,101*l.*, were furnished. In the former despatch it is stated that the Report of Lord Northbrook's Commission on the charges for 1885–86 and 1886–87 has not yet been officially received, but the claims, which amounted to 1,543,619*l.*, including deferred pay, will probably be reduced by about 165,000*l.*

The claim for the year 1887–88 differs from those for the preceding years in the following respect:—

(*a.*) The whole cost is charged of the cavalry depôt and the depôts of the horse and field artillery, instead of, as heretofore, the cost of the staff employed at the above depôts, with a capitation rate for each recruit sent out to India.

At the same time an allowance has been made for every man transferred from these depôts to serve with regiments or batteries on the Imperial Establishment.

(*b.*) A reduction is made in certain cases from the full capitation rate for men despatched to India either before the completion of the training period or with more than one year's service.

(*c.*) The rebate allowed for men returned for further service with the colours or reserve, in the case of the cavalry, horse, and field artillery, is calculated on the cost of a recruit for one year instead of nine months.

With the latter despatch is forwarded a confidential memorandum by the Accountant-General at the War Office, proposing the basis on which these claims should for the future be settled.

The proposal is—

(1.) That the Indian Government shall pay a contribution of 600,000*l.* a year in quarterly instalments on account of the Home charges stated.

(2.) That for every man deficient in the establishment of the army in India, on 1st May in each year, a deduction of 50*l.* shall be made from the quarterly instalment next due.

(3.) That a direct charge be made against the Indian Government for deferred pay.

The Secretary of State for War concurs in the opinions expressed in this memorandum.

It is known what basis the Commission proposes to adopt; and although it is probable that the claims for 1882–83, 1883–84, and 1884–85 (which have now been so far settled by Lord Northbrook's Commission), were prepared by the War Office on the same principle as those for 1885–86 and 1886–87, there is nothing to show whether the Commission accepted those principles or have formed their conclusions on other grounds.

Recently the War Office remarked,* in connection with another case, that "the basis of the effective "charge against India is, and has been since the year "1875, the calculation made by the Committee over "which the Right Hon. E. P. Bouverie presided." The proposals of that Committee will be found in the enclosure of the Secretary of State's Financial Despatch, No. 454, dated the 9th September 1875. Notwithstanding, therefore, the objections raised by the Government of India in their Military Despatch, No. 63, of 10th March 1876, against the proposals of that Committee, it would seem that, with the exception of some slight modifications here and there, they have been adopted in the past, and form the basis for the calculation of the Home effective charges in the future. This is a point of great importance, and should be carefully borne in mind in the consideration of the claims.

The Principles upon which the Claims should be based.

5. Having thus traced the later history of the claims, we may proceed to consider the principles upon which they should be founded. It is now just over a century since an Act of Parliament† legalised the charge upon the revenues of India for the expenses incurred in raising, transporting, and maintaining such forces as were sent to India for the security of the territories and possessions of the East India Company; and in 1793 it was enacted that all sums issued on account of his Majesty's forces serving in India, or for raising and supplying recruits for the same, should be repaid by the East India Company, and that the actual expenses for the support and maintenance of the troops should

† Act 28, Geo. III., cap. 8.

be borne and defrayed by the Company. The interpretation of these Acts, upon expansive but not liberal principles, so far as India is concerned, with a strict and literal adherence to the words of their provisions, has been the *fons et origo* of the long discussion which has taken place between the War Office and the India Office on the part of the Government of India. It has been forgotten that the provisions of these Acts deal with conditions long since passed away, with a comparatively trifling sum of money drawn from an Eastern country which had at that time few recognised claims for moral and material improvement, and that the East India Company and its army, although controlled in a measure by England, was the separate administration by a Company of a large and distant Empire. Many committees have considered the question under discussion. In some cases the recommendations would have thrown an excessive burden upon Indian finances, and in those instances, in which their opinions were accepted, the result has been to heighten the charges which are made by the War Office. In 1871 the Secretary of State himself protested against the rates arrived at by Sir Thomas Seccombe's Committee, which submitted no less than five reports.

In 1872 the Secretary of State for India pointed out to the Secretary of State for War that England borrowed troops from India more often than India borrowed them from England, and that when troops were lent from India the Imperial Government did not usually pay for them, while India was called upon to pay the uttermost farthing, and he further dwelt upon the fact that under the short-service system, a great part of the reserve of the English Army would consist of men whose entire military training was acquired at the expense of the people of India. In the meanwhile, the Government of India, in their Despatch No. 94, of 15th May 1873, also protested against the rates arrived at by the above-mentioned committee; but no results were obtained from this correspondence, nor were any general principles arrived at for the limitation of the claims of the Imperial Government on the revenues of India.

6. The Select Committee of the House of Commons on East India Finance reported, on the 27th July 1874, that they had received an impression that charges were imposed on India which ought to have been borne by England, and that some of the witnesses had admitted, in their evidence, that India had been called upon, for a considerable time, to pay at an unnecessarily high rate on account of some of the charges connected with Her Majesty's forces in India. Another Committee was appointed, known as Mr. Bouverie's Committee, which reported in 1875. The Government of India again objected, in 1876, to the rates fixed by this committee. Previous to this, however, the Government of India had, as mentioned above, in their Despatch, No. 94, dated 15th May 1873, taken strong objection to the three reports of the joint committee appointed by the India and War Offices. They assumed that the sums claimed by the War Office from India should only comprise the actual expenditure entailed in raising and equipping troops for India, and that the contribution levied on this account should not be based on the cost entailed by the distribution of troops at Home, made for Imperial purposes and not necessary for the provision of troops for India. It is necessary to bring this particular point to notice, because it will be found in the papers which have been received from the Secretary of State, that there is good reason to believe that the remarks made in 1873 in respect to the expense of the depôts must be repeated in 1889. The Government of India pointed out that when recruits were enlisted for long service, India had the advantage of their services for many years; that the cost of the recruit had been increased; that under the short-service system the term of his service has been diminished; that India for a larger sum received a less service; and that by the introduction of the reserve system Great Britain was enabled to diminish the strength of her Home battalions, and the revenues of India were indirectly made to contribute towards her Home military expenditure.

7. But perhaps the fullest exposition of the principles which should govern the relations between India and England, on this question was made in Financial Despatch, No. 66, dated 8th February 1878. In that despatch the great increase in the Home charges, practically controlled by the War Office, was pointed out, and it was shown that these were mainly due to important changes in the organisation of the British Army; that the sums demanded from India have been gradually increased; and that intolerable delay took place in the settlement of the claims. The Government of India of that day were constrained to represent to Her Majesty's Government that the burden thrown upon India on account of the British troops was excessive, and beyond what an impartial judgment would assign, considering the relative material wealth of the two countries and the mutual obligations which subsist between them. They showed that it was certain that England, on its part, had derived many great advantages from her connexion with India; that India had for many years supplied a field for the practical instruction of the army—instruction which could not be elsewhere obtained; that the army of India is a most efficient reserve of strength, maintained without expense to England, which could be rapidly and extensively increased for operations out of India. The sea transport, provided and maintained by India, furnished England with a useful adjunct to its resources; and they declared that it was not just that the relations of the two Governments should be governed only by the ratio of the number of men employed by each. The Government of India rejected the principle of a rateable distribution of the charges, and they appealed to the British Government for an impartial review of the relative financial capacity of the two countries to bear the charges arising from the maintenance of the army of Great Britain and for a generous consideration of the share to be assigned by the wealthiest nation in the world to a dependency so comparatively poor and so little advanced as India. The question was, they urged, to be decided, not by the mere rules of arithmetic, but on broad and statesmanlike views of public policy, which should fairly adjust the claims of England to the capacities of India.

8. In 1879, the Government of India again reiterated their opinion* that the capitation rate for effective services could not be fixed merely on a consideration of the number of troops serving in India or of the recruits supplied for that service, but must be settled with some regard to the advantages which Her Majesty's Government derive from the maintenance of a large army, both British and Native, in India, which in time of need has often been available as a reserve for Imperial purposes, and from the presence in England of officers and men connected with the depôts of British regiments and batteries. They were further of opinion that India should not be charged with any Home expenditure which is not an actual extra expense, arising from the employment of British troops in India; and they considered that the Home charges should be assessed on broad principles of mutual advantage to England and to India, rather than on mere statistical and arithmetical details.

9. The keynote of the difficulty, a difficulty which has caused an excessive burden to be thrown upon the revenues of India, is sounded in the Treasury Minute of the 2nd July 1878.† In this minute the Treasury speak of the Imperial and Indian Governments as *quasi*-independent powers; that there is no generally accepted definition of Imperial, as compared with Indian, services; and that there is, therefore, a disposition on the part of the authorities on each side to advance claims which those on the other side cannot accept; and in fact that the question whether the Imperial Government demands too much from India, is justified or not, according as the limit of Imperial duty to India is extended or contracted. Colonel Stanley, who was Financial Secretary to the Treasury in 1877, pointed out that the tendency of the various changes which had been made in the army, rendered it probable that the expense thrown on India had by no means reached its maximum; he entertained little doubt, for example, that the system of short service and reserve would ultimately cause considerable expense towards India; and he thought it by no means impossible that unless the Indian revenues could meet the Home military charges, a time must come when India would ask *in formâ pauperis* to relieve her of a portion, at all events, of her military expenditure.

10. The question alluded to by the Financial Secretary to the Treasury in 1877, whether the short-service system is an expense to India, is a very important factor in the discussion of the Home charges. Quite recently we have been informed that it has never been definitely accepted that the short-service system has caused any increase in Indian military expenditure;

* Financial Despatch, No. 96, of 21st March 1879.

† Enclosure of Secretary of State's Financial Despatch, No. 282, dated 22nd August 1878.

but that, on the contrary, the War Office claim that, allowing for the large reduction in the non-effective charges, the result will be a considerable saving to India; and that there has never been any understanding that the revenues of India were to be charged with extra expense on the condition that a proportion of the army reserve would be available for India. It will have to be decided whether this important question is to be separately dealt with, but it is not proposed to do more than allude to the subject in this paper. It may be noticed, however, that in a memorandum by the Accountant-General of the War Office, dated 26th April 1889, it is said that the system of short service was introduced as "a measure most beneficial to Indian revenues." Whatever may be the opinions now expressed on this question, it must be remembered that in 1877, and also in a previous communication,* the Secretary of State for India (Lord Salisbury) referred to the great burden imposed upon Indian finances owing to the military charges having been enhanced by recent War Office regulations; he showed that the acceptance of the then weak state of the battalions by the Secretary of State for India was a concession to Imperial military requirements, entailing very great and, as far as India was concerned, needless expense on the finances of that country; and he pointed out the importance of the observance of the rule that only thoroughly drilled soldiers should be sent to India. In 1882–83, when the War Office failed to send out recruits to India, a bounty had to be given of Rs. 120 to soldiers between four and six years' service to extend their service to 10 years; and so the Government of India considered that the claim of India to have the depôt charges revised with reference to the number of soldiers actually supplied, should be admitted. It was, however, decided that the Indian revenues should bear this bounty charge.

11. It must be apparent to those who are called upon to review the long discussions, not yet terminated, on this difficult question, that the principles which should govern the settlement of matters under dispute have been lost sight of; the details, in fact, have overpowered the principles. It is desirable therefore to re-state these principles before passing to an examination of the particular charges. India is no longer administered by a Company which has its own interests specially to consider. It is held practically by Her Majesty's Government; and India is an integral part of the dominions of the Queen. As a part of the British Empire, England can no more surrender her responsibilities for India than she can surrender the responsibilities for any other part, whether home or foreign, of that Empire.

12. India opens a vast field for British enterprise, and enriches the mother country by her trade. India no longer pays tribute to England; but a large expenditure derived from the revenues of the former country is made in England, amounting to many millions per annum, for interest on public debt, and on guaranteed railway capital, and on account of stores, arms, materials for railways, troops, and public departments; on account of claims for the British Army in India, and for the despatch of troops, and for pensions to retired public servants and soldiers. The Indian customs duties on English goods have been gradually reduced until, as lately pointed out by Sir John Strachey, India is more a free trade country than any in the world. England, on the other hand, derives, it is said, a revenue of one million sterling from the duty on Indian tea. But, besides all this, a large amount of money is spent in England from the resources of persons paid from the revenues of India; and it is not too much to say that in thousands of families in England some member of the family is earning his living in India or drawing his income from this country. We are told that 30 years ago, 40 millions sterling represented the total foreign trade of India; for 1887–88 there were 90 millions of exports and 65 millions of imports, or 155 millions of total trade. In "The Trade of the British Empire," by Sir Rawson Rawson, it is stated that if the total trade of the Empire is 1,000 millions sterling, the contribution of the United Kingdom is 61 per cent., that of India 16 per cent., and all the colonies only 23 per cent.

13. To speak, however, only of the plain and obvious military advantages to England. The British Army is, it may be said, in a great measure trained in India, and many of its officers and men have served in this country, and have profited by the experience which it gives. India trains officers and men for the ordinary duties of soldiers, and specially in manœuvres, musketry, signalling, telegraphy, &c., and it is at the expense of India that England is enabled to pass trained soldiers to the army reserve. While the employment of a large portion of the British Army in India is of the greatest advantage to the British Army as a whole, it is a special attraction to the army, for Indian service is popular, and if a separate local army were maintained, the British Army would be shorn of much of its importance. But beyond all this, the army of India affords (as indeed it has been clearly stated in bygone years by the Government of India) a great reservoir of military strength to England. This reservoir has frequently been drawn upon; and it must be briefly indicated how differently the revenues of the two countries are treated, when Her Majesty's troops are lent for service to India, and when Indian troops are lent for external service on account of the Imperial Government.

14. When Her Majesty's troops are lent for service in India, whether for a long or short term, India pays every farthing of their cost from the day they embark to the day they return to England. England, as Lord Lawrence said, paid no portion of the heavy expenditure of the first Afghan War, nor of the Mutiny. All the troops and all the material which were sent from England to aid in putting down the Mutiny in 1857–58 were paid for out of Indian revenues. It was never urged at the time, that because this measure afforded a temporary relief to the British Exchequer, a portion of the ordinary cost of these troops should be paid by England. In the case of the Persian Expedition in 1856, India bore the whole of the ordinary and half of the extraordinary expenditure. In the first China War of 1839–40, India contributed the ordinary pay of the troops; and it was only in the second and third China Wars that the Imperial Government bore the whole of the charges. In the Abyssinian Expedition, the ordinary pay of the troops was a charge upon the Indian Exchequer; and although a large body of troops was withdrawn from India for a considerable time, no charge was made against the British Government on that account. It was on this occasion, during the discussion in the House of Commons, on November 26th, 1867, that the Marquess of Salisbury (then Viscount Cranborne) expressed the opinion which has been often quoted, that India should not be looked upon as an English barrack in the Oriental seas, from which any number of troops could be drawn by England without paying for them.

15. In the case of the Perak Expedition of 1875 in the Malay Peninsula, with which India was practically unconnected, the ordinary expenses of the troops lent by India were charged to its revenues. In the case of the despatch of troops to Malta in 1878, the whole cost of the troops was borne by the Imperial Government. In the last Afghan War a sum of five millions was contributed by England out of 15 millions, the direct expenditure. This grant was made as a matter of policy, because the war was not an exclusively Indian war, and as Mr. Gladstone stated in the House, the grant was to meet a moral obligation. In 1882 Her Majesty's Government proposed that all the expenses of the Indian Contingent for service in Egypt against Arabi Pasha should be borne by Indian revenues. A protest was made by the Government of India, and Her Majesty's Government then proposed that a grant of 500,000*l.* should be made towards the total cost of the Indian Contingent, which was reckoned at 1,142,000*l.*, and that sum was voted by Parliament. In 1885, India was again drawn upon for a contingent to send to Suakin on the Red Sea, for operations in the Eastern Soudan. The Government of India addressed the Secretary of State in their Despatch, No. 52, dated 17th February 1885, and claimed entire exemption from all share in the cost. Meanwhile, however, before the receipt of the despatch, an agreement was ratified by the House of Commons, under which Her Majesty's Government was to bear the extra cost, exclusive of the ordinary pay of the Indian troops sent out; the Indian Exchequer was to bear the ordinary expenses of the Indian troops and the ordinary charges of the vessels employed, and this was accepted.

16. When the troops were withdrawn from Suakin in May 1885, the Indian troops were left in garrison at that place. It was understood that this garrison was left in order to relieve Her Majesty's Government from the difficulty inseparable from leaving a British garrison in an unhealthy station in the hot weather, and the Government of India considered that it would be

* Letter, No. 161, W., of the 22nd March 1876, from India Office to War Office, *vide* Correspondence with the Secretary of State's Military Despatch, No. 185, dated 9th June 1881.

unjustifiable to charge the Indian revenues with the ordinary cost of the Indian troops employed. That opinion was not acquiesced in by Her Majesty's Government, who decided that the ordinary cost of the troops and vessels should be borne by India up to the date of their relief, which was to take place early in May, *i.e.*, India maintained a garrison at Suakin for Imperial purposes, the ordinary cost of the troops being borne by India, although the purposes of the garrison were distinctly of an Imperial nature. This brief account of the financial arrangements made when Indian troops have been employed by the Imperial Government shows clearly that, in nearly every instance, India has contributed both troops and money for the Imperial service; and on reviewing the circumstances, it will be admitted that the advantage has not been on the side of the Indian Exchequer.

17. Some statesmen who have discussed the question of the employment of Indian troops, have held the opinion that India should not be looked upon as a reserve from which military forces can be drawn for the use of the Imperial Government. That opinion is, however, not now generally accepted; and the views now held lean more to the side of the patent advantages which England possesses, in having so large a military force in India, which can, under ordinary circumstances, afford help to the British Army in operations beyond the actual confines of the Indian Empire. It is submitted that this is the true principle to accept. It is certainly supported by the facts quoted, of the use made of Indian troops by England; and however much in the past the opinion may have been justified that India should not be drawn upon for soldiers, it cannot be denied that India has supplied troops on various important occasions with great advantage to the Imperial Government. The reasonable view to be taken is that the army of India and the British Army elsewhere constitute one Imperial body for service for the defence of Her Majesty's Empire; that a portion of that army—the British and Native troops in India—is retained ordinarily for service in India, all the expenses in this country being borne by Indian revenues.

18. The constant changes in the organisation of the British Army, and various improvements, have undoubtedly caused a corresponding increase to military expenditure in India. The Government of India were not consulted in respect to a great many of these changes, some of which can hardly be considered to involve legitimate charges on Indian revenues; and this has been dwelt upon on more than one occasion in connexion with the charges which are made by the War Office against Indian revenues for the services of the British Army in India.* One conspicuous charge, the grant of deferred pay to soldiers, that is, presenting them with a certain sum of money on their discharge, has thrown a very large charge on Indian revenues without any corresponding benefit, while, as many are now of opinion, this grant of deferred pay is a very questionable boon to the soldier.

19. But at the same time it would be impossible not to admit that India must pay in fair proportion for the changes which are made with a view to the improvement of the British Army at large, provided those responsible for the application of the revenues of India are consulted beforehand. In effect India has paid and very considerably, even when the additional expenditure confers no benefit on India, but is rather incidental to changes made for the benefit of the organization of the Home force. The real point of difference is the definition of what this fair proportion should be. India practically pays for her own troops when they are employed by England out of India; she pays not only for the service in India of the British Army, but largely for changes which have been introduced without reference to India, and above all, she pays what will be found to be, on examination of the present papers, an excessive tribute on account of the expense to which, it is said, the War Office is put by the presence of a portion of the British Army in this country.

20. The true principles upon which the relations between England and India should rest are, that the Indian Army should be considered a branch of Her Majesty's Imperial Army; that when circumstances and the safety of India permit, aid should be freely given to the Imperial Government; but when the objects of the expedition or campaign are unconnected with India, the whole of the expenses of the troops drawn from India should be paid by the Imperial exchequer, just as the whole of the expenses of the troops drawn from England for an Indian expedition would be paid by Indian revenues. And, further, that beyond paying all charges absolutely dependent on the service of the British Army in this country, the Indian revenues should be strictly applied only to those items of expenditure which are necessarily a direct charge against the British troops serving in this country. India is incurring great expenditure in the increase of the army, and in armaments and defences for the maintenance of British supremacy in the East; it is surely not unreasonable to consider that England should bear a share of this burden. The principle should be that of true reciprocation, and India should not be charged on account of expenditure which must necessarily be incurred by England for the maintenance of her army and the empire at large.

Having thus stated the principles which should be maintained, we may now investigate the details of the charges which are made against the Indian revenues by the War Office on account of the British Army in India.

Examination of the War Office claims.

21. The claims of the War Office are for 1885–86, 831,571*l.*; for 1886–87, 712,047*l.*; and for 1887–88, 742,101*l.* The charges are given in considerable detail in the schedules attached to the Secretary of State's despatches transmitting those claims; they are grouped under 15 heads in the claims for the two former years, and may be dealt with in the order in which the charges are entered in the schedule. The first head is—

I.—*Capitation on Troops embarked for India.*

22. The principle adopted in calculating this charge is explained in Appendix I. of the War Office claims for 1885–86, the details being given under the separate heads A. to J. of those claims.

This charge represents the cost of training a recruit, and is levied on every soldier who embarks for India, whether with a regiment proceeding to India on relief, or with a draft to fill vacancies in batteries or corps already on the Indian establishment. The rate varies according to the arm of the service to which the recruit belongs, *i.e.*, from 20*l.* odd in the case of an infantry soldier to 125*l.* in the case of a corporal of Engineers, and is based on the period considered to be necessary for a recruit to be under training. This period is nine months in the case of mounted* men and six months for dismounted† men.

23. In the year 1885–86, the claim amounted to 426,637*l.*, and in 1886–87 to 283,173*l.*; the diminution in the charge being accounted for by the fact that in the former year 17,665 troops embarked for India, including the first instalment of the 10,000 men added to the British force in India; and in the latter year 11,579 men. In the year 1887–88, the claim is only 230,823*l.* This decrease is due to capitation not having been charged on soldiers who proceeded to India with detachments to fill vacancies in batteries of horse and field artillery and regiments of cavalry already on the Indian establishment; the charges on their account have been included in the depôt charges.

24. Assuming that India should pay for the training of men sent to India, one main point for consideration in connection with this charge, is what is the minimum period of training necessary for a recruit before he embarks for India. In reviewing the proposals of Mr. Bouverie's Committee, the Government of India, in their Despatch, No. 63, of 10th March 1876, apparently accepted six months as the period of training of an infantry recruit. The terms of enlistment were practically the same then as now, *vide* footnote. ‡ They, however, stipulated that if such a recruit is

---

* *See* Sub-Appendix.

* Horse, field artillery, and cavalry.
† Garrison artillery and infantry.

‡ *Terms of enlistment of Recruits in* 1874.

Cavalry and artillery	Twelve years' army service, or 8 years' army service and 4 years' reserve service.
Infantry	Twelve years' army service, or 6 years' army service and 6 years' reserve service.

Terms of Enlistment in 1888.

All men of artillery, cavalry, and infantry are enlisted for short service, *i.e.*, 7 years' army and 5 years' reserve service. If, however, the army service expires whilst serving abroad, the army service is extended to 8 years.

sent to India with less than six months' training, a proportionate reduction should be made in the capitation charge.

In the India Office letter, dated 23rd February 1881, one of the enclosures of the Secretary of State's Military Despatch, No. 185, of 9th June 1881, it is stated that no man should be embarked for India "who has "not the physical standard proper for a man of 20 "years of age, and that six months be rigidly fixed as "the minimum period of training for the recruit "before embarkation." It is presumed that these conditions were intended to apply to men of all arms of the service.

25. No definite information in regard to the period of training that a recruit has to undergo at home before he is received into the ranks can be obtained, but from the regulations quoted below,* it would appear that the maximum period an infantry recruit is required to remain at the depôt is three months, and the minimum period two-and-a-half months. After this he is transferred to a battalion, and from paragraph 222, S. of Section VII. of the Queen's Regulations, it would appear that, after a month's course with the battalion, he is to be subjected to an examination. Apparently, therefore, an infantry recruit has completed his training in four months.

As regards the cavalry recruit, paragraph 44, Section XVIII., Queen's Regulations, lays down that his training at the depôt troop must be such as to render him "as efficient as possible and ready to join the "ranks" when he arrives at the service troops. But how long he is required to be under training in the depôt troop is not stated.

The period of training of a Royal Artillery recruit is not known. But in Royal Artillery Regimental Order, No. 38, of 1884, by His Royal Highness the Field Marshal Commanding-in-Chief, it is laid down that a field artillery recruit is on the completion of 130 days' drill to be returned for duty; it is therefore presumed that his period of training is not more than five months. In the case of the horse artillery recruit the period may perhaps be six months.

26. There is no doubt that many recruits have not undergone the prescribed periods of training in England before embarkation for India, nevertheless the capitation claim is based on the assumption that they have. It is known on the very best authority, the War Office itself, that in the case of the men of the Royal Horse Artillery, who have lately come out to India, this has not been the case. In the correspondence, No. 2, accompanying the Secretary of State's Military Despatch, No. 58, of the 14th March 1889, dealing with the question of the extension of the grant of bounty to men of the Royal Artillery in India, the following passage occurs:—

> "Adverting to your letter of 21st January 1889, I have further to inform you that all men of the Royal Horse Artillery going out as drafts to India this season will have nine months' service by the time they arrive in India, and that the average service is higher than has been the case in previous years."

India pays all charges from date of embarkation, so that when these men had completed nine months' service, India had paid them for ten months, *i.e.*, for nine months included in the capitation rates, *plus* one month during the voyage to India. If this was the case with the horse artillerymen, who probably require as much, if not more training than the cavalry recruits, it would appear more than probable that the cavalry, garrison artillery, and infantry recruits who have come out to India of late years had less than the prescribed periods of training when they were embarked for India. It does not appear equitable that India should be charged for a longer period of training than the men really undergo. If during the last year and previous years it was found practicable to send men to India with less service than is charged to India, there would appear to be no reason why a large reduction should not be made in the supposed training periods of recruits in England; and the relief to the Indian revenues would be great. The drafts that join corps out here may be supposed to be trained soldiers, but as a matter of fact they are all put through a course of drill on joining their corps in India. It is difficult to say what reduction should be made; probably it should be not less than 100,000*l.*

* *Infantry Recruits.*

Paragraphs 222 A., 222 C., Section VII., and paragraphs 8 K and 29 of Section XVIII. of the Queen's Regulations.

It is, however, to be noted that in the War Office claims for 1887-88 some modification has been made. India has been allowed a rebate for men embarked with service short of the fixed training period, and also for men embarked with more than one years' service, and in the case of the mounted men six months has been taken as the minimum period. The same principle should be adopted as regards the claims for the two previous years.

27. The changes advocated in the principles to be adopted in calculating the capitation rate on troops embarked for India are—

(*a.*) That six months should be fixed as the minimum period of training soldiers for both the mounted and dismounted branches of the army.

(*b.*) That in the case of men embarking for India with less than six months' training, India should only be charged for the actual period of training.

(*c.*) That the accounts for the three years under review should be revised accordingly.

(*d.*) That the services of these men on the British establishment before embarking for India be allowed for.

II.—*Charges for Depôts for training Recruits.*

28. The principle adopted by the War Office in calculating this charge in their claim for 1885-86 and 1886-87 is explained in Appendix II. of the claim for the former year.

The following statement shows how the rates proposed by Mr. Bouverie's Committee compared with those now adopted by the War Office:—

	Rates proposed by Mr. Bouverie's Committee.	Rates now adopted by War Office.
Royal Horse Artillery.	Total cost of two depôt batteries *plus* two-twelfths of the cost of the depôt brigade staff.	Total cost of two depôt batteries.
Riding establishment, Royal Artillery.	Half the total cost of the riding establishment.	Five-twelfths of the total cost of the riding establishment.
Field artillery -	Cost of three depôt batteries *plus* three-twelfths of the cost of the depôt brigade staff.	Cost of four depôt batteries, there being four brigades of Royal Artillery in India.
Garrison artillery	Two-fifths of the cost of seven garrison artillery depôts, including seven-twelfths of the depôt brigade staff.	One sixth of the cost of eleven garrison artillery depôts *plus* the cost of the militia permanent staff stationed at those depôts.
Cavalry - -	The actual expenses of the depôts of Indian regiments and depôt staff, the expenses of repairs and buildings, and one-fourth of the cost of cavalry riding establishment.	The total cost of the depôt.
Infantry - -	5*l.* per diem for each of the brigade depôts having an Indian depôt attached. Should any battalion be added to the 50 now on the Indian establishment an additional payment of 5*l.* to be made from date of such battalion embarking for India; or should a battalion be reduced on the Indian establishment, 5*l.* a day less will be paid by Indian revenues from the date of embarkation in India of the battalion so reduced, or brought home without relief.	One-fifth of the cost of 53 depôts.

The views of the Government of India on the report of Mr. Bouverie's Committee are contained in their Military Despatch, No. 63, of the 10th March 1876.

29. The principle adopted in calculating the claims for 1887-88 is the same as in previous years, excepting that India has been charged with the whole cost of the cavalry depôt and the depôts of the horse and field artillery, instead of, as heretofore, only the cost of the staff employed at the above depôts, with a capitation rate for each recruit sent out to India. At the same time an allowance has been made for every man transferred from these depôts to serve with regiments or batteries on the Imperial establishment.

The reason given for this change is, that "both the "cavalry depôt and the horse and field artillery depôts "have been organised and exist solely to meet Indian

"requirements, and that, as the establishments maintained are only just sufficient to supply the annual drafts required for India, it is impossible to absorb in the home regiments and batteries those who are left behind at the end of the trooping season, by reason of their not complying with the stringent conditions imposed by the Indian Government in respect of age and service."

It is urged by the War Office that these depôts are maintained in England merely to supply recruits for batteries and corps in India. But it is to be noted that until recently England was unable to furnish the number of men that India required, and in consequence, a bounty had to be offered to induce men to remain serving in India for an additional two years. In connection with this point, the Government of India, in their Military Despatch, No. 15, of 5th February 1884, addressed the Secretary of State as follows:—

"Paragraph 3.—We would also invite your Lordship's attention to the claim of India to have the depôt charges revised with reference to the numbers of soldiers actually supplied. India pays 64,000*l.* a year for the cavalry depôt, and 5*l.* a day for each infantry brigade depôt; but as this arrangement was entered into on the assumption that these depôts were maintained to supply the recruits ordinarily required, the revenues of this country may, with justice, claim a reduction in the above charges if the recruits are not supplied, or are not needed, in consequence of the grant of a bounty (paid by India) to induce men to extend their term of service in India."

The Secretary of State in reply* to this despatch forwarded a note by Sir T. L. Seccombe, in which it was stated that "the very heavy charges for the "cavalry depôt and those on account of the infantry "brigade depôts are constantly kept in view in the "discussion in Lord Northbrook's Commission."

30. The total annual charge against India for the depôts is as follows:—

	£
1885-86	211,012
1886-87	215,501
1887-88	359,597

The total number of officers and men serving with the depôts, for whom India is required to pay, is given below. From this it will be seen that these depôts form a very substantial addition to the military forces of Great Britain. There are the whole of the officers and men, and it must be also borne in mind that nearly 1,000 horses are kept up at the expense of India; they would certainly be drawn upon for active service should occasion arise.

——	1885-86.	1886-87.	1887-88.
Cavalry depôt	256	283	1,394
Royal Horse Artillery depôt	141	141	451
Field Artillery depôt	432	432	1,629
Garrison Artillery depôt	145	153	153
Infantry depôt	1,251	1,251	1,251
Riding Establishment, Artillery	57	57	57
Total	2,282	2,317	4,935

31. The total annual charges on account of the depôts for each arm of the service, taking them in order, are as follows:—

Royal Horse Artillery.

	£
1885-86	19,788
1886-87	19,310
1887-88	35,544

For the first two years India has been charged the cost of the permanent staff of the depôt batteries maintained on the Home establishments, *plus* a fixed sum for each man embarked for India; this latter charge is shown under Head I.—Capitation for Troops embarked for India.

The number of men embarked for India in those years is shown below:—

1885-86	223
1886-87	138

* Military Despatch, No. 93, dated 3rd April 1884.

The depôt charges per head, therefore, average about—

	£
1885-86	89
1886-87	140

To these amounts should be added the capitation rate for horse artillery embarked for India in those years, and it will be found that each horse artillery recruit cost in training:—

	£
1885-86	128
1886-87	179

It is open to question whether this amount is not excessive. The horse artillery recruits, for instance, are certainly not all that time at the depôts, and both Royal Horse Artillery and Royal Artillery recruits are enlisted during the year. A large number of the so-called trained men for the mounted artilleries have never crossed a horse before being landed in this country. If we go into details, we may take as an example *practice ammunition* for recruits. As regards the Horse Artillery depôt, this is believed to be an incorrect charge, as in some years no ammunition is either fired or even *drawn*. It does not form part of the equipment allowed to a depôt, and there would be neither time to teach the use of it, nor a range on which to fire it. It should be ascertained whether this also applies to all the field and garrison artillery depôts.

Of the drafts which landed in India for the artillery in a recent year, only 252 out of 753 had fired their ammunition; and they were older soldiers belonging to *service* batteries who had volunteered for India. It was pointed out to the Secretary of State that the artillery recruits were not trained. [Paragraph 9, General Letter to Secretary of State, dated 15th June 1889.]

In charging for barrack accommodation for each recruit at 7*l.* 14*s.* a year, it is assumed that the capital expenditure per head per recruit is "110*l.* *or more if* "*the depôts be taken into consideration;*" regarding this, as also the charges for barrack accommodation for officers, it seems that the original charge was "110*l.* or more" for the number of men serving in the army at the time the barracks were built, and it is scarcely correct to assume this sum as the capital charge for all the men who have passed through the army.

To go further into details of the cost of the Royal Horse Artillery depôt. The share (15*s.*) of paymaster's pay is too high; he pays a large number of batteries besides the two Royal Horse Artillery depôts; and his whole pay is either 1*l.* or 1*l.* 5*s.* a day. The whole pay of a veterinary surgeon is charged against the Royal Horse Artillery depôt. He has at least six or eight batteries in his charge, and the rest are service batteries.

On the other hand, although India is nominally charged the whole expenses of the depôt, Royal Horse Artillery, only 23 sergeants and 102 rank and file are charged for; whereas the strength is 22 sergeants and 380 rank and file; so it is possible that some of the men are regarded as properly chargeable to England. Many of the men never come to India at all, but are drafted to batteries at Home; but if this is so, why is the whole pay of the 16 officers charged? The footnote says the total cost of the Royal Horse Artillery depôt is chargeable to India. 1,000*l.* is charged for 25 horses for Royal Horse Artillery depôt, at 40*l.* a horse; both in horse artillery and field depôts none but old horses drafted out of other batteries as unfit are allowed. It is believed that a large number of these are over 16 years of age, and those that are younger are unsound horses from service batteries.

These depôts are organised on too large a scale for the duties they have to perform. In 1886-87, the two horse artillery depôt batteries cost 19,311*l.* 14*s.* 11*d.*, the whole of which is charged to India; and so far as can be seen, all they had to do in return was to send 138 recruits to India.

For the year 1887-88, India has been charged with the whole cost of the Royal Horse Artillery depôt, on the ground that it has been organised and exists solely to meet Indian requirements. The details of this charge are given in Appendix D. of the War Office claims for that year. As regards the first two items* in that

	£
* Charge for regimental pay and other miscellaneous items in the pay lists of depôt, Royal Horse Artillery	12,318
Pay of officers (departmental and regimental)	4,580

Appendix, there is nothing to indicate whether or not they represent actual charges. In addition to these, India is charged with certain estimated charges based on an average of 435 men on pay during the whole year. These men are, it is understood, supposed to represent those recruits who were left behind at the end of the trooping season, "by reason of their not "complying with the stringent conditions imposed by "the Indian Government in respect of age and service, "and whom it was impossible to absorb in the Home "* * batteries."

From Appendix A. of the War Office claim for 1887–88, it appears that 313 horse artillery recruits were sent out to India as drafts during that year, and that the strength at the depôt on the 31st March 1888 was 231 as shown in Appendix T.; the average of 435 men throughout the year on which the estimated charges are based, therefore, seems high. It is not possible to criticise the various estimated charges, but it is not understood why a charge has been made for deferred pay. Such an item was not included formerly in the "capitation" on troops embarked for India, and it is not apparent why such a charge has now been made. The charges under the heads given below appear excessive, and should be reduced, if not altogether omitted, for the reasons mentioned above.

	£
Purchase of horses	960
Ammunition	331
Barrack accommodation	2,670

Considering, therefore, that only 313 recruits as drafts were sent out to India during 1887–88, their training cost the Indian Government about 113*l.* per man. This amount is slightly reduced by the credit of 80*l.* allowed by the War Office on account of men transferred from this depôt to the Home batteries, and compares favourably with the cost per recruit in the claims of the two previous years.

Field Artillery.

32. The annual charges for the field artillery depôts are as follows:—

	£
1885–86	44,321
1886–87	43,498
1887–88	105,773

For the first two years India has been charged the cost of the permanent staff at the four depôt batteries maintained on the Home establishment, *plus* a fixed sum for each man embarked for India with detachments; this latter charge is shown under Head I.—"Capitation."

The number of men embarked for India with detachments in those years is shown below:—

1885–86	786
1886–87	619

The depôt charges per head are therefore about—

	£
1885–86	56
1886–87	70

To these amounts should be added the capitation rate for field artillery embarked for India in each year, the result being that each field artillery recruit costs in training as follows:—

	£
1885–86	93
1886–87	106

As in the case of the horse artillery depôts, the field artillery depôts are organised on a scale which is scarcely warranted. Each battery, in addition to its own officers, viz., major, captain, and three subalterns, has a staff consisting of a lieutenant-colonel, an adjutant, a riding master, and a quartermaster. The four depôts for which India pays are stationed at separate places. If collected together, one set of staff officers would be sufficient, and the cost of three sets would be saved.

For the year 1887–88, India has been charged with the whole cost of the field artillery depôts for similar reasons to those given in paragraph 29. The details of this charge are in Appendix E. of the War Office claims for that year, and on the grounds stated in paragraph 31, exception may be taken to the following items:—

	£
Deferred pay	4,791
Purchase of horses	1,760
Ammunition	920
Barrack accommodation	9,774

Considering that only 887 field artillery recruits were sent out to India as drafts during 1887–88, their training cost India about 119*l.* each, or deducting the 3,220*l.* credited by the War Office on account of men transferred from these depôts to the Home batteries, 116*l.* each. This amount is high compared with the average cost per man of the two preceding years.

Garrison Artillery.

33. The annual charges on account of the garrison artillery depôts are as follows:—

	£
1885–86	12,840
1886–87	13,727
1887–88	14,012

The number of men sent out with detachments in each of these years is given below:—

1885–86	422
1886–87	346
1887–88	567

The average cost of the annual depôt charges per man being about—

	£
1885–86	30
1886–87	39
1887–88	24

These figures do not, however, represent the total cost of training, and to ascertain this, they should be increased by the capitation rates for garrison artillery embarked for India during each of those years. This addition gives the average annual cost per man at about—

	£
1885–86	55
1886–87	64
1887–88	49

Each of the 11 garrison depôt batteries, the cost of which India has to share, has a staff attached consisting of one lieutenant-colonel, one adjutant, and a staff paymaster. The cost is higher than necessary, and these 11 batteries, which are all at different stations, might well be collected in three batteries, and the cost of eight sets of staff officers saved.

Moreover, it is to be observed that the depôt charges are calculated with reference to certain fixed establishments, but it is not unreasonable to suppose that there were fluctuations among them during the year, and yet India derives no benefit by such fluctuations, which it appears only right that she should do. This remark applies to all the depôt charges.

It will be seen from the above remarks that the cost of each recruit of each branch of the Royal Artillery is very high.

Doubtless, in the case of the Royal Artillery, the new arrangements introduced from the 1st July 1889, by which the depôts would be small and concentrated at Woolwich, may have an effect in reducing these charges; but the necessity for the reduction should be strongly impressed on Her Majesty's Government.

Riding Establishment, Royal Artillery.

34. The annual charges for the riding establishment Royal Artillery, are as follows:—

	£
1885–86	5,164
1886–87	5,039
1887–88	5,062

India is required to pay a proportion of the cost of this establishment, with reference to the number of officers of Royal Artillery and Royal Engineers employed on the British and Indian establishments, respectively. It is maintained to provide instruction to a few rough-riders and to the cadets. Many of the cadets come out quite unable to ride, young officers can be taught in India, and they all have to go to a riding school *de novo* when they join. Some reduction of this charge may reasonably be asked for.

Cavalry.

35. The annual charge on account of the cavalry depôt is—

	£
1885–86	29,123
1886–87	30,444
1887–88	93,310

For the first two years the charge against India is on the same principle as that adopted in the case of horse and field batteries in those years. The number of men embarked for India, with detachments, in these two years is given.:—

1885–86	1,038
1886–87	1,067

The depôt charges per head were in—

	£
1885–86	28
1865–87	28

To these amounts should be added the capitation rate for cavalry embarked for India in those years. The result is that each recruit costs in training—

	£
1885–86	65
1886–87	65

For the year 1887–88 India has been charged with the whole cost of the cavalry depôt, or the ground that it has been organised and exists solely to meet Indian requirements. From Appendix C. of the War Office claims for that year, it appears that the actual charge included in the pay lists of the cavalry depôt for 1887–88 has been debited to India. India has also been charged with the pay of officers, departmental and staff, but there is nothing to show whether this is actual expenditure, and it is impossible to ascertain how many men were actually at the depôt. In the War Office papers relating to the claim for 1887–88 it is said the strength of the depôt was 1,368; but apparently only 410 drafts were sent out. It is true that a cavalry regiment (583) was sent to India, but a capitation rate was charged for each of these men, and this capitation rate includes similar charges to those for the men at the depôts: The "estimated charges," on which the total is partially based, include the following items, to which exception has already been taken in paragraphs 31 and 32:—

	£
Deferred pay	4,100
Purchase of horses	1,120
Ammunition	1,026
Barrack accommodation	8,346

Considering, therefore, that only 410 recruits embarked for India as drafts during 1887–88, their training cost India about 227*l.* per man, or deducting the rebate of 5,200*l.* on account of men transferred from this depôt to home regiments, 215*l.* per man. Compared with the charge per man for the two preceding years, this rate is extraordinarily high.

As a cavalry recruit costs so much, it might be expected that, when he arrives in India, he would be perfectly trained. But it was only very recently that a report was made to the Government of India by the Commander-in-Chief that the officers who inspected the 8th Hussars and 17th Lancers had expressed their opinion that most of the recruits were unfit to join the ranks, and it was proposed that additional instructors should be provided at the charge of Indian revenues.

Infantry.

36. The annual charge for infantry depôts is as follows:—

	£
1885–86	99,774
1886–87	103,480
1887–88	105,896

The number of men sent out to India with detachments, in each of these years, is shown below:—

1885–86	10,404
1886–87	5,373
1887–88	5,114

The average cost of the annual depôt charges per man, is, therefore, about—

	£
1885–86	9
1886–87	16
1887–88	20

To ascertain the total cost of training, it is necessary to add to these amounts the capitation rates for infantry embarked for India. With this addition the result will be—

	£
1885–86	30
1886–87	36
1887–88	41

It appears from the accounts of the three years under review, that during each year the War Office charged the following amounts per man embarked, for enlisting, training, feeding, clothing, and moving them to the port of embarkation, viz.:—

		1885–86.	1886–87.	1887–88.
		£	£	£
For nine months	Horse Artillery	128	179	113
	Field „	93	106	116
	Cavalry	65	65	215
For six months	Garrison Artillery	55	64	49
	Infantry	30	36	41

In addition to the above the following charges were made by the War Office in each year under the head "Charge for men who deserted, died, or were discharged with less than one year's service" (*see* IV.):—

	£
1885–86	18,016
1886–87	18,275
1887–88	8,766

37. The conclusions which may be reasonably drawn are—

The depôt charges should be reduced on the grounds that the officers and men form part of the military strength of England, that depôts need not be specially kept up for India on so large a scale, and that many of the charges are excessive. It would be cheaper to have separate Indian depôts, like that at Warley (which supplied recruits at 20*l.* per man), and give the further training to the men out here. The expense would not be nearly as much as the present plan, which seems to lighten the English estimates by making India pay for training men in cavalry, artillery, and infantry depôts, organised on a far larger scale than she requires.

A protest should, it is submitted, be made against these depôt charges, and the expensive scale on which they are maintained. The depôt charges should be reduced by not less than 100,000*l.*

III.—*The Agency Charges.*

38. These are the allowances paid to regimental agents for regiments of cavalry and battalions of infantry on the Indian establishment. The charge is between 4,000*l.* and 5,000*l.* for 1885–86 and 1886–87 and 3,763*l.* for 1887–88, and India should certainly not be called upon to pay them; the Government of India may well object to Indian revenues being charged therewith.

IV.—*Charges for Men who deserted, died, or were discharged with less than one Year's Service.*

39. It is difficult to understand on what principle these charges, which amount to about 18,000*l.* a year, are paid for by India. A certain loss is sustained by deaths, desertion, and invaliding of men of less than one year's service, say about 2,800. It is assumed by the War Office that one-third of the men are raised for regiments in India; and a calculation is made by which India is charged for these losses. India has no means of knowing whether these losses might not have been prevented; in the old days of the Warley Depôt, it is believed, desertion was never heard of, and it appears somewhat extraordinary to charge India the cost of raising the men, as well as the capitation rate on every man, and, in addition, the cost of men she never receives. The charge under this head in the claims for 1887–88, is 8,766*l.*, which is considerably less than the charge of the two previous years. The reduction is, however, only apparent, as the similar charges for cavalry and horse and field artillery are included under Head II., Depôts, &c. It is submitted that the Government of India may ask that India should be relieved of these charges altogether.

V.—*Maintenance of young Officers on first Appointment to Regiments serving in India, previous to Embarkation.*

40. The principle upon which the charges are calculated, amounting to over 10,000*l.* in one year, over 7,000*l.* in the second year, and over 8,000*l.* in the third year, is given in Appendix V. of the War Office claims for 1885–86 and 1886–87, and in Appendix K. of the claims for 1887–88. The War Office take the number of commissions granted to officers of the different arms of the service in the year, and the number appointed to regiments and batteries in India. They assume that about half the number of officers of artillery and of cavalry were maintained for two months in England, and half for five months, and the cost of their pay is calculated accordingly. In regard to the infantry commissions, of which there were 393 in 1886–87, 98 were to fill vacancies in the Staff Corps, leaving 295 to fill vacancies in the Indian and British Army. They then enter the number of infantry officers employed on the two establishments, and assume that out of 295, the proportion for India is 102, which, together with 98 for the Staff Corps, gives a total of 200; and they take the pay of 100 officers for two months and 100 officers for five months, adding agency and barrack accommodation. Now, this mode of calculation is not based on actuals and is scarcely fair to India. During the time that these officers are in England they form part of the British Army, and, in some cases, whilst so retained, their services are made available for duty which would otherwise have to be performed by officers who would have to be paid for absolutely by Her Majesty's Government. The War Office has the use of the officers who join the Staff Corps from England, for the first year or two of their service, and they pay no portion of the pension of these officers which is accruing during that period; the War Office thus saves on the establishment of lieutenants, and also a portion of the liability for pension. As India also pays a large contribution for the training and education of the officers required for India, Indian revenues should be relieved of a portion of this charge for young officers.

VI.—*Cost of young Officers of Royal Engineers while under Instruction.*

41. The manner in which the War Office calculates this charge, which for 1886–87 amounts to 12,273, is given in Appendix VI. The War Office takes the average duration of the stay of these young officers prior to embarkation from the date of their first commission, and they charge India all their engineer pay, servants' allowances, barrack accommodation, mess allowance, and agency allowance at 1 per cent. of pay and servants' allowance. Their instruction is paid for by India, and India is also charged for their previous education. If it be urged that the officers are extra to the British establishment, it may, on the other hand, be pointed out that during the stay of those young officers in England they form an integral part of the strength of the Royal Engineers in England, and would be available by the Imperial Government, if required, for any service, while some of the charges will be incurred in any case, whether the officers are destined for Indian or Imperial service. India might equitably ask to be relieved of a portion of these charges, say half the sum claimed for each year.

VII.—*Difference between the Pay of two Colonels and one Lieut.-Colonel on the Indian Establishment of Royal Engineers, but employed at Home, and the Pay of three Lieutenants employed instead by India.*

42. This is a small charge, amounting only to 971*l.* odd, but it is a charge which India should not be called upon to pay. If these colonels and lieutenant-colonels are employed at Home, there is no apparent reason why India should have to pay for them, considering that the War Office has lately laid great stress on their want of lieutenant-colonels and other officers of a superior rank. It is to be observed that in the claims for 1887–88 no charge has appeared under this head.

VIII.—*Cost of training Veterinary Surgeons for India.*

43. The War Office estimates that each of the four supplied annually to India costs 150*l.* It is not understood how this charge is arrived at, but considering that the officers are employed in England during that time, that they render service to the horses on the British establishment, and that India makes no countercharge for their training in India, India might be relieved of this charge.

IX.—*Cost of Examination of Candidates for the Indian Medical Service.*

44. Here, again, we have no details as to how the charge of over 400*l.* in each year is arrived at, but it seems a large charge in view of the fact that the average number of surgeons on probation at Netley has been 30 during the last 15 years; and considering the very moderate fees which are allowed for examinations, it is thought that the charge should be reduced by 200*l.* in each year.

X.—*Educational Establishments.*

45. The total annual charges against India on account of educational establishments in England, taking them in order, are as follows:—

Royal Military College, Sandhurst.

	£
1885–86	16,927
1886–87	16,927
1887–88	16,451

The principle on which the charge is made is given at page 29 in Appendix VII. of the War Office claims for 1885–86. The total cost of the establishment is entered, and from that is deducted the contributions from cadets; the net result is 24,725*l.* Upon that they add interest on the total cost of land and buildings at 3½ per cent., *viz.*, 9,130*l.*; total, 33,855*l.* The War Office then takes the number of officers of cavalry and infantry on the Home and Indian establishments during 1886–87, which they say was as follows:—

British	3,606
Indian, including Staff Corps	3,668

They consequently charge India one-half, because there are it is stated the same numbers of officers of cavalry and infanty on the British and Indian establishments. To take first the items making up the total expenditure on account of Sandhurst, it may be objected that no charge should be made against India on account of the buildings erected in 1804, and the purchase of the estate, and for all the other buildings which have been added since. The charge is in any case hardly a fair one, and it must be remembered that up to 1861–62 India maintained the Military College at Addiscombe at her own expense for the training of officers for the Indian Army. Passing this by, and coming to the principle on which the charges are made, it is submitted that it is not in accordance with the actual expenditure on behalf of India to charge India in the proportion of one-half of the total expense. The officers of cavalry and infantry on the Indian establishment, including the Staff Corps, include, it must be supposed, a good many officers who never passed through Sandhurst at all; it is scarcely just that India should have to pay for the education of officers of the British Army, merely because their regiments are in India, and there would seem to be no reason why India should be charged on this empirical basis. If a charge is to be made, it should be made according to the number of officers who are appointed in each year to the Staff Corps and who have passed through Sandhurst, rejecting, of course, any charge for interest on the cost of lands and buildings, and allowing for the fact that many of the expenses would be incurred whether the Indian Army were supplied or not.' A reduction of at least 5,000*l.* should be made in the annual charge under this head.

Royal Military Academy.

	£
Net cost	17,130
Interest on land and buildings	7,142
Total	24,272

46. The same considerations as were stated in connexion with Sandhurst apply to Woolwich. The War Office takes the number of officers of artillery and engineers on the British and Indian establishments,

and charges India $\frac{5}{12}$ths of 24,272*l.*, or 10,113*l.*, accordingly, *i.e.*, in the proportion of 986 officers on the Indian against 1,320 on the British establishment. Some of the officers on the Indian establishment have not passed through the Royal Military Academy, but were educated at the expense of India, at Addiscombe, or passed direct. The charge for the Academy should be simply a charge according to the number of young artillery and engineer officers supplied to India annually, and with advertence to the fact that much of the expenditure would have to be incurred if India had its own college. In respect to engineers who subsequently adopt continuous service and intend to serve in India during the whole of their lives, the charge for their education might appear to be a fair one against Indian revenues; but it is submitted that with reference to the artillery the charge should be reduced, on the ground that India makes no charge for the officers when they pass back to the home service, although they may receive considerable further military education in India, not only at garrison classes, but in various other ways. India should not be charged interest on the original cost of a part of Woolwich Common in 1804, and on the various buildings and extensions since added. It is submitted that this charge should be reduced by about 3,000*l.*

Staff College.

	£
1885–86	2,822
1886–87	2,822
1887–88	2,166

47. The charges against the Indian Government for the maintenance of the Staff College appear to be excessive. India is charged, not in proportion to the number of officers of the Indian Army present at the Staff College, but in proportion to the number of officers of the British and Indian "establishments" who have passed through the Staff College and hold staff appointments. In 1886–87 the number of Staff College officers holding staff appointments on the two establishments was—

British (Home Army)	92
Indian (British and Staff Corps)	32

India was therefore charged one-fourth of the annual expenditure of 11,290*l.* 17*s.* 5*d.*, or 2,822*l.*

Only 16 Indian officers hold the Staff College certificate, and there is no reason why India should have to pay for British officers merely because they happen to have passed the Staff College years ago. There are 32 officers annually admitted to the Staff College, of whom three are of the Indian Service. As officers remain at the Staff College two years, there are 64 officers of whom six are Indian service or Staff Corps men. The charge against the Indian Government for 1885–86 and 1886–87 would, therefore, appear to be $\frac{6}{64}$ of 11,290*l.* 17*s.* 5*d.*, or 1,058*l.*, being 1,764*l.* less than the amount charged.

The training of officers is not completed at Woolwich and Sandhurst, and logically India ought to charge the War Office for our Military Education (Garrison Instruction, &c.) Department in India. On the whole, India may claim some reduction of these charges on this ground alone, say 1,764*l.* for each year.

Army Medical School, Netley.

48. The total cost in 1886–87 was 8,348*l.*, and the charge for that year against India was 3,710*l.*, being calculated apparently on the number of medical officers on the British and Indian establishments. Reading this appendix with paragraphs 31 to 36 of the report of the Special India Office Committee on home charges, dated 5th April 1889, received with Financial Despatch, No. 144, dated India Office, 4th July 1889, it is difficult to follow the method which is pursued in making the calculations. The Government of India have, however, objected to paying from Indian revenues on account of Netley, and the India Office Committee consider that as no surgeons have been appointed to the Army Medical Department since July 1887, and that as only four candidates were selected at the examination in August 1888, all of whom were for the Indian Service, it is necessary to guard against an undue proportion of the cost being charged against Indian revenues; and in the opinion of the committee this affords an additional reason for withdrawing altogether from the institution.

Objection may be taken to payment being made for the training of officers of the medical staff at Netley. It is true some of these may subsequently serve in India, but on the other hand, India only has their services for a short time. The question of the payment on account of the Indian Medical Service might be allowed for the present to merge in the general question of the disconnection of the Indian Service with that institution.

School of Gunnery, Shoeburyness.

49. The total charge for 1885–86 and 1886–87 was for each year, 14,950*l.*, and the War Office calculated that as there were 21,000 artillery on the British establishment and 11,000 on the Indian establishment, India should be charged with one-third of the cost, amounting to 4,983*l.* In the claims for 1887–88 this charge amounts to 5,063*l.* This appears to be an excessive charge, considering that the total charge includes the experimental branch as well as the instructional. England would be obliged in any case to keep up an establishment to carry out experiments, and she did so long before India was connected directly with the Home army. Nor should the numbers of artillery on the two establishments form the bases of calculation. The numbers employed in the two countries do not give a measure of the advantages gained by each from these establishments. If any charge is made it should be simply on the numbers of officers sent home from India to undergo a course of instruction at Shoeburyness. The charge should be reduced by at least 2,500*l.* in each year. The officers form part of the garrison of the United Kingdom while they are under instruction; they form part of the Royal Regiment of Artillery employed on service all over the world, and do not necessarily serve out their time in India.

School of Military Engineering.

50. The charges on this account are given in considerable detail in the Appendix, pages 33 and 34 of the War Office claims for 1885–86. In 1887–88 these charges have been increased to 23,878*l.* The charge made, viz., $\frac{2}{7}$ths of the total cost, or 2,357*l.* in 1885–86 and 1886–87, and 2,664*l.* in 1887–88, is somewhat difficult to understand, but it is scarcely fair to charge India so much for the instruction of the young officers of Royal Engineers, when these professors and instructors have to be kept up in any case, and the charge for recruits and trained men of Royal Engineers should not be made in addition to the charge for capitation, which has been shown to be very considerable, amounting in 1885–86 to 1,245*l.* for one corporal, two second corporals, and 10 lance-corporals of Royal Engineers. A reduction of 500*l.* should be made in this charge.

School of Musketry.

51. The total cost is 8,345*l.* in 1885–86, including every kind of charge, and the War Office takes the total number of all ranks on the British and Indian establishments, and charges India accordingly, *i.e.*, $\frac{3}{10}$ths, or 2,503*l.* This, as has been remarked before, is not a satisfactory method of calculation, because it cannot be supposed that the officers and men on the Indian establishment of the British Army have all enjoyed the training of the School of Musketry. India has to keep up schools of musketry of its own, and to train in shooting that portion of the British Army which is in India.

We do not charge the War Office for our schools of musketry in India where officers of the British Army receive instruction, and India may ask to be relieved of the charge for Hythe.

Artillery College, 1887–1888.

52. A charge of 2,760*l.* on the above account first appears in the claims for 1887–88. It is explained in Appendix L. that India has been charged with one-third of the total cost of the staff, &c. of the college, with reference to the numbers under instruction in the British and Indian establishments respectively. This charge is only justifiable if the officers of the Indian establishment return to India for their future career.

XI.—*Advance of 25 Days to Men embarked as Drafts to India.*

53. These are actual charges, and must be accepted.

XII.—*Expenses of Men awaiting Discharge, including travelling Expenses of Invalids.*

54. The charge under this head amounted in 1885–86 to 21,000*l.*, slightly less in 1886–87, and to about the same in 1887–88. In 1886–87 887 men arrived from India with regiments to join the army reserve or for discharge, and 3,145 with detachments, while 1,302 were invalided. India is charged for 60 days for men with regiments, and for 36 and 78 days respectively for men with detachments or invalids, these two latter periods including 28 days on board ship. The charges themselves include pay, rations, barrack accommodation, travelling expenses, and compensation in lieu of clothing. It is difficult to follow the calculations, but the number of days for which India is charged is excessive. There is no reason why India should pay the War Office for 32 days of a man's service in England before his transfer to the army reserve, assuming that he has spent 28 days on the voyage from India, or why India should pay for 50 days for invalids. The transfer of the men to the army reserve should be quickly accomplished, and Indian revenues should not be charged with the pay of the men for a single day after disembarkation, for they practically then come on the military strength of England. In the case of invalids before discharge, the actual amounts should be charged, and it should not be assumed that every invalid is detained for 50 days after arriving at Netley. It is submitted that a reduction of not less than 10,000*l.* should be made in these charges for each year.

XIII.—*Share of Cost of Pay and Allowances of Staff of Hospitals and Discharge Depôts, and Expenses of Invalids, except Pay and Travelling.*

55. The expenditure on this account charged against India by the War Office amounted in 1885–86 to 12,607*l.*, in 1886–87 to 23,199*l.*, and in 1887–88 to 30,425*l.* The way in which the calculations are worked out is shown in Appendix IX. to the claims of 1885–86, in Appendix VIII. to the claims for 1886–87, and in Appendix IV. for those for 1887–88. Every kind of charge is entered in the total amount, including divine service, military police, and buildings. In 1886–87 the total number of invalids admitted into Netley was 2,210; and of these 1,024 came from India, so that the War Office charged India $\frac{46}{55}$ths of 40,545*l.*, the total charge on account of Netley, or 18,530*l.* It is impossible to say whether the 1,024 who came from India remained as long at Netley as the balance who were admitted into Netley from elsewhere. If each invalid remained for the same time at Netley, then the calculation might be accepted, but in the absence of any information it cannot be seen whether the charge against India is justly made; and the same remark applies to the invalids at the Herbert Hospital. In 1886–87 the discharge depôt at Gosport cost 3,911*l.*, and by a similar calculation to that employed with the Netley and Herbert Hospitals, $\frac{11}{15}$ths of this, or 2,868*l.*, was charged against the revenues of India. We have not sufficient data to enable us to determine whether this is a legitimate charge, but it should not be accepted without further inquiry.

Some appeal should be made for the reduction of these charges. India maintains large military hospitals in India, and it appears just as logical to ask the War Office to pay for men who land sick in India, as many of them do, from venereal and other diseases, or to charge for the cost of the depôt at Deolali, as it is for the War Office to claim money from India on account of the hospitals and discharge depôts in England, when it is remembered that no rebate for a man arriving from India on the capitation originally paid is allowed if the man is not transferred to the reserve but is discharged as an invalid. The charges for each year should be reduced by one-half, and a reduction of at least 1,000*l.* should be made on account of the discharge depôt at Gosport.

XIV.—*Rebate on Men returning from India.*

56. This is the rebate allowed on the capitation originally paid by India according to certain rules. In 1885–86, the rebate amounted to nearly 42,000*l.*, in 1886–87 to 47,450*l.*, and in 1887–88 to 79,022*l.*; the large amount in the last year is due to the rebate in that year having been calculated with reference to the actual unexpired service of the men, to deductions for men short trained or more than one year's service, and for men transferred to Home service from depôts. The Government of India have protested against the inadequacy of the rates proposed by Mr. Bouverie's Committee, which are more favourable, however, than the all-round rate of one-third adopted by the War Office for 1885–86 and 1886–87, which is altogether too low. In the first place, the soldier enlists for 12 years, partly with the colours and partly with the reserve. The average period of his service in India is probably not more than six years, so that it may be said he serves the War Office for one-half the period of his service. That part of his service should be passed in the reserve is not a question which should enter into the calculation, because, for reasons very good in themselves, the War Office maintains a large reserve for Imperial purposes, instead of having a certain number of the men a longer time with the colours. Consequently, one-half should be allowed by the War Office from the capitation rate for men originally embarked, instead of one-third as they now give. But the capitation rate does not represent the charge to India of the men supplied to India, for to the capitation rate has to be added the charges for depôts for training recruits, which, as has been pointed out in a previous part of this memorandum, amount to a very large sum; and further, if the charge for men who deserted, died, or were discharged with less than one year's service, is to be taken into account, then a still larger sum is arrived at as the measure of the cost to India of the men landed for service in India. The charge for men who have deserted, &c., however, as previously pointed out, is objectionable. But even supposing that the charge is discontinued in the future, India should certainly claim that the rebate should be calculated on the amount actually paid by her per man embarked. There are two points, therefore, to be maintained: firstly, that the rebate should be made on the actual sums paid by India; secondly, one-half rebate should be allowed for every effective soldier disembarking in England. If, however, the proposed reduction in capitation is made for each of the three years under reference, then obviously the claim for the larger rebate would not hold good, although the principle would be maintained.

XV.—*Deferred Pay.*

57. In 1885–86 the claim is 102,985*l.*, in 1886–87 the revised claim is 117,785*l.*, and in 1887–88, 140,000*l.* This is one of the charges imposed upon India without the consent of the Government of India, and the claim is apparently made up by calculating the amount earned by service in India, and adding the amount earned during the period of training chargeable against India. How far this charge is based on actuals it is impossible to say, but it certainly appears that the rebate of one-third allowed for men passed to the army reserve is too low. In the report of the India Office Committee, it is pointed out that the eventual charge on account of deferred pay will be 3*l.* per man on the effective strength in India, or about 211,000*l.* per annum.

Conclusion and Proposed Reductions.

58. To sum up the whole case, it is submitted that the principles upon which these charges should be based are as follow: That India and its army should not be treated by the War Office as if it belonged to a separate empire; that as India has had to pay largely for changes introduced into the British service, without the consent of those responsible for the revenues of this country, liberality should be exercised in dealing with the charges for the supply and maintenance of British troops in India; that India should be considered as affording a training ground for the officers and men of the British Army; that the relative financial capacity of the two countries should be considered, and the whole matter adjusted on broad and statesmanlike views of public policy; and, lastly, that it should be recollected how great a reserve of military strength the army of India affords to the empire generally without the smallest charge on English revenues.

59. In respect to the particular charges which have been made in the claims against India, the following deductions should be made:—

	War Office Claim for 1885–86.	War Office Claim for 1886–87.	War Office Claim for 1887–88.	Approximate Reduction proposed by Government of India for each Year.	Total Reduction proposed by Government of India for the Three Years.
	£ (a)	£ (b)	£ (c)	£	£
Capitation on troops embarked for India	426,637	283,173	230,823	100,000	300,000
Charges for depôts	211,012	215,501	359,597	100,000	300,000
Agency	4,708	4,955	3,763	(a) 4,708; (b) 4,955; (c) 3,763	13,426
Charges for men deserted, died, or discharged	18,016	18,275	*8,766	(a) 18,016; (b) 18,275; (c) 8,766	45,075
Maintenance of young officers in England previous to embarking for India.	10,154	7,372	8,500	(a) 10,154; (b) 7,372; (c) 3,000	20,526
Cost of young Royal Engineer officers while under instruction.	4,332	12,273	5,415	(a) 2,000; (b) 6,000; (c) 2,700	10,700
Pay of certain officers	971	971	—	(a) 971; (b) 971	1,942
Cost of training veterinary surgeons	600	600	600	600	1,800
Cost of examining candidates for Indian Medical Service.	410	416	432	200	600
Educational establishments: Sandhurst	16,927	16,927	16,451	5,000	15,000
Educational establishments: Woolwich	10,113	10,113	9,951	3,000	9,000
Educational establishments: Staff College	2,822	2,822	2,166	1,764	5,292
Educational establishments: Netley	3,710	3,710	3,710	—	—
Educational establishments: Shoeburyness	4,983	4,983	5,063	2,500	7,500
Educational establishments: School of Military Engineering.	2,357	2,357	2,664	500	1,500
Educational establishments: Hythe	2,503	2,503	2,422	(a) 2,503; (b) 2,503; (c) 2,422	7,428
Educational establishments: Artillery College	—	—	2,760	—	—
Advance of pay	16,715	11,209	9,708	—	—
Expenses of men awaiting discharge, &c.	20,917	20,349	19,497	10,000	30,000
Share of cost of hospitals and discharge depôts	12,607	23,199	30,425	(a) 7,000; (b) 12,000; (c) 16,000	35,000
Total	770,497	641,712	722,713	(a) 268,916; (b) 275,640; (c) 260,215	804,771
Deduct— Rebate for men returning from India for service with colours or reserve, including for 1887–88 deductions for men short trained or more than one year's service, and for men transferred to Home service from depôts.	41,910	47,450	120,642		
	728,586	594,261	602,071		
Add— Deferred pay	102,985	117,785	140,030		
Total Net Claim	831,571	712,047	742,101		

* Infantry and garrison artillery only.

The foregoing deductions, amounting to 804,771*l.*, may reasonably be made from the charges put forward by the War Office for the three years ending 1887–88. It is not assumed that the figures given represent in every case exactly the amounts for which India may claim a reduction. The charges are obviously not identical in each of the years; there is a re-arrangement of the charges in 1887–88, but if there is any material alteration, it is in the way of increase. In some cases the amount may possibly be liable to diminution, in others to enhancement. All that can be said is that while in some instances the particular sums might be claimed, in other examples only general principles can guide us in arriving at a just conclusion.

60. Excluding deferred pay, as this will be altogether a separate charge, the following shows the net claims of the War Office for the three years ending 1887–88:—

	1885–86.	1886–87.	1887–88.
	£ s. d.	£ s. d.	£ s. d.
Total claim	770,497 3 10	641,712 14 7	772,713 0 0
Deduct— Rebate	41,910 11 1	47,450 18 6	120,642 0 0
Net claim exclusive of deferred pay.	728,586 12 9	594,261 16 1	602,071 0 0

The year 1885–86 was abnormal, and for the purpose of arriving at the net yearly charge it will, perhaps, be fairer to take the year 1887–88. The gross charge for this year, exclusive of deferred pay, is 722,713*l.*; from this a rebate is given of 120,642*l.*, making the net claim 602,071*l.* This amount, reduced by the amount of the proposed reduction of 260,215*l.*, leaves the net charge at 341,856*l.*, or roundly 350,000*l.*

It will, however, be necessary to ascertain whether this proposed reduction of 260,215*l.* will affect to any appreciable extent the rebate of 120,000*l.* given by the War Office, or the net charge of 350,000*l.* as above arrived at.

From their gross claim of 722,713*l.*, excluding deferred pay, the War Office allow a rebate of 120,642*l.*, the details of which are given below :—

Amount of War Office claim - - - -			£722,713
Deduct—	£	£	£
(*a*) For men embarked with service short of the training period.	1,300	27,747	27,747
(*b*) For men embarked with more than one year's service.	31,820		
(*c*) For men transferred from cavalry, horse, and field artillery depôts to Home regiments and batteries.	8,500		
(*d*) For men retained for further service with colours or reserve (including invalids who recovered).	79,022	52,682	79,022
Total - - -	120,642	80,429	106,769

The proposed reduction of 260,215*l.* will necessarily cause a decrease of about one-third in this amount, viz., from 120,642*l.* to 80,429*l.* On the other hand, the deduction under (*d*), which goes to make up the total rebate, will be counterbalanced by a proportionate increase, as the rebate under this head should, as explained in paragraph 56, be one-half instead of one-third. This addition, whilst raising the above reduced amount from 80,429*l.* to 106,769*l.*, will still be slightly less than the rebate of 120,642*l.* as given by the War Office.

With the above modification, the War Office claim for 1887–88 will stand as follows :—

	£
Gross amount of War Office claim, excluding deferred pay - -	722,713
Deduction proposed by Government of India - - - -	260,215
Reduced claim -	462,498
Deduct reduced rebate - -	106,769
Net reduced claim -	355,729

The smaller rebate does not materially affect the net War Office claim, which, after making the proposed reduction of 260,215*l.*, may equitably be taken at 350,000*l.*, in round numbers. Including deferred pay, the charge against India for 1887–88 would be 490,000*l.*

61. The charge for 70,000 men at 350,000*l.* would be at the rate of 5*l.* per head, and this is the basis upon which the Government of India may fairly ask that the charges of the War Office may be made, viz., that for every man on the actual strength of the British Army in India on the 1st May, a charge of 5*l.* per annum may be made, and that in addition a direct charge will be admitted against India for deferred pay.

62. Although it has been urged in this memorandum that the charges for the three years under consideration should be revised according to the deductions claimed, the Government of India will probably desire to meet the War Office half way, and to waive a portion of the reduction which might equitably be pressed, if an agreement be arrived at for the future as proposed in the last paragraph.

63. It is imperative in the interests of the military administration of both countries that the discussion of this vexed question should be brought to a close. It is even a more imperious necessity that the people of India should have this cause of complaint removed, while England should on her part be able to show that her treatment of India in this matter is just and considerate.

EDWIN H. H. COLLEN,
Secy. to the Govt. of India.
W. R. L. ANDERSON,
Deputy Acctt. General.

Military Dept., Govt. of India,
Calcutta, the 19th March 1890.

APPENDIX.

STATEMENT SHOWING THE CHARGES WHICH HAVE BEEN IMPOSED UPON INDIAN REVENUES AGAINST THE WISHES OR WITHOUT THE PREVIOUS CONSENT OF THE GOVERNMENT OF INDIA.

Year.	Item.	Amount.
		£
1864–65 - -	Increased rates of pay to medical officers, British service in India.	20,000
1864–65 - -	Revised scale of clothing and compensation to British Army.	20,000
1865–66 - -	Increased rates of pay to veterinary surgeons.	3,500
1866–67 - -	Gymnastic instruction for British troops.	15,000
1867–68 - -	Increase of 2*d.* a day to the pay of British soldiers, and an additional 1*d.* on re-engagement.	250,000
1867–68 - -	Formation of skeleton companies of Royal Engineers in India.	2,500
1868–69 - -	Increased pay to paymasters, quartermasters, and riding masters of British regiments.	5,000
1870–71 - -	Grant of good-conduct pay at earlier periods to British soldiers.	35,000
1871–72 - -	Introduction of instruction in army signalling and telegraphy.	4,000
1871–74 - -	Introduction of garrison instruction -	27,000
1871–74 - -	Appointment of additional subalterns to regiments in India, to allow others to attend the course of garrison instruction.	5,000
1873–74 - -	Improvements in British army schools in India.	7,000
1873–74 - -	Grant of band allowance to British regiments in India.	14,720
1873–74 - -	Readjustment of ranks of the British medical service in India.	48,000
1874–75 - - -	Revised rates of pay of British troops in India.	64,000
1875–76 - -	Grant of pay of rank to majors of Royal Artillery and Royal Engineers in India.	27,000
1876–77 - -	Increased pay of non-commissioned officers and lance rank.	4,000
1876–77 - -	Prospective charges for deferred pay, the maximum to be reached being.	211,000
1876–77 - -	Promotion of British medical officers after 12 years' service and non-effective charges by changes in the rules for compulsory retirement.	29,000
1879–80 - -	Readjustment of veterinary surgeons' pay.	1,900
1880–81 - -	Reorganisation of Army Medical Department non-effective charges.	13,320
1881 - -	Fresh charge for the pay of non-comsioned officers and men (caused by the Royal Pay Warrant of 25th June 1881).	30,000
1881 - - -	Addition of a second lieutenant-colonel and two majors to each regiment of British cavalry and infantry.	46,000
1882 - -	Increased allowance to quarter-masters and riding-masters in India.	1,200
1882 - - -	Bounty to time-expired men for extending their service with the colours.	7,000

No. 2.

(M. 771.)

SIR, India Office, February 2 1894.

I AM directed by the Secretary of State for India in Council to forward herewith a copy of a telegram* which has been received from the Government of India in regard to the increase in lance ranks and revision of pay laid down in Army Orders 102 and 110 of 1893.

The Earl of Kimberley desires me to say that he will be glad to be favoured with some explanation of the circumstances under which these changes were sanctioned.

The favour of an early reply is requested.

I have, &c.
O. R. NEWMARCH, Major-General,
Military Secretary.

The Under Secretary of State,
War Office.

* Dated 22nd January 1894.

No. 3.

(No. 30/Gen. No. 3444.)

War Office, Pall Mall, S.W.,
SIR, February 16, 1894.

I AM directed by the Secretary of State for War to acknowledge the receipt of your letter of the 2nd instant, M. 271, asking for an explanation of the circumstances under which sanction was given to the increase in the number of lance ranks and revision of the pay as laid down in Army Orders 102 and 110 of 1893.

In reply, I am to state, for Lord Kimberley's information, that the Committee presided over by Lord Wantage to consider the terms and conditions of service in the army were very strongly impressed with the necessity for obtaining the best stamp of man for the rank of corporal and lance corporal. It was brought before them in evidence that many of the better class of soldiers were deterred from accepting lance rank, with its increased expense and additional work, from the fact that under existing regulations they found themselves for a considerable period after promotion shut out from the receipt of the additional pay of the rank.

The Committee therefore strongly recommended (*vide* paragraphs 96 and 97 of their Report) that all lance corporals, and the corresponding ranks in the other branches of the service, should be on the establishment and receive the pay attached to the rank.

The late Secretary of State for War, as well as Mr. Secretary Campbell-Bannerman, gave careful consideration to the recommendations of the Committee, many of which involved heavy expenditure on both the British and Indian exchequers (*vide* Parliamentary Paper 149 of 1892).

After due deliberation, the Secretary of State was not convinced of the expediency of adopting most of these proposals, especially in view of their great cost; but finding that the greatest importance was attached by all his military advisers, as well as by the committee, to the recommendation regarding the lance ranks, sanction was given to the necessary provision being made in the Army Estimates for the current financial year.

I am to express Mr. Campbell-Bannerman's regret that this proposal, which affected Indian revenues, was not referred for the concurrence of the Secretary of State for India in Council. He, however, trusts that Lord Kimberley will approve of its application to the British troops serving in India.

I am at the same time to point out that, by the reduction in the rates of pay of the lance ranks in the cavalry, Royal Artillery, and Royal Engineers, the annual cost is considerably diminished from what is stated in the paper presented to Parliament.

It is now estimated that the normal additional cost will not exceed 16,000*l.* a year on the Army Estimates, and about 9,000*l.* a year on Indian votes.

I have, &c.
H. T. DE LA BERE.

The Under Secretary of State
for India.

No. 4.

(M. 1953.)

SIR, India Office, March 1, 1894.

I AM directed by the Secretary of State for India in Council, to acknowledge the receipt of your letter of 19th February 1894, No. 30/General No. 3444, regarding the revised establishment and pay of lance ranks laid down in Army Orders Nos. 102 and 110 of 1893.

In reply, I am desired to say that a copy of your letter will be sent to the Government of India for their information, but that, in the present state of the finances, the Secretary of State for India in Council does not feel justified in sanctioning the application to India of these changes, until the Government of India are satisfied that the increased expenditure can be met without inconvenience.

The Secretary of State for India in Council desires again to protest, as he has often had occasion to do, against the practice of the War Office in sanctioning, without any previous reference to him, measures which affect the finances of India. As these repeated protests have been of little avail, Lord Kimberley desires to suggest, for the consideration of Mr. Secretary Campbell-Bannerman and His Royal Highness the Commander-in-Chief, that in publishing any Warrants and Army Orders which have a financial bearing, it should be notified that they are not applicable to India, and that no additional pay or allowances will, under their provisions, accrue to officers or men serving in that country.

This was the course adopted in publishing the Royal Warrant for the Army Medical Department of the 27th March 1879, and the Secretary of State for India in Council thinks it desirable, for the protection of Indian revenues, that the same procedure should be extended to all similar Orders. It will then rest with the Government of India, in communication with this Office, to decide if, and how, the Orders should be applied to India, and the troops will have no cause for complaint should it be decided that their extension to India is not necessary.

I have, &c.
HORACE WALPOLE.

The Under Secretary of State
War Office.

No. 5.

(Military, No. 24.)

To His Excellency the Right Honourable the
GOVERNOR GENERAL of INDIA IN COUNCIL.

Lance Ranks: Establishment and Pay.

India Office,
MY LORD, London, March 1, 1894.

ON receipt of your Lordship's telegram of 22nd January 1894,* I caused a copy thereof to be sent to the War Office for some explanation of the circumstances in which the changes in the establishment and pay of lance ranks, notified in Army Orders Nos. 102 and 110 of 1893 were sanctioned, and I now forward a copy of the correspondence† on the subject.

2. Having regard to the present condition of your finances, I do not feel justified in sanctioning the application of these Orders to India until your Government are satisfied that the increased expenditure can be met without inconvenience.

I have, &c.
(Signed) KIMBERLEY.

No. 6.

(No. 30/Gen. No. 3448.)

War Office, Pall Mall, S.W.,
SIR, April 16, 1894.

I AM directed by the Secretary of State for War to acknowledge the receipt of your letter of the 1st ultimo, M 1953, on the subject of the revised establishment and pay of lance ranks laid down in Army Orders 102 and 110 of 1893.

In reply, I am to inform you that although, as stated in the War Office letter of the 16th February, Mr. Secretary Campbell-Bannerman regrets that no notification of these intended changes was made to the India Office before the warrant was issued, he cannot accept the views expressed, that in publishing any Warrants or Army Orders which have a financial bearing it should be stated that they are not applicable to India, and that no additional pay or allowances will, under these provisions, accrue to officers or men serving in that country.

I am to point out that the members of the Indian Government are not in a position to be aware of the circumstances which render necessary reforms and concessions in the British Army, and as they are not responsible for the recruiting of the army nor for providing terms sufficient to secure the services of men, the Secretary of State for War cannot leave it to the Indian authorities to decide whether officers and men serving in India should, or should not, have the advantage of alterations of pay, &c., which after full consideration of all the circumstances have been adopted by him, with the concurrence of the Commander-in-Chief for the army generally.

---

* M. 1953.
† To War Office, dated 2nd February 1894. M. 771.
From ditto, dated 16th February 1894.
To ditto, dated 1st March 1894.

It must be borne in mind that the conditions on which the requisite number of men can be procured are necessarily very much higher than they would be if 70,000 men were not wanted for service in India.

The circumstances under which the regulations in question have been issued were fully explained in the War Office letter of the 16th February above quoted, and the additional charge of 9,000*l.* a year which they entail upon the Indian Government is the only expense thrown upon Indian revenues as the result of the recommendations of Lord Wantage's Committee, while a considerable saving, not far, if at all, short of this extra charge, has accrued to Indian revenues by the withdrawal of one battalion of infantry from India without reducing the total force in that country, a course which was adopted in deference to the urgent recommendation of the same Committee that it was necessary to equalise the number of battalions serving at home with those serving abroad.

Care will be taken in future to bring to the notice of the India Office, as early as possible, any intended alterations affecting the pay of the army generally, and Mr. Secretary Campbell-Bannerman hopes that the Secretary of State for India in Council will take no steps to withhold the issue of lance pay under the new regulations to the British troops serving on the Indian Establishment.

I am, &c.
The Under Secretary of State for India. WM. WOODALL.

No. 7.

(M 3731.) India Office,
SIR, June 7, 1894.

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of 16th April 1894, No. 30/Gen. No. 3448, regarding the establishment and pay of lance ranks in India.

Mr. Secretary Campbell-Bannerman, it is said, cannot accept the views expressed by the Secretary of State for India that in publishing any Warrants or Army Orders which have a financial bearing it should be stated that they are not applicable to India, and that no additional pay or allowances will, under their provisions, accrue to officers and men serving in that country. You point out that the Government of India are not in a position to be aware of the circumstances which render necessary reforms and concessions in the British Army, and that the Secretary of State for War cannot leave it to them to decide whether officers and men serving in India should or should not have the advantages of alterations of pay which have been adopted by him, with the concurrence of the Commander-in-Chief.

In reply, I am to explain that it has always been an established rule that War Office Circulars and Army Orders having any financial bearing are not applicable to India until they are made so, either under instructions from the Secretary of State for India, or by the Government of India, acting on the general powers given to them by the Secretary of State for India in 1864. All Royal Warrants for the pay and promotion and non-effective pay of the army were up to the issue of the Warrant of 1881 promulgated as applying to "Her Majesty's British forces serving elsewhere than "in India." The preamble to this last warrant expressly excluded officers and soldiers serving in India from its advantages till the Secretary of State for India in Council had decided how far they should be applied to India, and all subsequent warrants specially exempt India from their operations "as regards full pay and "allowances or other pecuniary benefits."

The proposal, therefore, made in the letter from this Office of the 1st March 1894 was merely to apply to orders having a financial bearing, which might be published in the interval before the issue of a new Pay and Promotion Warrant, the principle which, as I have shown above, is always applied to such warrants. It is, in fact, a renewal of a suggestion originally made by Earl de Grey when Secretary of State for War in 1863. The Secretary of State for India in Council had at that time suggested that, in order to avoid misconceptions, all warrants affecting the pay, clothing, or privileges of the British Army should, prior to their issue, be communicated to him with a view to its being determined whether they should be made applicable to the troops in India. Earl de Grey saw no objection to the adoption of this proposal as a general rule, but, to obviate the inconvenience of delay which might occasionally result, his Lordship suggested that in cases where the Secretary of State for India in Council was unable to decide the question without a previous reference to the local authorities, the warrant should be promulgated with a notice in the margin, or in the circular accompanying it, to the effect that "its provi- "sions are not applicable to troops serving in India, "except under orders issued by that Government."

I am also to request that you will invite Mr. Campbell-Bannerman's attention to your letter of the 25th June 1881, No. 7688/487, in which it was stated, with reference to the issue of the Royal Warrant of 1881, that "a "clause reserving the rights of the Secretary of State "for India to deal with the officers and men serving in "India has been inserted in the preamble of the "warrant." Other instances can be quoted, such as Lord Northbrook's letter of February 1871, No. 57,514/27, but the above statement is, Mr. Fowler considers, sufficient to show that the War Office have always acknowledged the right of the Secretary of State for India in Council to decide whether any alterations of pay or other advantages sanctioned for the Army should or should not be extended to India.

Of the existence of this right, Mr. Fowler has no doubt whatever. The Secretary of State for War would not, he presumes, issue any such warrants, putting a charge on the revenues of the United Kingdom, without the previous consent of the Treasury, who would authorise the inclusion of the expense in the estimates submitted for the sanction of Parliament. Under the Act for the better government of India, the revenues of India are subject to the control of the Secretary of State in Council, and cannot be expended without his sanction. Such an express devolution of financial authority implies the responsibility for examining and deciding, in the interests of India, upon any proposal to lay fresh charges upon those revenues. Mr. Fowler, however, recognises that, as laid down in 1874 by the Select Committee of the House of Commons on East India Finance, "India, as a component part of the "Empire, must be prepared to share in the cost of a "system, the expense of which may be enhanced for "Imperial purposes." He admits also that the organisation, pay, and privileges decided on by Her Majesty's Government as necessary for the army as a whole should, speaking generally, and with a reservation in particular cases, be equally applicable to Her Majesty's British forces in India. But he is entitled to ask that, when any changes are under consideration which, in the opinion of the War Office, should be extended to India, he shall be consulted before the orders are issued; and, as above shown, Parliament has reserved to him the right of deciding whether they should be so extended or not. In the present case, as the report of Lord Wantage's Committee was received early in 1892, and the order as to lance ranks was not issued till June 1893, there was ample time for a reference to this Office, and, if necessary, to the Government of India.

The Secretary of State for India in Council is glad to learn from your letter under reply that care will be taken in future to bring to the notice of this Office, as early as practicable, any intended alterations affecting the pay of the army generally; but he would beg to be informed whether he is correct in assuming that any order of this nature will not be actually issued without his concurrence, or that, if time will not admit of this, the question of its application to India will be specially guarded, as was done in the preamble to the Warrant of 1881 already quoted. Unless this can be placed beyond doubt, Mr. Fowler thinks that it would be preferable to adopt the suggestion made in the letter from this Office of the 1st March 1894, No. M 1953.

As regards the pay and establishment of lance ranks in India, the Secretary of State for India in Council is not desirous that the benefits of a measure which is in itself reasonable should be withheld from the British troops in India pending the settlement of this question; and he will, therefore, address the Government of India with a view to ascertaining their opinion, in order that, if they see no objection, the warrant may now be made applicable to India.

I have, &c.,
The Under Secretary of State, War Office. REAY.

No. 8.

(Military, No. 68.)

To His Excellency the Right Hon. the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

Lance Ranks: Establishment and Pay.

India Office, London,
June 7, 1894.

My Lord,

In continuation of my predecessor's Despatch No. 24, of 1st March 1894,* I forward, for the information of your Government, copy of correspondence† with the War Office on the general question of the application to India of Army Orders having a financial bearing.

2. You will observe that the War Office call in question the right of the Indian authorities to decide whether officers and men serving in India should, or should not, have the advantage of alterations of pay, &c., which, after full consideration of all the circumstances, have been adopted by the Secretary of State for War, with the concurrence of the Commander-in-Chief, for the Army generally.

3. Against this view I have felt bound to record a strong protest. Parliament has placed in the hands of the Secretary of State for India in Council the responsibility for and control over the revenues of India, and has, therefore, secured to him the right of deciding whether any pay or other privileges sanctioned for the Army generally shall, or shall not, be allowed in India.

4. At the same time I admit that, speaking generally, and with a reservation in particular cases, the pay and organisation of the Army must be made applicable to India as to the Colonies. In this instance Lord Kimberley has already informed your Government that in the present condition of your finances, he did not feel justified in sanctioning the application to India of the Army Orders 102 and 110, of 1893, until you were satisfied that the increased expenditure could be met without inconvenience. I request that you will now take the subject into your consideration, and that you will arrange, as early as may be convenient, to apply these orders to India, of course without retrospective effect.

5. I regret much that this expenditure should have to be incurred, but on further consideration I have decided in Council that the benefits of this measure, which in itself is reasonable and calculated to promote the efficiency of the Army, cannot properly be withheld from the British troops serving in India.

I have, &c.
(Signed) HENRY H. FOWLER.

16. I forward herewith copy of a further letter from the War Office,‡ on the subject of the publication of Royal Warrants and Army Orders,§ which affect the revenues of India.

[*In continuation of my Military Despatch No.* 68, *dated 7th June* 1894.]

No. 10.

(No. 30/Gen. No. 3459.)

War Office, Pall Mall, S.W.,
August 17, 1894.

Sir,

I am directed by the Secretary of State for War to acknowledge the receipt of your Letter No. M 3731 of 7th June last, further on the subject of the establishment and pay of lance ranks in India, and of the publication of Royal Warrants or Army Orders relating to the Army generally, which, if applied to the troops in India, will affect the revenues of that country.

In reply, I am to inform you that Mr. Campbell-Bannerman feels obliged to reserve to himself the right, when the necessity arises, to issue such orders, and at such times as the interests of the British Army may, in his opinion, demand. He undertakes, however, as stated in War Office letter of 16th April last, No. 30/Gen. No. 3,448, to bring to the notice of the Secretary of State for India, as soon as they are formulated, any contemplated changes of an important character in the regulations affecting the pay, clothing, and money allowances of the Army generally, in order that he may have an opportunity of pointing out any respects in which the proposals will injuriously, or, it may be, unnecessarily, affect Indian interests.

In communicating these proposals to the Secretary of State for India, Mr. Campbell-Bannerman will fix approximately the date on which he proposes to issue the regulations for carrying them into effect. Should it occur that the Secretary of State for India has not sufficient time to form an opinion as to their applicability to the Army serving in that country, I am to point out that in such a case the interests of India are already sufficiently safeguarded by the last clause in the preamble to the Royal Warrant for Pay, which exempts India from the operation of the Warrant "as "regards full pay and allowances or other pecuniary "benefits." The preamble to the Pay Warrant, which is now issued annually, is as applicable to all warrants regulating pay issued during the year as it is to the provisions of the annual Pay Warrant itself. The same rule applies to the warrants regulating allowances and clothing, the preambles to which expressly exclude the Army in India from their operation, and Mr. Campbell-Bannerman thinks it undesirable, by a constant and unnecessary repetition of that reservation, to give rise to an erroneous idea in the mind of the public that the troops are granted advantages at home and in the Colonies which are denied to them when serving in India.

I have, &c.
The Under Secretary of State for India. WM. WOODALL.

No. 11.

(No. 48 of 1895. Military Department.)

To the Right Hon. H. H. FOWLER Her Majesty's Secretary of State for India.

Fort William,
February 27, 1895.

Sir,

With reference to the correspondence ending with your Military Despatch No. 68, dated 7th June 1894 (M-3,731), we forward a statement showing the annual charges, and certain initial charges, which have been imposed upon Indian revenues in consequence of orders by the War Office, issued in all cases without the concurrence of the Government of India, and in some cases without that of the Secretary of State for India having been previously obtained. This statement includes and continues the list forwarded with our Military Despatch, No. 70, dated 25th March 1890.

2. In your letter of 7th June 1894, you have recorded a strong protest in favour of the Indian authorities having the right to decide whether officers and men serving in India should or should not have the advantage of alterations of pay, &c., which, after full consideration of all the circumstances, have been adopted by the Secretary of State for War, with the concurrence of the Commander-in-Chief, for the Army generally. You inform us, however, that you admit that speaking generally, and with a reservation in particular cases, the pay and organisation of the Army must be made applicable to India as to the Colonies. In this we feel obliged to concur. Perhaps no better example of this can be found than in the item in our list, "1893, Revision of Farriery Establishment of "British cavalry regiments in India, about Rs. 20,000." The Commander-in-Chief in India submitted proposals to us, in 1892, for the revision of the farriery establishments of British cavalry in India, which would, in his opinion, lead to increased efficiency while making a substantial reduction in the cost of those establishments. These we forwarded to you with our recommendation for their acceptance; but, before your reply had reached us, the War Office had issued orders increasing the farriery establishments of British cavalry regiments in India. We pointed out that all the advantages considered necessary by the Commander-

---

* M. 3,731.
† From War Office, dated 16th April 1894.
To War Office, dated 7th June 1894.
‡ M. 7,938. § Printed.

in-Chief would be obtained by the system advocated by him with a saving to our estimates. But after consultation with the War Office you decided that we must accept, for British cavalry regiments in India, the establishment sanctioned for British cavalry regiments at home, and our estimates were saddled with an increased expenditure of Rs. 20,000 per annum, which was not in our opinion necessary for the efficiency of these regiments in India.

3. We feel that it is useless for us to combat the alterations in the establishments, rates of pay, and privileges sanctioned by the War Office for the British Army, but there is one thing, we think, we are, at least, entitled to ask, and we trust that you will urge this upon the attention of the War Office.

4. Our Military Budget Estimates are framed here with the utmost possible accuracy. In ordinary years no margin is left out of which to provide for extra expenditure; full establishments are not estimated for, as deduction is made for the average number short of strength. When, therefore, the War Office suddenly springs upon us an order, the carrying out of which would involve increased expenditure, we have, as a rule, to adopt one of two courses, either to defer, if it be possible, the expenditure until provision can be made in the estimates of the following year, or to obtain a fresh grant. The former course, in the case of concessions to the troops, causes great discontent. Of this, delay in the introduction of the Garrison Artillery scheme in India is an example. The two last items in our list "Excess of British troops in India "caused by home authorities sending out larger drafts "of men than the Government of India asked for," and "Changes made by the War Office in the British "Cavalry Relief Programme," are examples of the latter course being necessary. The excess of 1,500 British troops, due to the War Office having sent out that number beyond our demands, has led to expenditure of Rs. 70,000 a month beyond that provided for in our estimates under this head.

5. We would ask that when it is intended by the War Office to make concessions to troops, or other alterations which would involve expenditure in India, these concessions or alterations should not take effect till the 1st of April following the decision to introduce them, and that we should be informed that such concessions or alterations are intended to be made in sufficient time to enable us to make provision in the estimates. The existing system interferes with the correctness of our estimates, and at a time of financial pressure, such as the present, causes serious inconvenience to this Government.

We have, &c.

Enclosure of Despatch No. 48, dated 27th February 1895.

Enclosure No. 1.

STATEMENT showing the annual charges, and certain initial charges, which have been imposed upon Indian revenues, in consequence of orders by the War Office issued in all cases without the concurrence of the Government of India, and in some cases without that of the Secretary of State for India having been previously obtained.

Year.	Particulars of Charges.	Amount.	Remarks.
		£	
1864-65	Increased rates of pay to medical officers, British service, in India.	20,000	
1864-65 -	Revised scale of clothing and compensation to British Army.	20,000	
1865-66 -	Increased rates of pay to veterinary surgeons.	3,500	
1866-67 -	Gymnastic instruction for British troops.	15,000	
1867-68 -	Increase of 2*d.* a day to the pay of British soldiers and an additional penny on re-engagement.	250,000	
1867-68 -	Formation of skeleton companies of Royal Engineers in India.	2,500	
1868-69 -	Increased pay to paymasters, quartermasters, and riding-masters of British regiments.	15,000	
1870-71 -	Grant of good-conduct pay at earlier periods to British soldiers.	35,000	
1871-72 -	Introduction of instruction in army signalling and telegraphy.	4,000	
1871-74 -	Introduction of garrison instruction.	27,000	
1871-74 -	Appointment of additional subalterns to regiments in India, to allow others to attend the course of garrison instruction.	2,500	
1873-74 -	Improvements in British Army schools in India.	7,000	
1873-74 -	Grant of band allowance to British regiments in India.	14,720	
1873-74 -	Re-adjustment of ranks of the British Medical Service in India.	48,000	
1874-75 -	Revised rates of pay of British troops in India.	64,000	
1875-76 -	Grant of pay of rank to majors of Royal Artillery and Royal Engineers in India.	27,000	
1876-77 -	Increased pay of non-commissioned officers and lance ranks.	40,000	
1876-77 -	Prospective charges for deferred pay, the maximum to be reached being—	211,000	
1876-77 -	Promotion of British medical officers after 12 years' service and non-effective charges by changes in the rules for compulsory retirement.	29,000	
1879-80 -	Re-adjustment of veterinary surgeons' pay.	1,900	
1880-81 -	Re-organisation of Army Medical Department non-effective charges.	13,320	
1881 -	Fresh charge for the pay of non-commissioned officers and men (caused by the Royal Pay Warrant of 25th June 1881).	30,000	
1881 -	Addition of a 2nd lieutenant-colonel and two majors to each regiment of British cavalry and infantry.	46,000	
1882 -	Increased allowances to quartermasters and riding-masters in India.	1,200	
1882 -	Bounty to time-expired men for extending their service with the colours.	7,000	(Initial).
		Rs.	
1883 -	Increase to the annual allowance of practice ammunition of British troops in consequence of a similar increase having been authorised for the British troops at home.	2,50,000	(Approximate)
1885 -	Issue of extra ammunition to British corps for volley firing at extreme ranges and for field firing in consequence of a revised scale having been laid down in the revised Musketry Regulations.	28,620	
1885 -	Issue of revolver pistols in lieu of carbines to farriers of British cavalry regiments.	—	Cannot be stated.
1886 -	Increased allowance of practice ammunition for British troops in India owing to a representation from the Secretary of State for War to the Secretary of State for India.	70,000	(Approximate).

Year.	Particulars of Charges.	Amount.	Remarks.
		Rs.	
1888 -	Application to India of clause 5248, War Office List of Changes (steps for R. M.-L. platforms).	7,000	(Initial.)
1889 -	Increased allowance of practice ammunition to batteries of horse and field artillery in India, with reference to clause 170, of War Office Army Orders, dated 1st April 1888.	50,000	(Approximate).
1889 -	Revised programme of garrison artillery reliefs to be carried out during the year 1889-90 in consequence of alterations made by the Horse Guards.	26,656	Initial.
1891 -	Amendment of the regulations for the commutation of army pensions. (Soldiers permitted to commute their pensions at more liberal rates).	5,000	(For 1892-93).
1893 -	Introduction of the garrison artillery scheme in India, about—	1,41,000	
1893 -	Abolition of ration stoppages on boardship.	24,200	
1893 -	Revision of farriery establishments of British cavalry regiments in India, about—	20,000	
1893 -	Introduction of the squadron system of organisation into British cavalry regiments in India.—Immediate extra expenditure, Rs. 5,100, and ultimate extra expenditure.	393	
1893 -	Pay of inspectors of army schools in India.	—	Cannot be stated at present.
1893 -	Extension to India of the good-conduct pay regulations contained in the Royal Warrant, pay, of 28th March 1893.	50,000	
1894 -	Revision and extension of the conditions on which pay is given to men holding lance rank as corporals and bombardiers in the British Army.	1,00,109	
1894 -	Excess of British troops in India caused by home authorities sending out larger drafts of men than the Government of India asked for.	70,000	(Per mensem).
1894 -	Changes made by the War Office in the British cavalry relief programme.	30,826	(Initial).

No. 12.

(Military, No. 56.)

To His Excellency the Right Hon. the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

Charges imposed on Indian Revenues in consequence of orders by the War Office.

India Office, London,
May 16, 1895.

My Lord,

I have considered in Council your Excellency's Despatch No. 48, of 27th February 1895,* forwarding a statement of the charges which have been imposed on Indian revenues in consequence of orders by the War Office, issued in all cases without the concurrence of your Government, and in some cases without that of the Secretary of State for India having been previously obtained.

2. Having regard to the correspondence ending with the War Office letter† of the 17th August 1894, I do not think it desirable at present to enter on any further discussion with the War Office on this subject, or to urge upon the Secretary of State for War your proposal that any concessions or alterations of pay which may be decided on should not take effect till the 1st April following the decision. Both the rights of the soldier and the interests of India appear to the sufficiently safeguarded by the undertaking given in the above letter, by the preamble to the Royal Pay Warrant, which, as stated by the War Office, "is as applicable to all warrants regulating pay issued during the year as it is to the provisions of the annual Pay Warrant itself, and by Articles 362 and 799 of Army Regulations, India, Vol. I., under which War Office warrants or circulars do not come into force till they are made applicable to India by the Governor-General in Council.

3. As regards the last two items in the statement, I do not think any exception can be taken to the action of the War Office. As the annual requirements of India are usually from 10,000 to 12,000 men, the average strength of the Indian establishment cannot be maintained without a slight excess at some time of the year. The Home charges being paid at a fixed rate per man on the establishment, the result of a deficiency would be that India would have to pay 7*l.* 10*s.* for each man short, getting nothing in return. As it is, India bears the Indian expenses of those actually in India, without any of the home charges for those in excess of the establishment. The change in the cavalry relief was due to the requirements of the service. In similar circumstances your Government might possibly send home in the first troopship of the season a regiment which was noted in the programme as arriving at a later date; an extra charge would thus be imposed on the War Office, which would not, however, have on this account any just cause of complaint.

4. I think your Government will agree with me that the inclusion of these items, and perhaps a few others which the War Office might fairly question on similar grounds, tend to weaken the force of the argument against the action of that Department, and that it would be well to omit them from similar statements in future.

I have, &c.
(Signed) HENRY H. FOWLER.

No. 13.

(No. 154 of 1895. Military Department.)

To the Right Hon. LORD GEORGE FRANCIS HAMILTON, Her Majesty's Secretary of State for India.

Simla, August 20, 1895.

My Lord,

We have received and considered Sir Henry Fowler's Military Despatch No. 56, dated the 16th May 1895 (M. 2725), relative to the charges imposed on Indian revenues in consequence of orders by the War Office, issued without the concurrence of the Secretary of State for India, or of the Government of India having been previously obtained.

2. In now asking that our Military Despatch No. 48, dated the 27th February 1895, and the subsequent correspondence may be laid before the Royal Commission on Indian Finance, we would observe that the reservation mentioned in the second paragraph of your Lordship's predecessor's despatch above referred to, to the effect that War Office warrants or circulars do not come into force in India till they are made applicable in this country by the Governor-General in Council, is of little practical use, as it is not possible for the Government of India, without causing discontent, to withhold from British officers and soldiers serving in India concessions granted to the army by Royal warrants in operation in England.

We have, &c.

A. C. TREVOR.

PAYMENTS TO THE WAR OFFICE ON ACCOUNT OF ARMY CHARGES.

The payments made by India to the War Office on account of the British forces serving in India are divided into two classes, for effective and non-effective services.

2. By law the East India Company had, and consequently the Secretary of State in Council has, to pay the whole of the expenses connected with the British troops serving in India, from the date of their departure from, to the date of their return to, this country (see paragraphs 1 to 5 of the Abstract of Correspondence contained in the Appendix annexed to this Note).

3. Besides this, however, the Company had to defray the proportionate cost of recruiting and maintaining depôts for training recruits (paragraphs 12 to 17 and

* M 2725.
† Paragraph 16 of my Despatch No. 114, of 27th September 1894.

20 to 35). After the assumption of the direct government of India by Her Majesty, the Home charges were greatly increased, owing to the longer period of training and more expensive staff maintained at the depôts; and various committees were appointed with the view of determining either a capitation rate on the establishment in India or a charge per man supplied, which would fairly represent the proper payments by India (paragraphs 36 to 47).

4. Remonstrances were, however, made on the part of India, that she ought not to be burdened with the excessive cost caused by changes in the organisation of the Army, arising out of the peculiar requirements of England (paragraphs 48 and 50 to 55); while the War Office maintained that its difficulties and expenses arose primarily from the demands of India (paragraph 49).

5. The question was brought before a Select Committee of the House of Commons in 1874, which, while insisting on the constitutional right of the Secretary of State in Council to protest against charges improperly thrown on India, expressed its opinion that, as a component part of the Empire, India must be prepared to share in the cost of a system of which the expense might be enhanced for Imperial purposes (paragraph 56).

6. The expense debitable to India was considerably augmented by the report of a Committee over which Mr. Bouverie presided (paragraphs 59 to 66); but the Government of India demurred to many of the War Office charges (paragraphs 58 and 67); and they complained that they were made to bear the ordinary expenses of troops sent from India on foreign expeditions in which she was not interested, and did not receive a compensating allowance for the soldiers training in England at India's expense (paragraph 68); and the India Office refused to accept the report as final (paragraph 76).

7. Another element of dispute was the short service system, India declaring that it was detrimental to her as well as very expensive (paragraphs 70 and 72 to 75), and the War Office insisting on their difficulties caused by the needs of Indian service (paragraphs 69 and 71).

8. At length the Treasury intervened, owing to the state of arrear into which the payments had fallen through the objection of the India Office to pay the increased demands. Arrears were wiped out, and Lord Northbrook's Commission was appointed to fix a capitation rate (paragraphs 78 to 80).

9. The Government of India have, however, constantly maintained their objection to the heavy charges thrown upon India by the system of treating the two countries as partners with rateable shares of the expense (paragraphs 81 to 85), and by the short service system (paragraph 89).

10. Lord Northbrook's Commission made various reports, under which the claims from 1879–80 to 1889–90 were settled by the payment of specific sums, and those for 1890–91 and 1891–92 by the adoption of a capitation rate of 7*l.* 10*s.* per man on the establishment (paragraphs 86, 90, 92, 94, and 97).

11. The War Office, on the other hand, press for the inclusion of the full charge for certain (cavalry, &c.) depôts, which would not be maintained but for the wants of India, and decline to accept only a charge per man supplied, as in the case of the infantry depôts (paragraphs 97 to 108).

12. The India Office, while desirous of having a capitation rate fixed, has urged that the views of the Government of India must be considered, and demurred to the assumption of the War Office that the charge, exclusive of deferred pay, should not be less than 600,000*l.* (paragraph 99).

13. The views of the Government of India have been elaborately set forth in a letter and memorandum of 1890 (paragraphs 109 to 116). The Treasury for a long time refused to let Lord Northbrook's Commission consider this letter, in opposition to which the War Office expressed very strong view (paragraphs 117 to 120); and, eventually, the latter amended their claims for 1887–88 and subsequent years, so that the Commission merely adjudicated on the arithmetical correctness of the amount due, which they found to be approximately equal to a capitation rate of 7*l.* 10*s.* on the establishment (paragraph 121). And hence this capitation rate has been applied to all the recent accounts settled up to the present date.

14. A statement of the amounts paid for effective services is given in paragraph 122, and in 123 there is a table showing how the expenses of foreign expeditions furnished from India have been divided between the two Governments.

15. The non-effective services were from 1824 to 1861 defrayed under Act of Parliament, by a payment of 60,000*l.* a year (paragraph 124); but, after the assumption of the direct government of India by the Crown, the charge was greatly increased. From 1861–62 to 1869–70 a capitation rate of 3*l.* 10*s.* per man on the establishment in India was paid (paragraph 126); and since 1870–71 India has paid her rateable share, according to service, of each pension. At first she paid at once her full share of the capitalised value of each pension when issued (paragraphs 126, 127), but the Treasury becoming dissatisfied with the arrangement, a plan was adopted, with effect from the 1st of April 1884, by which every pension when granted is actuarily valued, and India pays the amount due for her share in each year, according to the chances of life (paragraphs 134 and 137).

16. The Government of India has, however, continually objected to any rateable division, as imposing an undue charge on the revenues of India; they maintain that, as a question of partnership, India, as a poor country, should not be put on a level with the rich country of England; that the former is treated unfairly in regard to the cost of foreign expeditions; and that, in particular, India ought not to be charged with a rateable proportion of the heavy pensionary system of England, which arose from the abolition of Army Purchase (paragraphs 131–2 and 135). But the India Office has given reasons for not pressing this line of argument on the British Government (paragraph 136).

17. In paragraph 138 there is a table of the payments made for non-effective services since 1861.

18. From the Second Report of the Committee on Public Accounts, the evidence given to which is just published, it is clear that the Treasury and War Office think that they are insufficiently paid by India for army services, and are hoping for some tribunal to be instituted which will award them a larger contribution. On the other hand, the letter received yesterday from the Government of India urges that an independent Commission should be appointed, in the evident belief that the result will be to reduce the charge upon Indian revenues. Parliamentary Paper, 255 of 1893. Question 162–63, 178–82.

22nd August 1893. H. W.

SUB-APPENDIX.

Effective Services.

1. The Act of 1781, which continued the United Company's right of exclusive trade to the East Indies, provided that the Company should pay to the King "in the East Indies, two lacks of current rupees per "annum for each and every regiment consisting of "1,000 men, already sent or hereafter to be sent by "His Majesty, his heirs and successors, to the East "Indies, on the requisition of the said United "Company; over and above the extraordinaries now "borne and defrayed by the said United Company, "and in that proportion for any greater or less number "of men, and for any greater or less space of time, "such payment to be computed, with respect to the "forces already sent, from the 24th day of June 1781, "and, with respect to such forces as hereafter shall be "sent to the East Indies, from the time of the "embarkation of such forces, and shall be paid until "the return of the said regiments to Great Britain." Act 21 Geo. III. c. 65. s. 17.

2. In 1781 the East India Company were empowered to enlist men to serve as soldiers in India, "and to "deposit and keep such men, not exceeding 2,000 at "any one time in time of war, and 1,000 at any time "in time of peace, at such place or places in any part "of His Majesty's dominions in Europe as shall be "approved of for that purpose by His Majesty, until "they can be sent to India." Act 21 Geo. III. c. 65. s. 32.

3. This arrangement was, however, altered in 1788, by the Act which recited that, "Whereas . . doubts "have been raised whether the said Commissioners" (*i.e.*, for affairs in India) "are . . empowered at any "time to direct that the expense of raising, trans-"porting, and maintaining, such forces as may be "judged necessary for the security of the British "territories and possessions in the East Indies, shall "be defrayed out of the revenues arising from the "said territories and possessions, unless such troops "are sent at the express requisition of the East India "Company," . . . . "Therefore . . be it enacted Act 28 Geo. III. c. 8.

" . . . that the said Board of Commissioners for " the affairs in India . . is . . . fully authorised " and empowered to order and direct that all the " expenses incurred or to be hereafter incurred for " raising, transporting, and maintaining, such forces " as shall be sent to India for the security of the said " territories and possessions, shall be paid, defrayed, " and borne out of the revenues arising from the said " territories and possessions." The troops were, however, to be limited to 8,045 of His Majesty's forces and 12,200 of the European forces of the East India Company, including officers in both cases. In 1791 this force was increased by 2,682 men, including officers.

Act 31 Geo. III. c. 10.

Act 33 Geo. III. c. 52. s. 127.

4. In 1792 an Act was passed, which, after reciting the arrangements under the Acts of 21 Geo. III. c. 85, s. 17, 28 Geo. III. c. 8 and 31 Geo. III. c. 10, referred to the question of accounts between the Company and the public, with special reference to the "Expedition against the Manhillas" in 1762, and the cost "of sup- " porting a number of prisoners during the war of " that period, and supplying hospitals for His Majesty's " troops in India," and directed a final settlement up to 24th December 1792. After that date, it was provided by s. 128, that "all sums issued by the . . . " Paymaster-General of His Majesty's Forces, for " and on account of His Majesty's Forces, serving in " India, or for raising and supplying recruits for the " same, shall be repaid by the . . . Company; and " that the actual expenses only which since the said " 24th day of December 1792 have been, or which here- " after shall be, incurred for the support and main- " tenance of the said troops, shall be borne and " defrayed by the . . . Company."

Act 39 Geo. III. c. 109.

5. By an Act of 1799 His Majesty was authorised " to levy, enlist, and raise such number of men as from " time to time His Majesty shall think fit, for the " special purpose of serving in the East Indies, either " in His Majesty's troops, or in the forces of the said " United Company"; and, on the petition of the Court of Directors, to transfer such recruits or soldiers to the Company's service, the Company were to pay such sums as might be agreed upon, "to reimburse the " expense of raising such recruits and soldiers as shall " be transferred into the service of the . . . Company " in manner hereinbefore mentioned; and . . . over " and above such sum, the . . Company shall " in like manner pay . . . the costs of the sub- " sistence of each recruit, from the time of his enlist- " ment to the time of his being delivered over to the " . . . Company." The number of non-commissioned officers and men to be in the Company's pay at any one time was not to exceed 2,000; and not more than 3,000 were to be at any one time maintained by the King for transfer to the Company's forces.

6. In 1805 a select committee of the House of Commons was appointed to consider "the account " between the public and the East India Company," the Company claiming from the public (or as it would now be termed, the Government), 8,570,336*l.* on account of demands accrued between 1794 and 1803, and "the demands of the public on the Company, con- " fined to the account of the Paymaster-General for " expenses attending King's troops serving in India," amounting to 1,553,600*l.* accrued from 1793 to 1803 inclusive.

The decision of the Committee on each head was " influenced partly by a consideration of the precise " orders issued at the time of directing those services, " partly by the nature of the services themselves, and " partly by a consideration of the proportionate share " of advantage from, or duty to perform, the services " in question, which appeared to your Committee " naturally to attach to the public and the Company " respectively, according to the best view they could " form of their relations, duties, and interests, within " the sphere of these operations." And they accordingly threw "the several heads of charge into three " classes: the first falling exclusively on the public; " the second exclusively on the Company; and the " third falling equally upon both."

7. In this view, the various expenses were thus arranged:—

First Class—chargeable to the Public.

"Expenses incurred by the East India Company, in India and England, for the intended expedition to the French Islands, and for the expedition against and supplies to the Cape of Good Hope";

"for the intended expedition against Manilla";

"for the purchase of vessels for His Majesty's Navy, repairs to King's ships, &c.";

"by the capture of the Danish settlements in India in 1801";

"Extraordinary expenses incurred by the East India Company, by the expedition to Egypt, over and above the charge of the troops in India";

"Ceylon balance of property, December 1801, and remittances from India subsequent to that date; also the expense of the capture of the said Island."

Second Class—chargeable to the Company.

"Expenses incurred by the East India Company, in consequence of various captures made from the French and Dutch, on the Peninsula of India, including subsistence of prisoners";

"Expense of King's troops in India, beyond the number authorised by Acts of Parliament."

Third Class—to be equally divided.

"Expense incurred by the capture and maintenance of Malacca and the Moluccas, and for the maintenance of Ceylon, deducting the profit on spices."

The result was to leave a balance of about 2,300,000*l.* due to the Company."

Parliamentary Paper, 261 of 1808, p. 6.

8. Further claims having arisen, another select committee appointed in 1808 added to the first class, chargeable to the public, the following claims:—

"Expenses incurred in India on account of the Chinese settlers at Trinidad;

"Expenses incurred on account of the expedition to the Cape of Good Hope in 1805;

"Supplies for the expedition against Buenos Ayres"; and also "the charge of prisoners of war taken at sea by His Majesty's ships," which they held to be debitable to the public, in accordance with the Act of 1792, s. 127.

They further recommended the repeal of clause 128 of that Act, "which enacts that the Company shall be " chargeable with all the recruiting and other expenses " incurred in England for regiments in India (which " in practice has been found so difficult to adjust), " and substituting other provisions which might sim- " plify the mode of stating the account, and conse- " quently facilitate its frequent and early adjustment, " and at the same time secure to the public an equit- " able compensation for that portion of its military " expenditure." They also drew attention to the claims of the company, amounting to 1,972,984*l.*, in connexion with the capture and maintenance of Malacca and the Moluccas, and the maintenance of Ceylon, which had been set aside by the method adopted by the Committee of 1805.

Act 50 Geo. III. c. 97.

9. An Act of 1810 permitted the levy of troops, "either for life or limited service," to the extent authorised by Act 39 Geo. III. c. 109, "for the special " purpose of serving in the East Indies in the forces " of the said United Company only."

Act 53 Geo. III. c. 155. s. 87.

10. In 1813 it was enacted that the limit of His Majesty's Forces in India should be 20,000, including officers, "unless any greater number of His Majesty's " Forces shall be sent to the East Indies . . . . " on the requisition of the . . . . . Court of " Directors, in which last case it shall and may be lawful " for the . . . . Commissioners to give and approve " such orders and directions, for paying, allowing, and " defraying, such sums aforesaid, in respect to such " additional forces of His Majesty so to be sent on the " requisition of the said Company."

Act 3 Geo. IV. c. 93.

11. In 1822 a final settlement of accounts to the 30th of April in that year was decreed.

Report of Sir A. Tulloch's Committee; House of Lords' Paper, 165 of 1860, p. 8 and 19-20.

12. "In 1824 certain regulations were established " between the Treasury and the India House, for the " adjustment of all charges incurred in this country " on account of the British forces in India," by which " the men required to fill vacancies, so far as they " could best be provided by volunteering in India, " were obtained in the several recruiting districts of " the United Kingdom," "and their expenses as well " as those of all the district staff, were then divided " proportionately, according to the number of recruits " raised, or to the amount issued for the pay, &c., " of those on the Indian and British establishments " respectively." In referring to these regulations at a subsequent date, Sir A. Tulloch's Committee illustrated the working of the arrangement by a reference to the September quarter of 1856, in which the net charge for pay, &c., shown on the pay lists, was 17,896*l.* 15*s.* 6*d.*, of which India's share was 9,753*l.* 1*s.*,

and, therefore, the total of the staff charges in the four districts (Liverpool, London, East India Depôt, and Cavalry Depôt at Maidstone) being 3,949*l.* 11*s.* 6*d.*, the amount to be paid by India was found to be 2,141*l.* 11*s.* 11*d.*; and, as the number of recruits raised during the quarter was 480, the staff charge was 4*l.* 9*s.* 3*d.* per recruit.

13. "For the purpose of receiving and training these recruits when they arrived from the districts, small depôts of cavalry and infantry were kept up at Maidstone and Chatham, where the recruits remained till considered fit for embarkation; and the expenses of the staff there also were borne in like manner by India. When the outbreak of the Mutiny took place in 1857, however, the establishment of these depôts was on so low a scale* . . . that they involved comparatively little expense, the whole of the cavalry, even when recruits were numerous, rarely exceeding half a regiment, and the whole of the infantry, with recruits rarely averaging more than from 1,100 to 1,200 men, for whom the staff of a battalion was considered ample as at that time about one-fourth of all the vacancies were usually filled up by volunteering in India."

14. "In 1857, the cavalry having already a larger depôt than the infantry, and the service being also a more favourite one, no increase was required to it; but the depôt of infantry, on which arm the greatest demand was anticipated to fill vacancies, was raised to the establishment below,† that large augmentations might be in readiness for the Indian army, if wanted. Upwards of 40 battalions were also sent to India, leaving behind them depôts of the above force, so that at one time nearly 19,000 men were paid by India, though available in this country."

15. Even after the emergency had ceased, the authorities did not consider it "expedient that the depôt "establishments of Indian regiments should be re- "duced lower than 90 privates, with the same officers "and non-commissioned officers as above, who, with "an average of 40 or 50 recruits constantly in this "country under instruction, and supposed to be sent "out to India twice a year, would make the total very "nearly 10,000 men. Thus, the force for which the "staff of one regiment formerly sufficed," had "swelled "into the proportions of an army," with "considerable "increase in the departmental expenses, as well as in "the general, commissariat, and medical superintend- "ing staff, and in the cost of religious establishments "and military asylums."

Report of Sir A. Tulloch's Committee; House of Lords' Paper, 165 of 1860, p. 21.

16. When the arrangement of 1824 was being made, the cost of rent or barrack accommodation was thus worked out:—

——	Infantry, at Parkhurst or Portsmouth.	Cavalry, at Maidstone.
Officer, for one year:—	£ s. d.	£ s. d.
Coals, 133½ bushels	6 3 7	5 19 10
Candles, 53 lbs.	1 5 2½	1 4 7½
Wear and tear of furniture, 10 per cent.	0 14 4	0 14 4
	8 3 1½	7 18 9½
Rent	6 0 0	6 0 0
Total, per officer	14 3 1	13 18 9

——	Cavalry.	Infantry.
Captain	1	1
Lieutenants	2	2
Ensign	—	1
Colour-Sergeant	—	1
Sergeants	9	5
Trumpeters	4	—
Drummer	—	1
Corporals	—	5
Privates	28	—

† Captains 2
Lieutenants 2
Ensigns 2
Sergeants 10
Drummers 4
Corporals 10
Privates 190

——	Infantry, at Parkhurst or Portsmouth.	Cavalry, at Maidstone.
Men: 12 per room for infantry; 8 per room for cavalry:—	£ s. d.	£ s. d.
Coals, with dipped candles	0 12 2½	0 17 9½
Straw, 144 lbs.	0 2 3½	0 3 7
Brooms, 52	0 1 1	0 1 7½
Wear and tear of bedding, furniture, and utensils, 50*l.* for 100 men, 12½th	0 10 0	0 10 0
	1 5 6½	1 13 0
Rent	0 10 0	0 12 0
Total, per man	1 15 6	2 5 0

17. The numbers to which the Company's forces were limited were raised in 1853 to 20,000 in India, including officers, and to 4,000 non-commissioned officers and private soldiers in England; and this limit was further extended in 1859, by an Act which empowered the Secretary of State in Council to maintain in India 30,000 European troops for the Indian army of Her Majesty, excluding commissioned and non-commissioned officers, and in England 6,000 non-commissioned officers and private men.

Act 16 & 17 Vict. c. 95. s. 31.

Act 22 & 23 Vict. c. 27.

18. By the Act of 1858 for the better government of India, the revenues of India must not, without the consent of Parliament, be applied to defray the expenses of any military operations beyond the external frontiers, except for preventing or repelling actual invasion, or under other sudden and urgent necessity. The power to have a separate European force for the local service of Her Majesty in India was repealed in 1860; and the transfer of the local soldiers to the general forces was rendered legal in 1861.

Act 21 & 22 Vict. c. 106. s. 55.

Act 23 & 24 Vict. c. 100. Act 24 & 25 Vict. c. 74.

19. The effective strength of British regiments serving in India, on the 1st of April, during the 24 years from 1834 to 1857, averaged 24,133, the minimum being 17,345 in 1839, and the maximum 29,480 in 1851. The East India Company's forces, during the 40 years from 1818 to 1857, averaged 11,758, the lowest numbers being 9,275 in 1819, 9,353 in 1820, and 9,354 in 1839, and the highest being 16,241 in 1856.

20. In 1860 a committee, under the presidency of Sir Alexander Tulloch, was appointed to consider whether the payments by the Indian Government could not be based on "an average rate proportioned to the number "of British troops serving from time to time in the "territory," and "to arrive at the proper average "charge on account of effective services for a given "number of men." The specific questions put for the Committee to consider were,—

"(1.) The annual payment required to reimburse the British Exchequer for the charge incurred in Great Britain in raising troops for service in India, including the expense of the depôts of Indian regiments, the pay of officers on leave of absence, and generally every expense, exclusive of the charges comprehended under the second head, and of passage money and expense of transport. The rate to be fixed separately for infantry, cavalry, and artillery, so as to meet any alterations which may be required from time to time in the respective numbers of these arms employed in India, and to be, for every 1,000 men serving there, determined by the average of 12 monthly musters.

"(2.) The annual payment required per 1,000 men in India of all arms of the service, to meet the charge of pensions to discharged soldiers pensions to officers wounded in action, retired full pay, or other military allowance on retirement; and pensions to widows of officers, compassionate allowance to children, gratuities, and other dead-weight charges."

21. The Committee were also desired to "consider "whether it would not be practicable to fix a certain "annual charge per 1,000 men, to be paid out of the "Indian revenues, to cover the expenses of passage

" money of officers and transport of troops to and from " India, leaving all the arrangements for that service " entirely in the hands of the War Department."

Lords' Paper, 165 of 1862, p. 7.

22. The payments made in England by the East India Company to Her Majesty's Government, on account of the British regiments employed in India from 1834 to 1857, had been as follows:—

	£
For depôts and recruiting districts,—	
Pay of men, levy money, &c. -	1,638,736
Staff officers and expenses - -	391,890
Barrack accommodation - -	82,109
Forage - - -	37,759
For regimental agents' expenditure,—	
Pay of officers, agency, &c. - -	2,093,137
Pay of non-commissioned officers and men of regiments going or returning, for the period of the voyage only - - -	202,719
Total for 24 years -	£4,446,350
	£
Or an average per annum of -	185,264
To this was added, "for the differ- " ence in the number of men " embarked for and disembarked " from India, whom it has been " the practice to pay for at an " agreed rate per man, in order " to compensate the British Go- " vernment for the cost of re- " placing soldiers who volunteer " to remain, or for any diminu- " tion from other causes in the " numbers of a regiment com- " pared with its strength when " originally embarked for that " country" - - -	9,907
	£195,171

"The average number of troops then in India was " 2,988 cavalry and 21,146 infantry, or 24,134 of all " ranks," which indicated "an average expenditure of " about 8,000*l.* annually for every 1,000 men of those " arms serving in India, whereof it is computed that " about 12,319*l.* was for cavalry, and 7,391*l.* for infantry, " respectively."

23. But, owing to the important changes which had taken place, particularly since the Mutiny, which added greatly to the charge, it was necessary to consider the reasons for that increase. After reciting the arrangement of 1824, and the increased cost of the depôt establishments, their remarks on which have been quoted above, the Committee proceeded to discuss the question of rent or barrack accommodation. They could not find the reason for accepting in 1824 "an " amount which, according to the expenditure of the " present day, would not have sufficed to keep the " buildings in repair; . . . . most probably " the original cost was altogether left out of consi- " deration." "The actual cost of barracks for different " arms, all of which have been constructed within the " last 12 years," had averaged 86*l.* 15*s.* 9*d.* per man " of all arms; and, "assuming 5 per cent. on this " outlay as a fair consideration in the form of rent, and " to provide what is required to keep the barracks in " repair, with a sinking fund also to rebuild them " when necessary, 4*l.* 8*s.* 6*d.* per annum would have to " be charged for each man's accommodation; no extra " rate would be required for the officer, as the cost of " accommodation for all ranks is included together."

Ditto p. 8.

24. For coal and candles, wear and tear of bedding, furniture, and utensils, straw for the beds, and brooms for sweeping the rooms, the rates were retained, "because, though the fuel and light consumed in " barracks has been considerably increased by the " regulations of late years, there is good reason to " suppose that the price of the issues has diminished " in nearly a corresponding degree; but, as the number " of officers has been doubled and the Staff increased, " a charge to the extent of at least 30*l.* a year must be " added for extra fuel and light to each depôt on that " account, or about 3*s.* 8*d.* per man for the 164 who in " infantry are likely to constitute its average strength, " with recruits and invalids."

25. The barrack staff being taken at 5*s.* 3*d.* per man, the total cost was thus stated:—

	£	*s.*	*d.*
" Rent per man of all ranks - -	4	8	6
" Coal, candle, and other barrack ex- expenses - - -	1	5	6
" Extra charge for coal, candle, &c., for increased number of officers beyond the old depôt establishment, equal to per man of all ranks, say - - -	0	3	8
" Proportion of cost of barrack staff -	0	5	3
" Per man of infantry -	£6	2	11

"A slight addition might be required for cavalry, but it is too small to be made a matter of account at present."

26. "The cost under the above heads will be found almost identical with the allowance of 4*d.* per day, or 6*l.* 1*s.* 8*d.* annually, granted for each soldier when, being billeted, he is supplied with the same accommodation and issue by publicans and private establishments instead of by the Government, and which rate the British Treasury seems to have good right to exact from others as they have to pay it themselves."

27. The average rate paid under the arrangement of 1824 was found from the accounts to have been about 2*l.* 5*s.* per man of all ranks; so that the increase proposed was 3*l.* 17*s.* 11*d.* per man. This would give 600*l.* a year, on an establishment of 114 non-commissioned officers and privates, and 40 recruits sent out twice a year.

Lords' Paper, of 1863, p. 12.

28. The cost of a free kit on enlistment, which had recently been allowed, was 3*l.* 6*s.*, against which had to be set a reduction of about 1*l.* in levy money, giving an increase of 2*l.* 6*s.*, "which, for 80 recruits a year, " the estimated number required, with volunteers, to " keep a regiment of 1,000 men in India up to its " establishment, would be 184*l.*"

Ditto, p

29. But the Committee further showed that "the " cost of an infantry recruit, by the time he is em- " barked for India, exclusive altogether of the depôt " establishment (except staff), and supposing the " average period of his training to be 4½ months," was 30*l.*, while the payment per man for the difference between the strength of regiments proceeding to and returning from India had only averaged 14*l.* 5*s.*, at which cost, therefore, India had retained volunteers for her service; "and, as the men who go out with " their regiments to India are thoroughly formed " soldiers, and generally in the highest state of " efficiency and discipline, it is obvious that they can " never be sufficiently paid for at a lower price than " an ordinary recruit." Supposing then that "the " difference between the numbers embarked and dis- " embarked were brought so low even as 20 men per " regiment annually, there would be an expense to be " provided beyond that of the previous 24 years to the " extent of 20 × 16, or 320*l.* for each depôt." "A " further addition is still required, however, as the " troops sent out are of very different standing, in " respect of service, to those who return—the former " being for the most part men of four or five years' " service, while many of those who return are between " 15 and 20, so that usually they require being " replaced by new levies at the expense of the Home " Government within a few years, often within a few " months after their return. In fact, a process has " thus been going on for many years of exchanging " young lives for old ones, much to the disadvantage " of the British Treasury, and which can only be " obviated by regulating the amount to be allowed for " soldiers returning, not by their actual number, but " by the proportion which their service bears to the " service of those by whom they are replaced." From this point of view the Committee found that five regiments coming home should be reckoned as only equal to three replacing them; and therefore they considered the increase on each depôt to be 533*l.*, rather than 320*l.*

Ditto, p

30. With regard to the depôt under the old system, the Committee found " that its apparently low estab- " lishment was altogether illusory, and that, in point " of fact, it has always been necessary to retain a " considerable proportion of the recruits in order to " carry on the duties of raising, training, and discip- " lining the remainder, however unfit they might have " been for such a purpose." On the average from 1849 to 1853, " 57 men were always left at the depôt

"on these occasions; and, as the authorised establishment was only 12, and the recruits enlisted during the preceding three or four months, who perhaps might not have been sufficiently trained to be sent out, could not, as a general rule have much exceeded the same number, there must have been about 30 privates constantly at home, doing the duty usually required at a depôt, and paid for by the Indian Government, *though not on its establishment;* and, therefore, in calculating the recent increase to the depôt, that number must be assumed as if they had really belonged to the old establishment."

Lords' Paper, 165 of 1862, p. 28.

The "estimated annual charge for the depôt of an infantry regiment in India prior to 1854" was thus shown:—

	£	s.	d.	£	s.	d.
1 Captain at 11*s.* 7*d.* -	211	7	11			
2 Lieutenants at 6*s.* 6*d.* -	237	5	0			
1 Ensign at 5*s.* 3*d.* - -	95	16	3			
6 Sergeants at 2*s.* -	219	0	0			
1 Drummer at 1*s.* 1*d.* -	19	15	5			
5 Corporals at 1*s.* 4*d.* -	121	13	4			
				904	17	11
Average charge for allowances to non-commissioned officers and rank and file, beer money, allowances, &c. - - - - -				16	0	0
Ditto, levy money - -				8	0	0
Ditto, contingencies - - -				32	0	0
				960	17	11
Staff charges, 17 per cent. on the above charges, exclusive of pay of officers - - - -				71	0	0
Barrack accommodation at 1*l.* 18*s.* 6*d.* per man - - - - -				21	6	0
Excess price of bread and meat beyond the stoppages from men's pay - - - -				14	0	0
				1,067	3	11

To this the Committee added the following, on the 30 additional men present on an average:—

Pay and beer money at 1*s.* 1*d.* -	599	2	6
Barrack accommodation at 1*l.* 15*s.* 6*d.*	53	5	6
Staff charges, 17 per cent. - -	110	0	0
Levy money and contingencies -	68	3	2
Excess price of bread and meat -	24	10	0
Making the revised cost of the old establishment - - -	£1,922	5	1

Ditto, p. 29.

32. The "estimated annual charge for the depôt of "an infantry regiment on the East India Establishment "in 1861" was thus stated:—

	£	s.	d.	£	s.	d.
2 Captains at 11*s.* 7*d.* -	422	15	10			
2 Lieutenants at 6*s.* 6*d.*	237	5	0			
2 Ensigns at 5*s.* 3*d.* -	191	12	6			
10 Sergeants at 2*s.* -	365	0	0			
4 Drummers at 1*s.* 1*d.*	79	1	8			
10 Corporals at 1*s.* 4*d.* -	243	6	8			
90 Privates at 1*s.* - -	1,642	10	0			
				3,181	11	8
Average charge for allowances to non-commissioned officers and rank and file, beer money, marching allowances, &c. - -				105	0	0
Ditto, levy money, 13 per cent. on non-commissioned rank and file -				50	0	0
Ditto, contingencies - - -				209	0	0
				3,545	11	8
Staff charges, 17 per cent. on the above charges, exclusive of pay of officers - - - -				457	0	0
Barrack accommodation, at 1*l.* 15*s.* 6*d.* per man - - -				202	7	0
Excess price of bread and meat beyond the stoppages from men's pay - - - -				93	0	0
				£4,297	18	8

Ditto, p. 11.

The excess of 4,297*l.* 18*s.* 8*d.* over 1,922*l.* 5*s.* 1*d.*, that is, 2,375*l.* 13*s.* 7*d.*, the Committee held to be the "real "increased cost of new depôt establishment."

33. Combining the foregoing rates, the Committee thus calculated the average rate per 1,000 men of infantry serving in India:— Lords' Paper, 165 of 1862, p. 12.

	£
Average, 1834 to 1857 - -	7,391
Increased barrack accommodation -	600
Free kit for 20 recruits annually -	184
Difference of establishment between a regiment going out and returning -	533
Increased cost of depôt establishment	2,375
	£11,083

34. For the cavalry, although they required six instead of 4½ months' training, the total cost of the depôt was nearly the same as for the infantry, owing to the more moderate establishment maintained; but, as it was incurred to keep only 707 men in India effective instead of 1,000, the average rate for cavalry per 1,000 had to be raised to about 15,800*l.*, and for the artillery depôt, allowing for the recruits requiring 12 months' drill, the average cost per 1,000 was calculated at 23,650*l.* Ditto, p. 13.

35. The Committee pointed out that the foregoing estimates included no charges for general staff, medical staff, commissariat staff, religious instruction, military departments, or Chelsea College and asylums. Together, the Indian share of these charges might be reckoned at 25,635*l.* per 10,000 men at the Indian depôts; "but, if spread over the whole force in India, "they would have added only about one twenty-sixth "part to the average rate," and, therefore, "would "not have made any very important difference on the "general results." As to these last charges, however, the War Office considered that India's liability "might "fairly be set off against the advantage derived by "this country from the presence here of the depôts of "regiments serving in India, the expenses of which "are defrayed from the revenues of India, and which "are available, in cases of emergency, for other "service." Ditto, p. 14. Ditto, p. 6. Ditto, p. 76.

36. Before the Committee had submitted their report, it became necessary to determine some rate for adoption in the estimates; and they recommended as a provisional arrangement the payment by India of 10,000*l.* per annum for every 1,000 men of all arms in India; and it was agreed to accept this capitation rate of 10*l.*, the number on which it was to be payable being "determined by the average of 12 monthly muster rolls," and the payment including "all expenses "incurred on account of regiments and recruits for "the service of India, and for maintaining them until "arrival there, and after embarkation from India, "except clothing, arms, and accoutrements, which are "now subject to special regulations, and also except "passage money and transport." In assenting to this, however, on the part of India, on the 6th of March 1861, Sir Charles Wood desired "that it should be "clearly understood that, when the time shall arrive "for determining the rate to be permanently paid "from the revenues of India on this account, the "present temporary arrangement is not to be regarded "as an admission by the Secretary of State in Council "that the rate now agreed on is one which India can "be justly called on to pay, when the benefit resulting "to Imperial interests from the employment of so "large a portion of the British Army in India, and "the consequent maintenance of the depôts in this "country, is taken into consideration." Ditto, p. 71. Ditto, p. 72.

37. The War Office, with the concurrence of the Treasury, assented, on the 11th of June 1861, to the acceptance of the capitation rate, on the understanding that "the payment in question will not include trans-"port, passage money, clothing, arms, accoutrements, "or other stores, nor any expenses chargeable to the "revenues of India on account of the instruction to "officers of the Royal Artillery, Royal Engineers, or "Medical Service, nor any other charges which were "not taken into consideration by the Committee in "arriving at the average rate which they have "recommended." Ditto, p. 73.

38. The arrangement was subsequently renewed from time to time; and the capitation rate of 10*l.* remained in force from 1861–62 to 1869–70.

39. In 1867, a departmental committee (over which Major-General Jameson presided) was appointed to determine the sum to be paid by India for engineers, non-commissioned officers, and sappers; and they fixed the following rates, exclusive of advance of pay on embarkation and clothing then in possession of the Appendix to 4th Report of Select Committee on East India Finance, 1874, p. 210.

men:—Quartermaster-sergeant, 190*l.*; colour sergeant, 150*l.*; sergeant, 140*l.*; corporal, 125*l.*; second corporal, 110*l.*; lance corporal and sapper, 90*l.*

Letter from War Office, 9th Jan. 1869.

40. In January 1869, the War Office proposed to terminate the capitation rate, with a view to the claims from the 1st of April following being "adjusted on the "principle of actual charges," and a committee (known as Mr. Seccombe's Committee), was appointed to make the necessary arrangements. Pending their inquiry the capitation rate was continued through the year 1869–70.

Appendix to 4th Report of Select Committee on East India Finance, page 226.

41. In their first report, dated the 11th of March 1869, the Committee brought "prominently to notice "the very heavy charge attending the present system "of Indian depôts, as shown in the cost to the "Imperial Government of a recruit from the date of "his enlistment to that of his embarking for India." The number of recruits sent to India from the East India Company's depôt, at Warley, during the 10 years from 1850 to 1859, had been 541 engineers, 8,018 artillery, 3,740 cavalry, and 12,484 infantry, or a total of 24,783; the average cost on the 10 years was 19*l.* 14*s.* 10¼*d.* per man, or, omitting the exceptional years of and after the mutiny, it had been 26*l.* 7*s.* 5*d.* On the other hand, from 1861–62 to 1867–68 the establishment of the Indian depôts for cavalry and infantry had averaged 7,381, the actual strength had averaged 8,494, the number of men embarked in drafts had averaged 2,196, and the average cost of each recruit embarked had been 205*l.*—a figure which no doubt should be somewhat modified owing to the small number of recruits sent out in one or two exceptional years, when the strength of the regiments in India was being very largely reduced. "The War Office depôts "include a very large staff, whilst the Warley depôt "was conducted by a very small number of commissioned and non-commissioned officers, for the supply "of recruits to nine regiments of infantry, and the "whole of the artillery in India, including a small "body of engineers." It was a question whether the Imperial Government had been recouped by India for all the charges incurred; but whatever loss had resulted to the Imperial Government must be attributed mainly to the excessive amount of the depôt charges.

Ditto, p. 211.

42. Thereupon, another committee, over which Major-General Jameson presided, was appointed "to "examine generally the question of the establishment "of the Indian depôts." They recommended that time-expired men and those about to be discharged should not be sent, on their return from India, to the depôts of their regiments, but should be quartered at some consolidated depôt, whence they could be sent direct to their homes, or, if fit for further service, to the regimental depôt. They also recommended that recruits should be raised at the periods which would secure their being fully drilled in time to be sent out in the drafts of the first season after their enlistment. "Thus arranged, the present depôt system would be "sufficient to supply 75 recruits per annum to each "battalion of infantry, and yet keep within the depôt "establishment," a plan by which "upwards of 3,500 "recruits in drafts would be available for embarkation "for India at the end of the training." Two members of the Committee, General Jameson and Mr. Milton, considered that 80 privates, including recruits, would be a sufficient average strength for a depôt of infantry; but the third member, Colonel Egerton, insisted on an establishment of 96 privates as "the lowest average "from which it can be hoped the service companies of "regiments in India may be maintained in a state of "efficiency, and complete in numbers."

Ditto, p. 230.

43. Owing to the changes thus recommended in the depôt establishments, Mr. Seccombe's Committee, in its second report, dated 24th November 1869, abstained from fixing a schedule of prices per man, and advised the repayment of actual charges as under the system of 1824, omitting, however, furlough pay and advances to regiments proceeding to or returning from India, which should be separately adjusted; remittances from India should be paid direct by the India Office, and the charge for agency be revised. As to charges of which India was liable only for a proportion, the Committee recommended a rateable division of the net disbursements in each recruiting district and depôt battalion in which there might be recruits for India, except that the accommodation for barracks should be calculated on the average number belonging to regiments on the Indian Establishment who might be accommodated in barracks on the first of each month. For the difference of numbers of men on passage to and from India, the Committee calculated that 45*l.* 16*s.* 10*d.* in the case of cavalry, and 27*l.* 7*s.* 11*d.* in the case of infantry, should "be charged for every non-commissioned officer or "soldier embarked as reliefs for India, with regiments "of the line;" and that credit should be given at the same rates for each man "disembarked with regiments, "who at the date of disembarkation shall not be within "two years of the completion of his term of service." "This adjustment will not apply to drafts sent from "this country to India, as India will have paid for "them, nor to detachments of invalids or time-expired "men returning from India." For horse artillery the Committee fixed 47*l.* 10*s.* 7*d.*, and for garrison and field artillery 40*l.* 11*s.* 5*d.*, as the rates per man. "The "practice at present adopted of not sending out men "who have less than two years to serve, should be "continued; and, in calculating the number on which "the prescribed sums are to be paid for effective men "going out or returning with their corps, the number "of men left with the depôts who may not be within "two years of the termination of their period of "service should be added to the number embarking; "and, in like manner, the number of soldiers and "recruits of three months' service, and upwards, "serving with the depôt at the date on which the order "was issued for the recall of the regiments from India, "should be added to the number of men disembarking "in this country with the corps." The Committee concluded by again referring "to the heavy expense of "the Indian depôts as at present constituted," which was "too large when compared with that incurred "prior to the mutiny in India," and "excessive when "compared with the charge incurred by the East "India Company in the maintenance of their depôt at "Warley."

44. The India Office members of the Committee, while concurring generally in the Report, recorded their opinion that, as all expenses of raising, "training, "maintaining, and pensioning, the troops whose "services are lent to India, are paid from Indian "revenues, India is fairly entitled to a considerable "credit for the value to the Imperial Government of "the presence in this country of the staff and men "engaged in course of training. The troops are "available to meet any emergency for which a home "garrison is required; and the resignation by the "War Office of any charge for a proportion of the "expenses of the general, medical, and commissariat "staff, &c., specified . . . . as a set-off to that "advantage, appears . . . entirely inadequate." They "were also of opinion that the periods of training, "on which the charge for difference of numbers of "men is based, are longer than are necessary with "reference to the requirements of India; and that, as "the East India Company formerly found it safe and "expedient to send soldiers to India after very short "periods of training, the adoption of a somewhat "similar course would tend greatly to reduce the "charge on this account, an object that would be "further facilitated by a reduction in the number and "strength of the depôts."

Appendix to 4th Report of Select Committee on East India Finance, p. 237.

45. In a third Report, dated the 28th of February 1870, Mr. Seccombe's Committee said that since the date of their Second Report, "important changes have been "proposed in the constitution of the army of India, and "propositions have also been made for recruiting the "army on a new principle, which involves the breaking "up of the cavalry depôt and infantry depôt battalions, "attaching, in lieu of the former, a home troop of each "regiment on service to a regiment of similar equipment at home; and, of the latter, two companies of "each battalion abroad to a battalion at home, eight "companies to be on foreign service, and 12 companies "on home service." "The recruits annually required "for each regiment of cavalry in India, are estimated "at 32, and, for each battalion of infantry at 60; as, "under the proposed arrangements, there would be "nine regiments of cavalry, and 50 battalions of "infantry in India, the annual drafts required would "be 288 cavalry, and 3,000 infantry recruits. . . . "The propositions placed before the Committee are, "that ten months is to be regarded as the average "period of training of each cavalry, and seven months "of each infantry recruit; and that payment should "be made from Indian revenues for recruits at rates "per man to be calculated with reference to those "periods. It is proposed by the members appointed "by the Secretary of State for War that a proportion "of the staff charges of each regiment or battalion "should be included in the calculation; but this is

" objected to by the members appointed by the " Secretary of State for India, on the ground that the " staff charges in question would not be increased in " consequence of one troop or two companies being " attached to each regiment or battalion, and that the " object to be kept in view is the repayment to Imperial " revenues of expenditure incurred for the purposes of " the Indian Government, and not the relief of the " Imperial Exchequer from charges which it would " incur independently of any Indian requirements." The calculations brought out the following results :—

	£	s.	d.
Charge for a cavalry recruit for 10 months - - - -	58	5	9
Charge for the troop depôt for 43 recruits, per man - -	44	4	8
	102	10	5
If a proportion of pay of regimental staff in England be added, per recruit - - - - - -	5	16	8
	108	7	1
Charge for an infantry recruit for seven months - - -	30	9	4
Charge for the two depôt companies for 80 recruits, per man - -	17	2	0
	47	11	4
If a proportion of pay of regimental staff in England be added, per recruit - - - - -	2	12	11
	£50	4	3

No provision was made for deaths or desertions among the recruits, nor for those unable through ill-health to embark for India. Hitherto this charge had been heavy; " but, in future, as the recruits would form part " of a home regiment or battalion, instead of a depôt " battalion, it may be anticipated that their association " with a larger body of trained men would reduce " materially the extent of desertion." It would, in the Committee's opinion, be sufficient to add one-third on account of such charges; and, therefore, the rates payable by India would become 136*l.* 13*s.* 11*d.* for cavalry, and 63*l.* 8*s.* 5*d.* for infantry, or, if the regimental staff charges were included, 144*l.* 9*s.* 5*d.* and 66*l.* 19*s.* 0*d.* The expenditure actually incurred for invalids or time-expired men awaiting their discharge should not be included in the payment for recruits, but be paid independently, the maximum period for which India should be liable being six months from disembarkation. To the charge for difference of men on passage mentioned in the Second Report, an addition of 10*l.* 0*s.* 5*d.* should be made for forage in the case of each cavalry soldier. India would pay directly the colonels' allowances and furlough pay. The Committee concluded by expressing their concurrence with that over which General Jameson presided, " that, for the " purpose of raising and training the number of recruits " required for battalions of infantry in India, it is not " necessary to maintain more than one company with " the depôt in this country."

46. In a separate note Mr. Seccombe and General Jameson expressed their opinion that any rates based on the propositions laid before the Committee must be excessive; and they again referred to the rate of 26*l.* 7*s.* 5*d.* as that paid by the East India Company for artillery and infantry recruits. " We are fully aware," they said, " that the changes made in the terms of " enlistment, pay, clothing, &c., would have increased " the charge as incurred by the East India Company; " but the proposed establishments for, and the period " of, training . . . appear to us to be enormously " in excess of what can be possibly required for the " purpose of properly recruiting the British army in " India."

Appendix to 4th Report of Select Committee on East India Finance, p. 241.

47. In a fourth report, dated the 12th of April 1872, Mr. Seccombe's Committee examined the cost of artillery recruits, and they then summed up the proposed rates as follows:—

For Difference of Men on Passage.

	£	s.	d.	£	s.	d.
Cavalry - -	45	16	10	55	17	3
Forage - -	10	0	5			
Infantry - - - -				27	7	11
Royal Horse Artillery - -				47	10	7
Royal Artillery - - -				40	11	5

" These rates to be chargeable on the numbers embarked with regiments of cavalry and infantry and troops and batteries of artillery as reliefs, and also on such non-commissioned officers or men, if any, as may be sent from regiments, troops, and batteries, not belonging to the Indian depôts, India being reimbursed at the same rates for every non-commissioned officer or soldier disembarked who shall not be within two years of the completion of his term of service."

For Recruits.

	£	s.	d.	
Cavalry - -	136	13	11	
Infantry - -	63	8	5	
Royal Horse Artillery - -	78	14	8	With an addition of 13*l.* 11*s.* if the recruit shall have passed through the riding-house establishment.
Royal Artillery, mounted -	59	2	10	
Royal Artillery, dismounted -	58	9	3	

These rates were to be adopted for 1870–71 and 1871–72; but, as great changes were being made in the constitution of the army, the rates should then be reconsidered. The India Office members of the Committee again protested against the basis of the calculations, as involving a needlessly expensive system.

48. While this report was under consideration, a strong remonstrance was addressed by the Duke of Argyll to the War Office, respecting the excessive cost of the recruits for India. His Grace could " not " consider it either politic or just to lay upon the " revenues of India the entire cost of an organisation " for furnishing recruits to that country, which ex- " perience has shown to be far beyond what is needed " for that particular purpose. The subject, important " as it is at the present moment, on account of the " large annual payment which India is called upon " to make for this purpose, becomes still more " important in view of the possible effect of the new " system of enlistment under the Army Enlistment " Act of last year (53 & 54 Vict. c. 67), by which the " annual number of recruits for India will be con- " siderably augmented. . . . It appears to his " Grace that general depôts might be established with " special relation to the regiments in that country; " and that one such depôt would suffice for the " artillery, one for the cavalry, and three for the " infantry branch. . . . . The establishment of " officers at the Warley depôt under the East India " Company consisted of five combatant officers, four " of whom constitute a permanent staff, while the " fifth was usually an officer on furlough from India. " With this staff and a suitable establishment of non- " commissioned officers, a force consisting of nine " regiments of infantry and of about 7,000 artillery " was maintained and supplied regularly with recruits " at an average cost of 26*l.* 7*s.* 5*d.* per man. Recog- " nising the importance of having able and experienced " officers at depôts of this nature, the Duke of Argyll " assumes that the number of commissioned officers " may be, in proportion to the men, far smaller than " with a regiment, the proper drilling and instruction " of the men being dependent mainly upon the " presence of an efficient staff of non-commissioned " officers; and he presumes, therefore, that the esta- " blishment of commissioned and non-commissioned " officers for such depôts would be regulated ac- " cordingly." After combating Colonel Egerton's arguments in favour of regimental depôts, the Duke of Argyll observed " that a further argument might be " found in favour of the proposed system of general " depôts, in the fact that service in India is believed " to be popular with the army, and that the assurance " that, in presenting themselves at such depôts, they " would be enrolled for that service, would promote " enlistment generally, and tend to facilitate the " completion of the battalions in India to their proper " numbers with men of suitable age and qualifications. " Lastly, such a system would tend greatly to simplify " the question of expenditure as between the Home " and Indian Governments, as there could be no doubt " as to the expenditure of establishments framed " and maintained solely for Indian purposes." " The " abolition of a local European army in India was a " measure dictated by considerations of Imperial " policy; but it is questionable whether that measure

Appendix to 4th Report of Select Committee on East India Finance, p. 245.

" could have been so easily carried, if it had been " fully known how great would be the additional " burden thrown upon the Government of India. Part " of that addition was unavoidable, and may not be " too great a price to pay for the expected advantages; " but . . . this additional cost should be kept " within the limits of real necessity, and should not " be aggravated by the maintenance of a system of " recruiting which appears to be extravagant, and " to have no reference to the exigencies of Indian " service."

Appendix to 4th Report of Select Committee on East India Finance, p. 248.

49. The War Office replied on the 14th of April 1872, that "Mr. Cardwell is clearly of opinion that the cost " to this country of supplying British soldiers to " maintain the establishment of European troops in " India is by no means represented by the disburse- " ments made on the several individual soldiers or " recruits drafted to India. It is the policy of the " Indian Government to keep the numbers of the " European troops serving in that country at the lowest " strength consistent with the safety of the Indian " Empire in time of peace, while the troops in Great " Britain or in her Colonies serve as reserves to which " the Government of India looks for reinforcements of " troops in the case of any emergency; and it is only " through the existence of these available reserves that " Indian revenues are spared the vast expense that " would arise, were the troops in India always main- " tained at their maximum instead of their minimum " requirements. The maintenance, therefore, of these " available reserves forms, in Mr. Cardwell's opinion, " an important item in the actual disbursements out " of British revenues, for repayment of which Indian " revenues are directly liable; and, whatever may be " the strength or organisation of the British Army as " determined by Her Majesty's Government to be most " conducive to the maintenance of the constant " efficiency of the troops, the Government of India is " directly interested in the keeping up of that strength " and that organisation, as involving the question, so " important to that Government, whether the reserves " on which it depends for the immediate conversion of " the peace establishment in India to a war establish- " ment in case of emergency, are at all times available " to be drawn upon at any, the shortest, notice. " Moreover, Mr. Cardwell is unable to overlook the " fact that, in providing British troops for service in " India, the civil population of this country is called " upon to give to the army a number of men which " represents a very considerable portion of the numbers " available for military service; and to that extent " India competes at all times with this country in " obtaining from the civil population the number of " recruits required for the military forces of the " Crown, adding to the difficulty, and consequently " to the cost, of raising each individual recruit. " Mr. Cardwell is, therefore, of opinion that Indian " revenues are justly liable to bear, in the widest " sense of the term, their full proportion of the cost " of the reserves of effective soldiers maintained in " this country, as well as their proportion of the cost " of the whole machinery for drawing recruits from " the civil population, and of training them for " efficient service abroad by whatever organisation " or system may be adopted by Her Majesty's Govern- " ment as being most conducive to the strength and " efficiency of the British Army." Indian financial considerations were not overlooked by the War Office; and Mr. Cardwell was unable to concede "that the " charges for British recruits sent to India are " extravagant or unfair in their demand upon Indian " revenues. The expenses disbursed on recruits for " India are subjected to the same minute and un- " varying control as are those incurred for the recruits " for home and colonial service, and in no way could " Mr. Cardwell consent to a diminution of the charges, " founded as they are on ascertained expenditure, " without unfairly throwing upon British revenues " expenses incurred solely for Indian purposes." As indirect charges of which India is relieved, Mr. Card- well cited "the cost of the military staff and head- " quarter departments at home; the regimental staff " of the corps to which the Indian depôts are attached " or affiliated; the full assessed cost of raising and " training the soldiers who proceed, not as drafts or " recruits, but as relieving corps, allowing to India for " such efficient men as return with relieved corps; " the full cost of the educational establishments for " officers and for men; the costs of experiments in " arms and ammunition; the cost of rewards to " inventors of military weapons or machines; and, in " every case in which India calls for an augmentation " of the number of what may be termed the profes- " sional branches or departments, such as Artillery, " Engineers, and Medical Officers, such sums as may " be determined on as representing the cost that has " been incurred by British revenues to prepare such " professional officers for the efficient discharge of " their duties."

Appendix 4th Report of Select Committee on East India Finance, p. 249.

50. This letter was answered by the India Office on the 9th of August 1872, pointing out that the depôt organisation was not defended by the War Office as necessary for the efficient training of recruits, nor was any objection, so far as the efficiency of training is concerned, taken to the cheaper system suggested. The charges made against India for recruiting were, indeed, defended, "but upon the ground that they are " required for a totally different purpose—the pur- " pose, namely, of making India contribute towards " what is called an army of reserve; that is to say, " for the purpose of making India pay towards the " cost of the home garrison of England, on the plea " that some part of it, at some future time, may " possibly be required in India." It was not easy to see why the contributions that, in Mr. Cardwell's opinion, India might be required to pay, should stop at those enumerated by the War Office. "A share of " the cost of every home establishment or institution, " of whatever kind, to which the Indian Government " affords custom or employment, or which has any " contact, direct or indirect, with the administration " of that country, might be claimed upon the same " principle and under the same plea. If India, besides " defraying the whole cost of the India Office, as it " now does, is to be required to pay also largely to the " cost of the establishment of the Horse Guards and " of the War Office, the principle on which this claim " is made would not stop with the demands of the " 'War Department.' In like manner, the Navy may " possibly be required in the defence of India; there- " fore, the revenues of that country ought to defray " part of the expenses of the Department of the " Admiralty, of all the naval arsenals, of all the naval " stations, and probably also of all the Mediterranean " garrisons. . . . . The problems of Indian finance " are difficult enough already; but they will be " rendered infinitely more difficult if the Indian " Government is to be kept in complete uncertainty " as to the extent to which 'indirect claims' are to be " raised for Imperial subventions. The Secretary of " State for India in Council, therefore, cannot allow " the principle of such claims to be laid down . . . . " without entering against it his formal protest; the " principle is certainly a new one; he believes it to " be illegal, and he is satisfied that it is unjust."

51. The Secretary of State for India regarded the assertion that it is the policy of the Government of India to "maintain the smallest possible amount of " European troops in that country, to rely habitually " on reinforcements from the army at home, and thus " practically to lean upon that army as an army of " reserve," "as not only incorrect, but as completely " inverting the real facts of the case. It would be " much nearer the truth to affirm that the Imperial " Government keeps in India and quarters upon the " revenues of that country, as large a portion of its " army as it thinks can possibly be required to " maintain its own dominion there; that it habitually " treats that portion of the army as a reserve force " available for Imperial purposes; that it has uni- " formly detached European regiments from the " garrison of India to take part in Imperial wars " whenever it has been found necessary or convenient " to do so; and, more than this, that it has drawn not " less freely upon the Native Army of India, towards " the maintenance of which it contributes nothing, to " aid it in contests outside of India, and with which " the Indian Government has had little or no concern. " The extraordinary case of the great mutiny of " 1857–58 is the only case which gives even plausi- " bility to the" War Office representation; "in that " case, altogether unprecedented in the history of " British India, the Imperial Government was com- " pelled, under the imminent risk of losing its " Empire in the East, to make one of those great " efforts which are at times inseparable from Imperial " power and Imperial obligations. It must be remem- " bered, however, that, if similar exertions had been " called for by war in any other part of Her Majesty's " dominions, not only must the same effort have been " made, but the burden of it must necessarily have " been borne, in great part at least, by the Imperial

"Government; but, in regard to the Indian Mutiny, "no part of the cost of suppressing it was allowed to "fall on the Imperial Exchequer; the whole of it was, "or is now being defrayed by the Indian taxpayer. "Since the period of the Mutiny, the Imperial "Government has largely increased the portion of its "army which it keeps in and at the expense of India; "and both before and since that event it has been in "the habit of drawing upon that portion of its army "as an army of reserve for Imperial wars whenever "occasion required." The instances were mentioned of the expeditions to Egypt in 1801, and to Mauritius and Java in 1810 and 1811. In "the last 30 years, "there have been only two occasions, besides the "Mutiny, on which reinforcements were sent for "Indian wars, whilst during the same period there "have been no less than seven different occasions "on which India has been called upon to supply "either whole armies or considerable reinforcements "for the Imperial purposes." India has borrowed from England four regiments for the Sutlej campaign of 1846, and five for the Punjab campaign of 1848, while England had borrowed from India the China expeditionary force in 1842, four regiments for the Crimea in 1855, the Persian Expedition of 1856–57, a large force for China in 1859–60, two regiments for New Zealand in 1860, and another in 1861, and the main body of the army for the invasion of Abyssinia, in 1867. "It is certain that all these wars were "dictated entirely by the Imperial Government, and "that the interests of British commerce, the grievances "of British merchants, or the honour of the British "Crown, were the determining considerations in "them all. The policy of charging the Persian War "in largest proportion to Indian revenues was severely "commented on in Parliament, and led to a statutory "enactment limiting such uses of Indian revenues for "the future." As to the argument that India, as a part of the Empire, had its own share of interest in these wars, it was replied that "community of interests "within certain interests may fairly be alleged; but "it must not be alleged only when it tells in favour "of the Imperial Exchequer, and repudiated when it "tells in favour of the Indian taxpayer." "In every "instance in which reinforcements from home have "been sent to India, the whole pay of the troops so "sent has been charged to India, from the moment of "their departure from the shores of England. On the "other hand, when India has been called on to provide "troops for foreign expeditions, it has been the "general practice to continue to charge the ordinary "pay of the troops to the Indian Exchequer during "their absence from India," as in the very last case, the Abyssinian War. "The Imperial Government has "habitually assumed, not merely that India should "furnish an army of reserve, but also that India "should furnish the pay of that reserve, even when "serving out of India, and when, therefore, it was "useless to the Government of that country."

52. As to the argument that India competes with the Imperial Government in the recruiting market, "even if India is to be considered in no other light "than as the cause of an increase in the total cost of "troops, India pays its full share of that total cost "when it pays for those troops in the proportion in "which it actually recruits and actually employs them. "But . . . all arguments which imply that India "is nothing but a burden and a cause of embarrass-"ment in military affairs, are arguments inconsistent "with many notorious facts—with the anxiety of "officers to secure Indian employment, and with the "advantages which Indian exigencies afford in the "way of augmentations and promotions in the Army. "It is well known that India offers the best, if not "indeed the only training ground for the British "Army in time of European peace; that, as Indian "pay and allowances are much higher than those "given to the army either at home or when employed "elsewhere abroad; Indian service is highly popular in "the Army; and that, in consequence of the liberal "treatment which up to the present time the Govern-"ment of that country has been enabled to bestow "upon the officers and men, it has contributed one "great inducement to numbers of both classes to "enter the British Army; and, moreover, that, under "the new Army organisation by which Her Majesty's "Government hope to augment the military power of "the country, and to save the expense of pensions by "the introduction of a short service system and the "establishment of a reserve, a very large, and certainly "not the least valuable portion of that reserve will "consist of men whose entire military training and "experience will have been acquired at the expense of "the people of India."

53. By Act of Parliament Indian revenues are to be expended "for the purposes of the Government of "India alone." "In the application of this principle "to particular cases of charge, there is room, no doubt, "for a reasonable latitude of interpretation; and this "latitude is largely made use of when, for example, "such a position as that of Aden is maintained at the "sole expense of the people of India. But, allowing "for such latitude of interpretation, the general scope "and import of the principle seem sufficiently "apparent, namely, that India cannot be justly "charged with any expenditure which would have to "be maintained if the Indian Empire did not exist. "The word 'alone' negatives the application of the "revenues of India to any such mixed purposes, and it is "deprived of all force and effect if the Indian revenues "may be applied to such expenditure." . . . "As "regards the novelty of the charges referred to," in the War Office letter, "it is enough to say that the "Imperial Government has supplied India with "recruits and soldiers for nearly a century; but, "during the whole of that time, notwithstanding the "comprehensive words used in the Acts of Parliament "directing payment of the expenses incurred for "'raising, transporting and maintaining such forces,' "and 'raising and supplying recruits for the same,' "and appropriating the revenues of India to defray "'all the charges and expenses of raising and main-"'taining the forces,' 'as well European as Native,' "no attempt has ever been made until now to render "the Indian finances liable to such charges. . . . "The Secretary of State for India does not contest the "necessity of India paying for its recruits under what-"ever system is determined upon at home as necessary "for the efficiency of military training; and, if the "present expenditure be defended on this ground, "the Secretary of State for India can only represent "his views on possible economies in the system, in "order that these representations may be considered "by the Secretary of State for War. But, if the cost "of recruiting be swollen by artificial system of charge, "so as to include outlays which have really nothing to "do with the cost of training, but are connected "entirely with the organisation of the home garrison "of England, he must record, as he now does, his "protest against the principle involved, namely, that "of charging India with any outlay which cannot "fairly be said to be occasioned by the service of India."

54. In a letter dated the 15th of May 1873, No. 94 (Military), the Government of India (under Lord Northbrook) commented on the first three reports of Mr. Seccombe's Committee. "The charges made by "the Secretary of State for War against this country "for recruits" (136*l.* 13*s.* 11*d.* for cavalry, 63*l.* 8*s.* 5*d.* for infantry, 78*l.* 14*s.* 8*d.* for Royal Horse Artillery, 59*l.* 2*s.* 10*d.* for Royal Artillery, mounted, and 58*l.* 9*s.* 3*d.* for Royal Artillery) "are so out of proportion to the "expense incurred under the East India Company" (average for 10 years ending 1859 for all arms 19*l.* 14*s.* 10¼*d.*) "that the difference is clearly not "mainly attributable to the enhanced pay and allow-"ances of the soldier, to his more perfect training, or "to the increased cost of his equipment, but to the "altered system under which regiments are recruited, "and to the manner in which the cost of troops "stationed in the United Kingdom is apportioned to "India." . . . "It is assumed that the sums "reclaimed by the War Office from this country "should only comprise the expenditure entailed on "Imperial funds for raising and equipping troops "for India, and that the contributions levied on this "account should not be based on the cost entailed by "the distribution of troops at home, when that distri-"bution is made for Imperial purposes, and is not "necessarily involved in the provision of troops for "India." Warley and the Guards afforded illustrations of "the minimum establishment requisite for the "provision of recruits. . . . When establishments "are maintained, not only for recruiting, but also for "the fulfilment of other duties, it is evident that, if "the whole expense be charged to recruiting, the cost "of the recruit is unduly enhanced, while the cost of "the other services is unduly diminished; and, when "the former charges fall on one Government and the "latter on another, it is clear that the incidence of "the charge is unequally divided. Under the system of "depôt battalions, and subsequently of affiliated depôts, "which existed until the establishment of the depôt

Appendix to 4th Report of Select Committee on East India Finance, p. 255.

" centre system, the depôts, though nominally " maintained solely for recruiting purposes, were " available for, and actually performed other general " duties. . . . Now that the whole depôt system " of the army at home is undergoing revision, and the " nature and extent of the various duties assigned to " depôt centres have been clearly specified, it would " seem a convenient time to re-consider the charges " made against this country for the depôts retained in " England of regiments serving in India, and to " re-adjust charges which, in our opinion, are out of " proportion to the service for which they are paid." In the Report of the Committee on the "organisation " of the various military land forces of the country," " the duties to be performed at the depôt are thus " stated:—(1) Training of recruits both for the line and " the militia; (2) Training of infantry militia; (3) Train- " ing of rifle volunteer corps; (4) Registry, payment, " and training of army reserve and enrolled pensioners; " (5) Recruiting; (6) Care of arms and stores of " regular and auxiliary forces; (7) Military instruction " to officers of auxiliary forces These duties. . . . " are of a very varied character, and chiefly for " purposes foreign to Indian services; and we consider " that only that portion of the establishment which is " necessary for the raising and drilling of recruits for " India should be charged to India. It cannot now be " maintained that the depôts of Indian regiments are " retained exclusively for Indian purposes, or that the " Imperial Government, deriving no advantage from " their presence and duties at home, should bear no " portion of their cost; and it seems very desirable " that the question should be finally settled as to what " portion of the expense of the depôt establishments " under the new system may fairly be assigned to home " service generally, and what portion to recruiting " purposes alone." After commenting in detail on various points in which the charge seemed too high, such as the number of months supposed necessary for training, the much larger proportion of the soldier's service which relatively the British Government received under the system of short service and reserve, and the heavy addition made for desertion, the Government of India recommended: "(1) That the charge for " the Home depôts of regiments serving in India should " be divided into two parts, the one representing the " value of the presence of such troops at home, and of " the general service rendered by them," which should be borne by Imperial revenues, "the other representing the " value of the labour of raising and training recruits " for the battalions in India," which might be fairly charged to India. "(2) That the charge for the cost of " training the infantry recruit should be limited to " three months, during which he remains at the " depôt." They further maintained the right of India, under the new system, to receive credit for all soldiers returned for service with the colours or in the reserve, not excluding, as hitherto, all who had less than two years to serve.

Appendix to 4th Report of Select Committee on East India Finance, p. 253.

55. This letter was forwarded to the War Office on the 14th of April 1874, with special reference to the charge for the depôts, the period of training on which the charge for recruits was based, and the exclusion of credits for men returned with less than two years' service; and Lord Salisbury urged that the Committee on Effective Charges should be instructed to ascertain the value respectively of the service of raising and training recruits for India, of the other general services of the depôt, and of the presence of the troops in this country, and that the charge for each recruit should be based on a three months' training. Or, if it should be thought better, he suggested a reference of the dispute to some impartial arbitrator.

4th Report, 1874.

56. The correspondence was referred to the Select Committee of the House of Commons on East India Finance, who, "in addition to some of the principal " permanent officials of both Departments," examined " His Royal Highness the Field Marshal Commanding- " in-Chief; the late Secretary of State for War, " Viscount Cardwell; the present Secretary of State " for India, the Marquis of Salisbury; and other high " authorities," including Lord Sandhurst. The Committee said that they had "received an impression " from these sources, that charges have in some in- " stances been imposed on India which ought to have " been borne by England. Your Committee have, " however, been assured by various witnesses that a " very general desire prevails among the different " English departments not to throw any charge upon " India improperly. Your Committee cannot too " strongly insist on the importance of securing for " India strict impartiality in all her financial arrange- " ments with this country; and they agree in the " opinion which was very emphatically expressed by " the Marquis of Salisbury, that the most effectual " way of securing financial justice for India is for " the House of Commons to be constantly watchful on " her behalf. Your Committee cannot lay down too " strongly the position that the English estimates " ought not to be relieved at the expense of the Indian " revenues; but that the Secretary of State in Council " has the constitutional right of refusing to pay for " objects in which he considers that India has no " interest. At the same time, India, as a component " part of the Empire, must be prepared to share in the " cost of a system the expense of which may be " enhanced for Imperial purposes." The Committee proceeded to mention that Mr. Bouverie had consented to preside over the departmental Committee on Army Effective Charges, and they hoped that a satisfactory settlement would be the result; and they recommended that, after careful inquiry into the points needing investigation, the payments by India should as far as possible take "the form of fixed rates for particular charges."

Letter from India, 22nd Sept. 1874, No. 406 F.

57. On receiving a copy of this Report, the Government of India sent a letter in which they observed: " Viscount Cardwell and other high authorities con- " nected with the administration of the British Army " have frankly admitted in their evidence, that India " has for a considerable time been called upon to pay " at an unnecessarily high rate on account of some of " the charges connected with Her Majesty's forces " serving in the East Indies. We trust that the burden " which has thus been imposed upon the finances of " India may at least be taken into consideration in " abatement of the payment which might otherwise " be fixed on account of these charges for the future." With reference to the opinion of the Select Committee that India must share the cost of a system the expense of which might be enhanced for Imperial purposes, the Government of India forwarded a minute by the Viceroy.

58. In that minute Lord Northbrook pointed out that Lord Cardwell's evidence before the Select Committee showed that he had admitted "that the cost of " providing recruits for India is susceptible of great " reduction;" "that the rates now paid by India " should be reconsidered in connexion with the establish- " ment of the new depôt system for the Army;" "that " only a part of the staff and establishment of a " brigade depôt is required for recruiting and training " soldiers for the Army;" "that the tendency is for " the cost of recruits to increase, and for the duration " of Indian service to diminish;" "that the present " arrangement under which India receives no credit " for soldiers who return home with less than two " years to serve, should be reconsidered;" "that only " the value of the labour of raising and training re- " cruits for the battalions in India" should "be " charged to India;" "that the calculation should " be based on the principle that the revenues of India " can only be applied to services rendered to India; " and that no portion of those revenues should be " indirectly applied to the cost of the defences of Great " Britain." It had not been intended to imply that the cost of raising recruits could now be reduced to the Warley rate; but "that, after making every allowance " for the deficiencies of Warley, the present rate is " excessive." Lord Cardwell said that, before a battalion goes to India, it has to be raised from 520 to 820 entirely at the expense of the English taxpayer; but, " when the regiment embarks from England for Indian " service, India pays at a fixed rate for every soldier " embarked . . . The English taxpayer is put to " no real charge on account of the strength of the " battalion having been raised. The most that can be " said . . . is that, supposing the cost to England " for maintaining the extra men is not altogether re- " couped by the payment made by India when they " embark, it may be a question for consideration " whether the presence of the men at the disposal of " England before they embark is a sufficient set-off." On the question "whether India ought to bear a share " in the cost of the general, medical, and commissariat " staffs," Lord Northbrook did "not know that any " part of them could be reduced, if the whole of the " recruits for India were to be raised separately from the " general administration and command of the army."

It could not be admitted as a new charge any more than "the staff charges of the battalions to which at "one time Indian depôts were affiliated," which Lord "Cardwell did not think it right to charge against "India as they were already in the estimates. If "indirect claims were raised, "consideration should "be given to the advantage which England derives "from being able to employ the Native Army of India "for such service as the wars in China and Abyssinia." Lord Cardwell argued that, "in time of "need, the cadres of battalions, whether in England "or India, are raised to a greater strength of men "from the army and militia reserves, which are paid "for by England," and that India "is interested in "the maintenance of this 'expansive' system which "supplies an effective reserve, and India should, "therefore, pay a proportion of its cost." But Lord Northbrook replied that, however economical and desirable the system might be for England, India did not share in all its advantages; "the assistance which "India will receive when she requires it may be more "prompt than before, but she will not obtain it without additional charge. She will pay, for every "soldier sent with drafts to India, and for every soldier "in corps sent out to India, a sum calculated at the "cost of raising and training a recruit. Therefore, "she will pay England for every man sent her from "the reserve the expense of his recruiting and training, and, if he has served in India before, she willpay "this cost twice over, except when she has a drawback; but the balance will, I believe, always be "against India. We are asked, then, . . . to pay "a part of the cost of a system which, although more "efficient, will probably be more economical than the "old one, and for part of the cost of an article which "we may never use, but for which, if we use it, we "shall have to pay the full price."

Parliamentary Paper, 14 of 1878, p. 32.

59. Mr. Bouverie's Committee reported on the 1st of June 1875: "They have thought it best, in view "of the new military organisation of brigade depôts "at home, to endeavour, with regard to infantry of the "line, to separate the charge for establishments at "home engaged in training Her Majesty's forces, "generally, from the personal expense attendant on "the training of each soldier despatched to India. "They are advised, by competent authority, that the "cost of the depôt of a battalion abroad (which depôt "is an integral part of the brigade depôt at home) "may fairly be taken at one-fifth of the whole cost of "the brigade depôt. The entire cost of each brigade "depôt, excluding the non-effective charges for half-pay and pension accruing thereon, . . . may be "taken at 9,125*l.* per annum, or 25*l.* per diem. One-"fifth of this amount, or 5*l.* per diem, for each of "the 50 brigade depôts having an Indian depôt "attached, will therefore be the establishment charge "which the Indian revenues will have to repay. "Further, the sum of 22*l.* 10*s.* will be paid by "Indian revenues for every trained soldier of infantry, whether sent in periodical drafts or in "battalions. This payment will represent the cost "of a trained recruit, other than that portion due to "the training establishment or brigade depôt. No "soldier should be sent with his battalion who has "not at least two years of unexpired service under "his existing engagement; and, for any soldier going "out with a draft who has served less than three "months, the payment will not be the full sum of "22*l.* 10*s.*, but at the rate of 3*s.* for each day he has "been in the service. As it is evident that, on a "battalion returning from India, the unexpired service "of the men will, on an average, be much less than "the average unexpired service of men going out with "the battalions, Indian revenues will be repaid, not "the full charge of 22*l.* 10*s.* a man, but two-thirds "of that sum, viz., 15*l.*, for each effective soldier who "returns with his battalion to this country, provided "he is not, at the date of disembarkation, within six "months of the expiration of his existing engagement "to serve with the colours. If, however, any soldier "returning from India (whether with his battalion or "on account of the expiration of his term of service "with the colours), for whom such repayment of 15*l.* "has not been made, shall be transferred to the reserve, "Indian revenues will be repaid the sum of 7*l.* 10*s.* for "each soldier; the Committee have considered two "years' service in the reserve as fairly equivalent, for "the purposes of this calculation, to one year's service "with the colours. These arrangements will take "effect . . . from the 1st of April 1873," the charges for 1872-73 being adjusted on the same principles as those for the two previous years.

60. "The actual cost of invalids sent home and "treated in Netley Hospital will be repaid by Indian "revenues," such charges in ordinary cases not extending for more than six months from the date of landing. "The Cavalry Depôt at Canterbury being, "with the exception of the riding establishment, maintained exclusively for Indian purposes, the actual "expenses of the depôts of Indian regiments and depôt "staff, the expenses of repairs of buildings will be "repaid by Indian revenues, and also one-fourth of the "expense of the Cavalry Riding Establishment. Indian "revenues will be debited with the sum of 51*l.* . . . "for each cavalry soldier embarked with a regiment "for India, and will be entitled to a credit" (as in the infantry) "of two-thirds of that sum, or 36*l.* for each "cavalry soldier returning with his regiment, or of "one-fifth, or 10*l.* 16*s.*, for each soldier returning who "may join the reserve. These arrangements to take "effect as from the 1st April 1874."

61. For the artillery, the Committee adopted, in respect of the years 1872-73, 1873-74, and 1874-75, the rates of Mr. Seccombe's Committee mentioned above in paragraph 47. "From the 1st April 1875, and so long "as the artillery force in India and the Depôt Establishment remain at their present strength, India "will contribute 64,000*l.* per annum in aid of the "expenses of the depôts of the Royal Horse Artillery, "Royal Artillery, and Riding Establishment, being "the proportion due to the number of brigades and "batteries on the Indian Establishment. For men of "the Royal Artillery embarked for India, whether in "drafts or in brigades or batteries, the Committee" fixed, "for personal expenses, only two rates, viz., for "Royal Horse Artillery, on the basis of a minimum "period of nine months' training," 57*l.* 5*s.* 8*d.*, "and "for Field and Garrison Artillery, on the basis of six "months," 26*l.* 16*s.* 4*d.* "for each man embarked," India being entitled to credit of two-thirds or one-fifth of these amounts respectively, "for each artillery soldier "disembarked in this country."

62. India was also to "be liable to a further charge, "as a percentage on the personal expenses, on account "of desertions, calculated for each arm on the annual "number of men deserting at home during the first "nine months from the date of their enlistment."

63. For Royal Engineers the rates fixed in 1867 were to remain in force. Towards the expenses of the Educational Establishments (except the Royal Military College, which remained for subsequent settlement) "Indian revenues should contribute a lump sum of "20,000*l.* per annum, ... commencing on the "1st April 1870. In addition to the above sum, India "will be chargeable with the pay and allowances, for "the period of instruction at Chatham and Shoeburyness, of the officers sent out to India to maintain or "to increase the establishment of the Royal Artillery "and Royal Engineers," the charge for each engineer officer being "350*l.*, so long as the present period of "training is continued."

64. "The representatives of the India Office" having "repeatedly urged objections to the extent of the "existing establishments in this country, as being "larger and more costly than is necessary for the "supply of trained men from India," the Committee suggested "that two or more military officers, selected "to represent the Horse Guards and the India Office, "should inspect the Cavalry Depôt at Canterbury and "the Depôt Brigade of the Royal Artillery, with the "view of reporting whether it might not be practicable, "with due regard to efficiency and to the maintenance "of the existing system, to reduce the cost of the "establishments necessary to maintain the effective "strength of Her Majesty's Cavalry and Artillery "forces in India."

65. The Committee concluded by saying that they had "taken only into account those charges and those "set-offs which seemed fairly to admit of a definite "statement of pecuniary value. The value to this "country, for military purposes, of the presence of "recruits destined for India, and of the establishments "here, or portions of them, engaged in work for "India, on the one hand, and, on the other hand, the "value to India of the machine of our military administration, coupled with the possible value to India "of our reserves, does not appear to the Committee "to be capable of pecuniary valuation, or to admit of "anything like an exact financial adjustment, be-"tween the two Treasuries. To weigh these relative

" considerations, when such general questions arise, as " affecting the Imperial finances or the burdens on the " Indian taxpayer, is the business of statesmen and not " of accountants; and the duty, as well as the respon- " sibility, of arriving at a just conclusion upon them " must at all such times rest upon Her Majesty's " Government."

66. In the following statement the rates are compared which were recommended by Mr. Seccombe's and by Mr. Bouverie's Committees respectively:— Note by Mr. Seccombe, 31st Jan. 1877.

	Average Effective Strength of Officers and Men in India, 1870-71 to 1875-76.	Amount payable.		Average Rate per Man.	
		Mr. Seccombe.	Mr. Bouverie.	Mr. Seccombe.	Mr. Bouverie.
		£	£	£ s. d.	£ s. d.
Cavalry	4,260	35,489	57,388	8 6 7	13 9 5
Artillery Depôts	—	—	64,000	—	5 7 0
Horse Artillery	2,549	20,304	18,818	8 0 0	*12 14 8
Field and Garrison Artillery	9,411	52,223	28,308	5 11 0	*8 7 2
Infantry	45,089	175,519	188,846	3 17 10	4 3 9
Total	61,309	283,535	357,360	4 12 6	5 16 7
				Per man of all arms.	

* With proportion of charge for depôt.

Despatch to India 9th Sept. 1875, No. 454 F. Letter from India, 10th March 1876. No. 63 M.

67. The report of Mr. Bouverie's Committee, having been forwarded to the Government of India, they replied in a despatch stating that many of the charges therein specified could not be accepted as equitable without further information. With reference to the reduction in the capitation rate if infantry soldiers were sent out with drafts, having less than three months' training, they observed "that, if any soldier is sent to " India, whether with his regiment or with a draft, " with less than his full training of six months for " which India is charged, a proportionate reduction " should be made in the capitation charges." As to the repayment for effective soldiers sent home, and those passing into the reserve, the Government of India remarked that, "while India will have paid all the " personal expenses of a trained soldier, and all " charges due on account of the raising and training " establishments employed, she will get a drawback " of only two-thirds and one-third of the bare capi- " tation rate. When battalions are sent to India, no " reduction is made in the capitation charge against " India on account of men who have already given " several years' service to England, and who have con- " sequently only a few years' service with the colours to " give to India; but, when the position of affairs is " reversed, and battalions return home with men in the " ranks who have served India for a short time only, " perhaps for a couple of years, and have still several " years of service to give to England, either under the " colours or with the reserve, a large reduction is " made in the capitation charge to be refunded to the " Indian Government. . . . As we understand the " arrangement, India may pay 22*l.* 10*s.*, or the full " cost of training for six months a soldier who has " had nine years' service out of India. The soldier " might serve only two-and-a-half years in India; but " India would only receive a drawback of 7*l.* 10*s.* on " his account, and would again pay 22*l.* 10*s.* if he " should return to India as a reserve man." For the brigade depôts "the share of India should be calculated " upon existing and not upon complete establish- " ments." "The calculations respecting deserters in " the infantry should be confined to six months." As to the cavalry, it should be ascertained "whether the " depôt staff and the depôts are utilised in any way " in carrying on duties in connexion with the riding " establishment." In the case of the artillery, India " was to be made to "pay twice over for the keep of " the horse of every Royal Horse artilleryman sent to " India with a draft. . . . One horse should suffice " to train two men, and . . . the charge for forage " in the capitation rate should be reduced from " 16*l.* 13*s.* 8*d.* to 8*l.* 6*s.* 10*d.*" The charge for the feed of the battery horses, and that for cast horses, should be withdrawn. "The two horse batteries of the depôt " brigade form a very substantial addition to the " military force in England; and it is proposed to " charge India with the cost of a larger part of their " establishments than is wanted for recruiting and " training purposes. The whole question of the pro- " priety of India paying for the cadre of the depôt " batteries should be carefully re-considered upon " . . . general principles." In the garrison bat- " teries also, "the establishments, and consequently " the charges are unnecessarily large for the work of " keeping the garrison batteries in India complete " with trained gunners."

68. In Lord Northbrook's Minute of 1874, reference had been "made to the advantage derived by England, " in being able at any time to call on India for troops " for such services as the wars in China and Abyssinia. " The despatch of troops from Calcutta to Penang at " the end of the last year affords another instance of " India having placed at the disposal of Her Majesty's " Government a force of British and Native troops " belonging to Indian establishments and receiving " pay from Indian revenues. The principle which was " adopted in the case of the troops on the Indian " establishment sent to Abyssinia, namely, that their " ordinary pay should be defrayed from Indian " revenues, and only the extra charges of the expe- " dition should be paid by the Imperial Government, " was the subject of a strong protest at the time by the " Government of India. The same principle is pro- " posed to be applied to the force which was recently " sent to Penang. It has been admitted, so far as we " understand the argument, that these expeditions " were despatched not for Indian, but for Imperial " purposes; and the reason given for charging India " with any portion of their cost was that it would not " be right that India should make any gain by the " service which troops upon her establishment rendered " to the Imperial Government. If this principle is to be " adopted in these cases, we submit that in equity it " should be applied to the Home charges of British " troops sent to India. We cannot but believe that " there are many charges now made against Indian " revenues which undoubtedly would be incurred by " the Imperial Government if the recruiting of the " Army in India was otherwise provided for, and we " trust that the whole question may be reviewed com- " prehensively on these principles."

69. In the discussion of the question of introducing the short service system, the War Office, in a letter dated the 14th of February 1876, advocated the grant of deferred pay, as "Mr. Hardy is satisfied that, without " some such direct additional inducement to men to " enter the army, it will not be possible for the future " to meet the heavy demands which are entailed upon " the recruiting classes in this country from the large " force necessarily maintained in India and elsewhere " throughout Her Majesty's dominions, the service in " India being, as is well known, that from which " results the heaviest wear and tear in the numbers of " the army." It was estimated that "the normal " cost" chargeable to Imperial revenues would "be " about 325,000*l.*, which will probably be reached " about the year 1890," and that the amount falling upon Indian revenues would be about 51 per cent. of the sum payable by the British Government. *See enclosures to Despatch to India, 13th July 1876, No. 180 M.*

70. Lord Salisbury, in replying on the 21st of March, noticed the statement in this letter "with some surprise." So far as he was informed, he could "not " admit that the difficulties now apparently expe-

"rienced or apprehended in obtaining recruits in "sufficient number for the British Army arise in any "special manner from the demands for India. He "considers, looking at the history of our army "organisation during the last few years, that these "difficulties may, to a very great extent, be reasonably "attributed to the many and very important changes "that have been recently introduced in that "organisation. . . . . His Lordship has for some "time past viewed with serious apprehensions the too "probable effect of the recent changes in our army "system, not only as bearing upon the military "expenditure of India, but as calculated to impair the "efficiency of the British portion of the army in that "country." The following summary of recent changes, and the estimated cost to India, was given:—

	£
"Increase of 2*d.* a day to British troops, and an additional 1*d.* on re-engagement, September 1867	250,000
"Revised rates of pay of British soldier, May 1874	64,000
"Grant of good conduct pay at earlier periods, and withdrawal of additional pay of 1*d.* a day on re-engagement, June 1870	Not ascertained.
"Introduction of system of garrison instruction, July 1870	31,500
"Cost of undertaking provision of soldiers' necessaries, 1863	Not ascertained.
"Re-organisation of medical staff in 1866 (August 1866)	57,000
"Re-distribution of ranks of British medical officers in 1873	113,000
"Increased pay of quartermasters and paymasters of British regiments, August 1868	15,000
"Pay of regimental majors of artillery and engineers, July 1874	35,000
"Total	£565,500

"To these will now have to be added the cost of the "present increase of pay to non-commissioned officers "and men, upwards of 200,000*l.*, a cost likely to be "enhanced by the necessity of remitting the greater "portion to England from India; and Mr. Hardy will "observe that, while service in India has for many "years offered to all grades of the British service "special attractions in the shape of higher pay and "allowances, or special privileges, than those granted "to similar ranks in other parts of Her Majesty's "dominions, it has been found in all cases difficult, "and in most cases impossible, to withhold in that "country the often large additional advantages intro-"duced into the service at home and in the Colonies, "although such advantages might be in the first "instance sanctioned ostensibly without necessary "application to India." Whatever the ultimate advantage of the short service system to England, in avoiding the burden of pensions, it would add enormously to the cost of transport between England and India, the increase on which was "estimated at not "less than 150,000*l.* per annum upon the infantry "alone." The efficiency of the British Force in India would be greatly impaired, by the withdrawal of the finest material for the reserve force in England. "Neither is it reasonable, under such circumstances, "that the constitution and maintenance of such a "reserve, which would never have been devised but "for considerations of purely European policy, should "entail so large an annual charge upon India as is "obviously unavoidable if the short service system "is to be allowed to operate in that country, more "especially when it is considered that, in addition to "such permanent charge for that purpose, India would "be charged with the entire cost of any portion of the "reserve force that might, under some remote though "possible contingency, be called upon as a reinforce-"ment in the event of extended military operations "in that country." Lord Salisbury suggested that re-engagement for service in India should be encouraged, or special battalions be detailed for a long tour of duty in India, to which men willing to serve abroad might be attached with the hope of ultimate pension.

71. Lord Cadogan's Committee, in recommending the short-service system, urged that there would be "a "saving on invaliding and pensions, which, under "a system of shortened service in India, would be "materially reduced; and the married establishment "would be considerably reduced." The Committee found that, if men were re-engaged "to prolong their "residence in India for a longer period than eight "years," they "are in a large proportion invalided "home before the expiration of their extended term, "and become a burden to the country. The bounty "paid to them on re-engagement is wasted; and their "services are lost, both to the Indian Government, at "whose charge they are invalided and pensioned, and "to the Reserve at home."

72. The opinion of the Government of India having been requested on the system proposed, they forwarded a minute by Sir Henry Norman, in which they concurred, urging that soldiers should not be sent to India before the age of 21, and that, in view of the "enormous "addition to our military expenditure" which short service would entail, arrangements should be made for keeping the men, if possible, up to the age of 32.

Letter from India, 6th Nov. 1876, No. 361 M

73. In forwarding the correspondence to the War Office, Lord Salisbury observed that "there is a limit "beyond which the Government of India cannot go "in military expenditure; and his Lordship conceives "that to accept the proposals of Lord Cadogan's "Committee as they stand would be to go beyond "that limit." If compelled to accept them, he would be obliged to reduce the number of battalions in India by 10, increasing the 40 battalions remaining there to war strength. "The acceptance of the present weak "establishment of battalions by the Secretary of State "for India was a concession to Imperial military "requirements, entailing very great, and, as far as "India is concerned, uncalled for expenses upon the "finances of that country." He would, however, accept the view that "the term of eight years will "secure to India the most efficient service of the men, "while England will still obtain from them six years' "service in the Reserve, provided (1) that no soldier "be sent to India until he has been at least two or "three years in the army; and (2) that the Indian "Government should be empowered, with the consent "of the individual, to re-engage every soldier landed "in India for such period as would enable him to "complete a total service in India of eight years," subject to their not serving more than 12 years with the colours.

Letter to War Office, 3rd May 1877, No. 252 W.

74. While the War Office were still considering the subject, attention was forcibly drawn to the working of the system in India, by the condition of two battalions which, "on the eve of embarking for foreign service" in India, had been "denuded of a considerable propor-"tion of their staff sergeants, sergeants, and corporals, "who were left behind owing to their having a short "time to complete their service." The Government of India had in consequence been obliged to sanction extra pay for the acting non-commissioned officers; and Lord Cranbrook expressed his view "that the "double charge thus involved" could "not justly be "charged against the revenues of India."

Ditto, 28th May 1879, No. 276 W.

75. The War Office published a circular (189 of 1878) providing that men who had completed three years' service might extend their service to nine years, to be completed in India, receiving a gratuity of 2*l.* Under this it was anticipated that soldiers "enlisted for short service" would "give a service of at least five years in" India. The Secretary of State in Council learnt this decision "with extreme regret," considering the measures to be "altogether inadequate." Moreover, "the India Office proposals ensured an important "saving to the finances of India; the Army Circular "reduces that saving to a minimum." And the Secretary of State in Council placed on record his formal opinion "that the interests of India positively "require that no soldier shall embark for service in "that country of less than one year's service with the "colours, and that he should be allowed to re-engage "to complete eight years' service in India within a "maximum service of 12 years in all."

Letter from War Office, 10th April 1879.

Ditto, 5th July 1879, No. 365 W.

76. The recommendations of Mr. Bouverie's Committee were not accepted by the Secretary of State in Council "as a solution of the questions at issue"; but it was decided that the claims up to the 31st of March 1877 should be adjusted as that Committee proposed. This, however, did not close the accounts in dispute from 1870–71 onwards, for the India Office still objected to pay for soldiers of several years' standing, the much

Despatch to India, 26th April 1877, No. 138 F.

Parliamentary Paper.

heavier charge allowed for recruits; and, in view of the charges which were paid direct by the India Office, it was considered that a capitation rate of 6*l*. a man should be sufficient to cover those defrayed by the War Office.

14 of 2nd Sess. 1878, p. 14.

1st Report, 1877, Para. 127.

77. In the meantime, the delay in the settlement of these accounts had attracted the attention of the Committee on public accounts, who commented very strongly on certain irregularities, and said that "the "evils which have thus arisen are but the natural "results of the state of arrear into which these "accounts have fallen; and your Committee cannot "too strongly express their opinion that it is abso-"lutely necessary that an early agreement should be "come to, both as to the accounts for past years, and "also as to the basis of charge for the future."

Parliamentary Paper, 14 of 2nd Sess. 1878, p. 3.

78. In consequence of this Report, a Treasury Minute was recorded on the 2nd of July 1878, in which the Chancellor of the Exchequer expressed his concurrence with the Public Accounts Committee, and described the measure taken with the object of "adopting such a "principle of adjustment in future as would prevent "the recurrence of the protracted discussion and "fruitless negotiation attending adjustment upon "minute investigation of actual charges." The Treasury Board were "well aware of the difficulties which "are invariably encountered in the transaction of "business between the Imperial and the Indian "Governments. They are quasi-independent powers, "and there is no generally accepted definition of "Imperial as compared with Indian services; there is, "therefore, a disposition on the part of the authorities "on each side to advance claims which those on the "other side cannot accept, while no arbiter has been "provided whose decision between the conflicting "parties, must be final. The question at issue "requires, moreover, the most careful consideration "on the part of the Board, because there is an "impression in the public mind that the Imperial "Government demands too much from India. This "impression is justified or not, accordingly as the "theory of Imperial duty to India is extended or "contracted." After quoting at considerable length the Report of the Select Committee of the House of Commons in 1874, and the Chancellor of the Exchequer said that he "would be prepared to accept the defini-"tion of Imperial and Indian charges" therein laid down, as turning on the question whether India had an interest in them, "provided there were some satisfac-"tory method of deciding between the Imperial "Government and the Indian Government, in cases "where the former asserts, but the latter denies the "presence of an Indian interest. He agrees further "with the suggestion that the payments from India "should be as much as possible in the form of fixed "rates for particular charges, for the obvious purpose "of avoiding frequent re-opening of accounts," and, therefore, that it would be necessary to return to a capitation rate.

79. The Secretary of State for India had in August 1877 "proposed to the Cabinet that, in cases where "disputes may arise between India and some other "Department as to the charges to be made and "recovered, a committee of five members of the Privy "Council should be appointed to decide the matter, "their decision being regarded as final. This Com-"mittee was to be constituted as follows:—One member "to be nominated on the recommendation of the "Chancellor of the Exchequer; one on that of the "Secretary of State for India in Council; three, of "whom at least one should be a member of the Judicial "Committee, on the recommendation of the Lord "Chancellor. This proposal was circulated to the "various offices, and was assented to in principle by "all of them; but the Colonial Office asked that, in "cases where they are concerned, the Secretary of "State for the Colonies should nominate one member. "The Chancellor was led, on further consideration, to "doubt whether such a tribunal would be effective," and the matter was reconsidered, with the result that the sums "paid in past years into the Imperial Exche-"quer" were "taken in full discharge of the claims "of the Imperial upon the Indian Government, in "respect of the effective charges paid in England on "account of Her Majesty's troops serving in India," up to the 31st of March 1879, "the cost of stores, "arms, accoutrements, clothing, and the charges for "officers and non-commissioned officers of the Royal "Engineers" being "still settled in actual bills." This settlement was estimated to "involve a surrender by "the Imperial Government of a sum to which it could "establish its claim, varying from 100,000*l*. to 150,000*l*. "Looking at the condition of India at the present "moment, the Chancellor is prepared to defend a "settlement of account on this basis, although it "involves so large a concession to India."

80. As regards the future, the Finance Committee of the Council of India recommended a capitation rate of 6*l*. 10*s*. per man of all arms in India, for a term of 10 years. The Chancellor of the Exchequer was "somewhat averse to adopting a fixed rate per man "without some further inquiry;" and, accordingly, a Commission was to be appointed jointly by the India Office, War Office, and Treasury, "to fix the capitation "rate to be paid per man in future." Over the Commission the Earl of Northbrook presided, Sir Thomas Seccombe and Mr. Knox representing the India and War Offices respectively. The Commission was (1), "in "the first place," to "ascertain as nearly as possible "the amount of the *effective* charges incurred in this "country in respect of troops serving in India; (2) it "is to be understood that, for the re-imbursement to "the Imperial Exchequer of the expenditure incurred "on account of these charges, the principle of a "capitation rate has been accepted; (3) the Commis-"sion are asked to determine (*a*) what the rate should "be; (*b*) what basis should be taken for arriving at "the numbers on which the rate is to be payable; "(*c*) for how long the rate should continue in force "without revision."

Parliamentary Paper, 14 of 2nd Sess. 1878, page 25. Ditto, p. 1.

Treasury Minute, 19th Feb. 1879.

81. While this question was under consideration, the Government of India wrote a letter, dated the 8th of February 1878, stating their objections to the increasing charges of the War Office, and to a settlement of its claims on the principle of a rateable distribution of the military charge incurred by the Imperial Government, according to the number of men employed. "Such a state of things can hardly be described "otherwise than as intolerable. The difficulties and "uncertainties of Indian finance are . . . of a "nature to tax to the utmost the sagacity of the "responsible officers of our Government; but, when "charges so incalculable and so wholly beyond control "as those to which we have been referring may thus "be suddenly thrown upon the revenues, the most "careful and far-seeing must be liable to find their "efforts to secure a proper equilibrium of income and "charge defeated from no fault of their own. . . . "In our opinion, the burden now thrown upon India "on account of the British troops is excessive, and "beyond what an impartial judgment would assign, "considering the relative material wealth of the two "countries, and the mutual obligations that subsist "between them."

No. 66 F.

Para. 13.

82. "Admitting, as we most readily do, that India owes to England its present general prosperity, and the prolonged period of complete peace and orderly government to which that prosperity is due, yet it is not less certain that England on its part has derived many great advantages from the connexion with India which it has assumed; and, among these advantages, those that arise in connexion with the military occupation of the country by British troops are not the least. India for many years has supplied a field for the practical instruction in war of a large part of the British Army, without cost to the Home Government, instruction which could not have been elsewhere obtained. Neither should it be forgotten that the Army of India maintains, without cost to England, a most efficient reserve of strength, which could, in case of necessity, be rapidly and extensively increased for operations out of India from the warlike populations of Northern India. The transports provided and maintained for the passage of the European troops to and from India at a heavy charge to this country, far in excess of what the mere cost of transport would otherwise involve, likewise furnish to England a useful adjunct to its military resources. . . . A very large part at least of the costly improvements of system made of late years in the British Army were rendered necessary exclusively by reason of the position that England holds as one of the Great Powers of Europe, and . . . for all merely Indian purposes a far less costly machinery would have sufficed. For this reason, if for no other, we cannot acquiesce in the principle, which appears to have been adopted without discussion, for regulating the share of the military charges of England to be apportioned to India. It is not just that the two Governments should be treated as partners, having an equal interest and equally liable to bear these charges, in the mere numerical ratio of the men employed by each."

Para. 19.

83. The Government of India considered it useless to attempt in such a manner to divide the charges fairly; "All that we can do is to appeal to the British "Government for an impartial review of the relative "financial capacity of the two countries to bear the "charges that arise from the maintenance of the Army "of Great Britain, and for a generous consideration "of the share to be assigned by the wealthiest nation "in the world to a dependency so comparatively poor "and so little advanced as India. The question," they urged, "is one to be decided, not by the mere "rules of arithmetic, but on broad and statesmanlike "views of public policy, which shall fairly adjust the "claims of England to the capacities of India." The

Para. 21.

settlement might take the form either of a capitation rate on the force maintained in India, or of a yearly lump sum. The general object would "be best met "by fixing for a term of years . . . the total sum "to be paid by India to Great Britain for all the "military services for which payment is now made to "the War Office," which, they thought, should for the present be fixed at "approximately that paid during

Para. 22.

"the period extending from 1871-72 to 1875-76, or "about 800,000*l.* or 900,000*l.*" They pointed out that the military expenditure was already nearly "40 per "cent. of the whole sum required for the purposes "of administration," and must necessarily be expected

Para. 28.

to increase; and they adverted to the prejudicial effect which would be produced among the people by "a "feeling that they were being treated by Great Britain "with want of justice or generosity."

Despatch to India, 22nd Aug. 1878, No. 282 F.

84. In answer, Lord Cranbrook showed "that the "interests of India in regard to these charges have "been very carefully guarded by successive Secre-"taries of State, and that the representations made "on the part of the India Office have been greatly "aided by the cordial support of the Government of "India," to which the letters under reply were "cal-"culated to give additional force, . . . in favour "of an adjustment of these claims on a basis which, "while duly protecting the interest of the British "Government, shall be fairly liberal towards India." The adjustment effected to the close of 1878-79 was, "on the whole, very favourable to India."

Letter from India, 21st March 1879, No. 96 F.

85. The Government of India replied, making no objection to the arrangement as regards the past. But they wished again to "point out, in general terms, "that the rate should be fixed, not merely on a con-"sideration of the number of troops serving in India, "or of the recruits supplied for that service, but also "with some regard to the advantages which Her "Majesty's Government derive from the maintenance "of a large army, both British and Native, in India, "which in time of need has often been made available "as a reserve for Imperial purposes, and from the "presence in England of the officers and men con-"nected with the depôts of British regiments and "batteries;" and, further, "India should not be "charged with any Home expenditure which is not "an actual extra expense arising from the employment "of British troops in India."

Despatch to India, 13th Jan. 1881, No. 9 F.

86. Owing to the question of Army organisation being under the consideration of a Royal Commission, and to the appointment of a Commission in India to investigate the military charges, Lord Northbrook's Commission were unable to fix a capitation rate; but, in a first Report, dated the 4th of October 1880, they recommended that the claims for 1879-80 should be settled by a payment of 500,000*l.*, which was to "include the claims for the deferred pay of soldiers "and for educational establishments." This proposal was accepted.

Enclosures to Despatch to India, 9th June 1881, No. 185 W.

87. On the 24th December 1880, the War Office announced the conclusions at which they had arrived, with the view of meeting as far as possible the objec-tions of the India Office to the short-service system. The minimum age for enlistment was to be raised from 18 to 19, unless the recruit's standard of physical development was normal for a youth of 19; no man was to embark for India till he had served six months in the army, and was or looked 20 years of age; all soldiers were in future to enlist for seven years with the colours and five with the reserve, the seven being extended to eight if the service were completed while in India; the tour of service of an infantry battalion was to be increased from 12 to 17 years, owing to which only three battalions in India would be relieved annually, and only one of them be brought home as a body, the relief in the case of the other two being only of the head-quarters and men who had less than two years remaining with the colours. Mr. Childers anticipated that these measures would result in a saving to India of nearly 200,000*l.*, principally in regard to pensions. Lord Hartington accepted these proposals on the 23rd of February 1881, remarking, however, that "a portion at least of this saving in "pensions would accrue without the changes now "proposed."

88. In 1879 a special Committee was appointed at the India Office "to consider what reductions could "be effected in certain branches of Indian expendi-"ture;" and in their 8th Report, dated the 7th of August 1880, they described the system of payments to the War Office, but made no recommendation re-garding the effective services, the consideration of a capitation rate being then before Lord Northbrook's Commission.

Report, para. 209.

89. The Commission on the Army in India in 1879 spoke strongly of the increase of cost and material reduction in efficiency caused to the British Force in India by the short-service system. They had "no "hesitation in recommending that, until the short-"service system as at present administered be altered, "no soldier under three years' standing be embarked "for service in India; that no men be allowed to "proceed to India who have not extended their service "with the colours to a period of nine years; that any "men or non-commissioned officers who may desire to "remain in India, may be allowed to volunteer, on "bounty, for a further period of six years' service "with the colours in India, and may be permitted to "join any battalion with not less than six years' "service in India before it. A battalion may, under "the present system, lose two-thirds of its strength "of disciplined soldiers, and have raw recruits in "their place, two or three times over during its tour "of Indian service."

Despatch to India, 31st Aug. 1882, No. 271 F.

90. In a second report, dated July 1882, Lord North-brook's Commission, taking "as a basis the contribu-tion of 500,000*l.*" for 1879-80, made the following alterations for 1880-81 and 1881-82. For the first year they added 15,000*l.*, and for the second year a further sum of 15,000*l.*, on account of deferred pay; for 1880-81 they added 5,000*l.*, and for 1881-82 7,000*l.*, on account of Engineer officers reduced in India, and remaining in excess of the Home Establishment till absorption; in 1881-82 they deducted 50,000*l.* on account of the pay of colonels of cavalry and infantry transferred to the non-effective charges. The result was that a payment of 520,000*l.* for 1880-81, and of 487,000*l.* for 1881-82, was recommended and accepted.

Despatch, to India, 31st May 1883, No. 159 F., 27th Nov. 1884, No. 374 F., and 22nd July 1886, No. 209 F.

91. In 1883 a "Memorandum of Agreement" was adopted to facilitate the settlement of accounts, in which it was laid down, that "the pay of all officers "ordered to India will be chargeable to Indian "revenues from the date on which they embark for "that country. . . . India will bear their pay up "to the date of return to this country, or to a colony, "and also their furlough pay while on leave from "India." Officers placed on half-pay, or the retired list, would not be paid by India after that date. Officers on furlough entering the Staff College would be paid by India, so long as their corps remained on the Indian Establishment. If sent from India for a course of military study, they would be paid by India. Royal Artillery officers, seconded to join the advanced class at Woolwich, would have their passages from Indian revenues, but their pay in India from Imperial funds. Those sent home to the School of Gunnery would, on leaving the school, be paid by India if returning within three months to batteries in that country. "The entire pay and allowances of other "officers (including the pay of young officers at home "but posted to corps serving in India, from the date "of first appointment to the date on which they em-"bark for India . . .) will be borne by Imperial "revenues, irrespective of the locality in which the "regiment, battalion, or battery, to which they "nominally belong, may be serving. . . . The "advances of pay to regiments, battalions, and bat-teries proceeding to India will be made by the India "Office, or repaid by that Department when neces-"sarily made from army funds, the charge being borne "by Indian revenues from the date of embarkation." Advances to detachments and details proceeding to India were to be made by the War Office, and charged to Army Votes, being covered by the contribution for effective services generally. This memorandum was revised in 1886 in certain matters of detail.

Despatch to India, 22nd April 1886, No. 120 F.

92. The third Report of Lord Northbrook's Commission, dated the 28th of December 1885, settled the payments for 1882–83, 1883–84, and 1884–85, for effective services, except as to deferred pay. Taking, again, the basis of 500,000*l.* in 1879–80, and deducting 50,000*l.* for the pay of colonels of cavalry and infantry which had become a non-effective charge, and also 29,000*l.* for deferred pay which had been included in 1879–80, the amount was reduced to 421,000*l.* for each of the three years; but, as in 1882–83 and 1883–84 India had received and erroneously credited to the Imperial Government 4,029*l.* and 4,372*l.* respectively, on account of fines for drunkenness, the amount payable was 416,971*l.*, 416,628*l.*, and 421,000*l.*, for the three years.

Ditto, 17th May 1888, No. 119 M.

93. In 1887 the Government of India sent home a scheme for mobilization, on which the War Office remarked that "to encourage India to reckon in her "mobilisation scheme upon receiving from England "re-inforcements, amounting in all to 700 officers and "13,000 men, might lead to that scheme being based "on expectations impossible to realize, and thus to its "breaking down when required."

Ditto, 15th Dec. 1887, No. 319 F.

94. In two letters, dated the 29th January and 22nd of October 1887, the India Office urged the War Office to supply Lord Northbrook's Commission with the detailed information respecting deferred pay, which would admit of the accounts for 1882–83, 1883–84, and 1884–85, being closed; and on the 10th of November 1887 the War Office forwarded a memorandum explaining the manner in which the claim for deferred pay had been compiled. The amounts showed so rapid an increase that a special examination was made by Lord Northbrook's Commission, who, in their fourth Report, dated the 31st of July 1888, said that they were satisfied of the general accuracy of the claims. Assuming that one-third of the deferred pay issued in India might be taken as being due for British Service, and making the requisite deduction accordingly, they found the sums payable by India to be 97,714*l.* for 1882–83, 163,153*l.* for 1883–84, and 101,338*l.* for 1884–85.

Ditto, 22nd Nov. 1888, No. 296 F.

95. At the same time that they transmitted the calculations respecting deferred pay, the War Office forwarded their general claims for 1885–86 and 1886–87, which were sent to the Government of India for information; but a twelvemonth later they furnished revised claims for those years, which also were furnished to India.

96. In 1888 a detailed examination of the Home charges was begun by a special Committee appointed at the India Office to investigate them; and in their 12th Report, dated the 5th of April 1889, they examined the payments to the War Office. "We consider it most "important," they said, "that a capitation rate, either "on the force in India or on the number of recruits "sent out, should be determined, by means of which "the payments for effective services may be promptly "decided, and thus the delay in settling the accounts "may be avoided which has occurred ever since the "abandonment of the capitation rate at the end of "1869–70. This question has been for 10 years under "the consideration of Lord Northbrook's Commission, "which was appointed for the purpose in February "1879; and we would urge on your Lordship the "importance of doing all that lies in your power to "expedite a conclusion of the matter. . . . We "wish, however, to draw attention to the fact that "there are questions of policy which may have to be "considered in determining what share of these charges "should be borne by India."

Para. 11.

Para. 13.

97. The claims of the War Office for 1885–86 and 1886–87 were sent to the Government of India at the same time as the fifth Report of Lord Northbrook's Commission, which was dated the 22nd of July 1889, and determined the payments for 1885–86 and 1886–87. The claims had been compiled under the following heads:—1. Capitation on troops embarked for India; 2. Charges for depôts for training recruits; 3. Agency; 4. Charge for men who deserted, died, or were discharged with less than one year's service; 5. Maintenance of young officers on first appointment to regiments serving in India, previous to embarkation; 6. Cost of young officers of Royal Engineers for India, while under instruction; 7. Difference between the pay of two colonels and one lieutenant-colonel on the Indian Establishment of Royal Engineers, but employed at home, and the pay of three lieutenants employed instead by India; 8. Cost of training veterinary surgeons for India; 9. Cost of examination of candidates for Indian medical service; 10. Educational establishments; 11. Advance of 25 days' pay to men embarked as drafts to India; 12. Expenses of men awaiting discharge, including pay and travelling expenses of invalids; 13. Share of cost of pay and allowances of staff of hospitals and discharge depôts, and expenses of invalids except pay and travelling. From the aggregate of these heads was deducted a rebate of one-third of the rate payable for similar ranks on embarkation, in respect of men who returned for futher service with colours or reserve, and of invalids who recovered and continued in the service. The Commission accepted the War Office claims as a basis, but made considerable further reductions on account of (1) men embarked without full training; (2) service rendered to the Imperial Government before embarkation; (3) artillery depôts (horse and field), for excess of men sent to home batteries over those sent from home batteries to India; (4) additional rebate on men returned to England for further service with the colours or reserve. Thus corrected, the payments were determined to be for 1885–86 648,799*l.*, and for 1886–87 512, 587*l.*, in addition to deferred pay 101,531*l.*, and 114,950*l.* respectively. The large amount of the payment for 1885–86 was owing to the augmentarion of the British Force in India.

Despatch to India, 27th March 1890, No. 55 F.

98. In accepting the award, the India Office pressed for the adoption of a capitation rate for the future. The War Office were similarly disappointed that this had not been done, and also expressed dissatisfaction that their claims had been subjected to very heavy reductions. They admitted that the awards for 1877 and the following years had been "in excess of the "payment suggested in 1877–78, viz., a capitation "rate of 6*l.* 10*s.* for each man serving in India; but "the full effect of short service is now being felt, and "the number of men annually required for Indian "service is very large. The difficulty of raising these "men and satisfying the requirements of the Indian "Government, as well as the demands of the House "of Commons, that all soldiers embarked must be "fully developed and completely trained, increases "year by year; and Mr. Stanhope, therefore, desires "that it be fully understood, should he abide by the "award for the two years now dealt with, that he is "not prepared to accept, without a strong protest, a "contribution short of 600,000*l.* for any subsequent "year."

99. The Treasury forwarded this letter to the India Office, stating that they had agreed to accept the award, but that there appeared "to be considerable justice" in Mr. Stanhope's dissatisfaction. In reply, Lord Cross pointed out that the basis of the claims had been materially modified by the War Office; and he considered that it would not be possible for the Commission to adopt a capitation rate, until they should have learnt the opinion of the Government of India on the manner in which the new claims for 1887–88 had been prepared, which had already been sent out for report. He fully shared the desire for the speedy adoption of a capitation rate, and admitted that the award of the Commission might need careful examination before its final acceptance; but it was not without surprise that he had "read the intimation given "beforehand, that the Secretary of State for War will "not be prepared to accept, without a strong protest, "any award that may fall short of a specified "amount."

Despatch to India, 3rd Oct. 1889, No. 216 F.

100. The claim for 1887–88 was preferred by the War Office on the 7th of August 1889, in a letter pointing out that it differed "from those for the pre- "ceding years in the following respects:—(1) The "whole cost is charged of the cavalry depôt and the "depôts of the horse and field artillery, instead of as "heretofore the cost of the staff employed at the above "depôts with a capitation rate for each recruit sent "out to India. At the same time an allowance has "been made for every man transferred from these "depôts to serve with regiments or batteries on the "Imperial establishment. (2) A reduction is made in "certain cases from the full capitation rate for men "despatched to India, either before the completion of "the training period or with more than one year's "service. (3) The rebate allowed for men returned "for further service with the colours or reserve, in "the case of the cavalry, horse, and field artillery, is "calculated on the cost of a recruit for one year "instead of nine months. With regard to (1), . . . "both the cavalry depôt and the horse and field "artillery depôts have been organised and exist solely "to meet Indian requirements; and, . . . as the "establishments maintained are only just sufficient to "supply the annual drafts required for India, it is "impossible to absorb in the home regiments and

" batteries those who are left behind at the end of the " trooping season by reason of their not complying " with the stringent conditions imposed by the Indian " Government in respect of age and service. Such " being the case, Mr. Secretary Stanhope is strongly " of opinion that Indian revenues should bear the full " cost of these special depôts."

101. At the same time, a memorandum by the Accountant General of the Army was forwarded, " proposing the basis on which these claims should for " the future be settled. It should be specially observed " that the numbers of men to be despatched each year " to India, on which the claim of 600,000*l.* is built up " . . . are arrived at on the assumption that every " man is sent out after only one year's service at home, " and that, therefore, this claim is not susceptible of " any such reductions as are admitted in that for " 1887–88 on account of men embarked with long " Imperial service; otherwise, the annual drafts would " be larger, and the claim proportionately increased." Mr. Stanhope fully concurred in the memorandum, " and, in view of the great cost thrown upon the Home " Exchequer by the maintenance of British troops in " India, . . . he would not be justified in accepting " a less sum than 600,000*l.* per annum in payment of " the home charges, exclusive of deferred pay."

102. Mr. Knox's memorandum, dated 26th of April 1889, said that " the actual cost to the British " Exchequer of raising and training the force " necessary to maintain the Army in India is clearly " the cost of raising, paying, and maintaining the " force in this country, which would not be maintained " if the Indian Army had not to be kept up. At the " very minimum this consists of 200 private soldiers " in each of 50 infantry battalions, and 400 in three " others, viz., those intended to effect the annual " reliefs; on the other hand, an allowance must be " made for a decrease during that part of the year " when the drafts are being despatched, and the " numbers fall below establishment. In addition to " these there is one-fifth of the cadres of 53 depôts, " the whole of the cavalry depôts, the two depôt " batteries of Horse Artillery, four depôt batteries of " Field Artillery, and five batteries of Garrison Artil- " lery (including one mountain battery). The total " of these numbers amounts to a little more than " 16,000 officers and men, or about one-seventh of the " Home force. In connexion with these there are the " staff and departmental charges, as well as the charges " for administration. With the exception of the " Ordnance Store Department, whose heaviest work " arises from the supply of armaments to the Navy and " land fortifications, the time of the officers of the " staff and departments is largely occupied in dealing " with the raising and training of the younger soldiers, " their inspection, and embarkation; and it is evident " that these 16,000 men should bear a share of their " cost. Besides these, there is a part of the cost of " the educational establishments and the hospitals " for Indian invalids. On this basis the total cost of " this force would amount to 1,081,000*l.*

103. " When it is borne in mind that all the diffi- " culties in the organisation of the Army during recent " years, and the grants of additional inducements to " men to join the Army, have been mainly due to the " necessity of keeping a largely increased European " force in India, it is difficult, in justice to the Home " taxpayer, to see on what grounds any modification " can be made of this claim as the payment to be made " by the Indian Government.

104. " Arguments have been advanced, however, in " support of a reduction, the chief one being that " during their recruit training, and even more so after " its completion, these men are of service to the Home " Government, and, being on the spot, are at all events " available in times of emergency. The fact that, so " long as they remain in this country, they are avail- " able, cannot be denied; but yet the Home Government " does not rely on them, because, in the case of " emergency, it is not these young soldiers who would " be used; and, to avoid the necessity of their services, " the Home Government is paying nearly 500,000*l.* a " year for the reserve. In fact, the Home Government " rather regards the year's drafts as the first reserve " for the Indian Army in the event of active operations, " inasmuch as the despatch of the annual draft would " at once increase the Indian Force by 10,000 men, the " short-service men due for discharge from the colours " being at the same time retained in that country." In accepting their time in England as debitable against Imperial revenues in the assessment of pensions, " the " Home Government makes sufficient allowance for " whatever advantage is derived from the presence of " these young soldiers in this country.

105. " Nevertheless, . . . there has been every " desire to treat the Indian Government with as much " generosity as was defensible. Every consideration " has been given to the various arguments advanced " for making some reduction in the full cost, and for " providing the force as economically as possible. " With this object the system of short service has " been introduced, a measure most beneficial to Indian " revenues, and a mode of calculating the depôt " charges proposed, which relieves the Indian Govern- " ment of more than one-third of the actual cost " incurred. . . . . The actual cost of the Home " charges amounts to 1,081,000*l.*, whereas the charge " proposed to be made is only 605,000*l.*, or a reduction " of 476,000*l.*

106. " The charges made against the Indian Govern- " ment for the supply of recruits in times before the " Indian Mutiny, and between that period and the " introduction of short service," were, when re-adjusted for comparison, from 1834 to 1857, 170,000*l.* per annum, the force in India being 24,000 cavalry and infantry, and for 1870–71 450,000*l.*, the force being 63,000 cavalry, artillery, and infantry; " the charge " for the present force of 72,400 men, calculated at " these rates, would amount to 510,000*l.* and 517,000*l.* " respectively. Improved rates of pay account for a " further increase of 20,000*l.*, making a total charge of " 537,000*l.* to compare with the claim now preferred, " 605,000*l.* It is calculated that the number of men " to be despatched to India yearly" will be about 10 per cent. beyond the total embarked in 1870–71, " which corresponds very closely with the increase in " the proposed claim, and this notwithstanding the " stringent conditions made in recent years for " securing that only completely trained men of full age " shall be despatched from home.

107. " The system of enlistment for short service " was introduced for a threefold object:—(1) To meet " the growing objection to lengthened service in the " Army; (2) to obtain the means of rapidly expanding " the Army by means of a thoroughly trained reserve; " (3.) to reduce the cost of the Army by largely " diminishing the charge for pensions. It was obvious " that short service would create an increased demand " for recruits, the cost of whose training would give rise " to a considerable expenditure. As affecting the " Indian Government, this would be due to (1) The " increased number of recruits trained; (2) the in- " creased number of men to be interchanged between " home and India; (3) the grant of deferred pay. " Against this, however, there must be set the large " saving in the charge for pensions." The payments to be made by India, under the long and short service systems, would be thus compared:—

	In 1889–90.		In future, when a Normal Condition is reached.	
	Long Service.	Short Service.	Long Service.	Short Service.
	£	£	£	£
Home Charges	537,000	605,000	537,000	605,000
Deferred Pay	620,000	160,000	971,667	211,000
Pensions		452,000		302,233
	1,157,000	1,217,000	1,508,667	1,118,233
	Increase	60,000	Saving	390,434

There is a large reduction also in the charge for sea transport since 1870–71.

108. " In the mode adopted for making a large reduction in the charge for depôts there may be some minor points which are debateable, due to the fact that it is built up artificially; but I submit that the result,

which surrenders nearly 500,000*l.* to the Indian Exchequer, is so favourable to the Indian Government, that no force can be allowed to criticisms upon minute details, and that the Home Government cannot consent to any further diminution of the claim. The proposal made would stand thus: 1. The Indian Government shall pay a contribution of 600,000*l.* a year, in quarterly instalments, on account of the Home charges stated. 2. That for every man deficient in the establishment of the Army in India on 1st May in each year, a deduction of 50*l.* shall be made from the quarterly instalment next due. 3. That a direct charge be made against the Indian Government for deferred pay."

No. 70 M

109. In a letter dated the 25th of March 1890, the Government of India replied to the request for a statement of their views on the principles upon which the claims of the War Office for the years 1885–86, 1886–87, and 1887–88 had been preferred. Many of their objections had been anticipated by Lord Northbrook's Commission, and others were merely founded on want of detailed information. They observed that the principles stated in the War Office memorandum of the 26th of April 1889 might be thus summed up:—

P. 5. "The actual cost to the British Exchequer is the cost of raising, paying, and maintaining the force in the United Kingdom which would not be maintained if the Indian Army had not to be kept up; all the difficulties in the organisation of the British Army during recent years, and the grants of additional inducements to men to join the Army, have been mainly due to the necessity for keeping a largely increased European force in India; the 11,500 young soldiers to be annually despatched to India (excluding the cadres of old soldiers who are exchanged on the relief of a regiment or battery) form a portion of the 16,000 officers and men maintained in England for the purposes of India, and are the first reserve for the Indian Army in the event of active operations; to avoid the necessity for employing them in Imperial service, the Home Government pay nearly 500,000*l.* a year for the army reserve; and, with the object of providing the force for India as economically as possible, the short service system has been introduced, a system which is described as most beneficial to Indian revenues, and a mode of calculating the depôt charges has been proposed, which relieves Indian revenues of more than one-third the actual cost incurred; and, generally, although the validity of the arguments used on the side of India is not admitted, yet, in deference to these arguments, there has been every desire to treat the Indian Government with as much generosity as was defensible. The War Office state that, calculating the payment made during the time of the East India Company, taking the period 1834–57, the cost for the service of British troops at the rates then paid, allowing for improved pay, would now be 530,000*l.* per annum. Further, the War Office assume that the real annual cost of the troops (16,000) maintained in England for Indian purposes is 1,081,000*l.* The proposal of the War Office is that (1) India shall pay 600,000*l.* annually. (2) A deduction of 50*l.* to be made for every man deficient on the Indian Establishment on the 1st May. (3) A direct charge to be made against India for deferred pay. The conclusion is, on the side of the War Office, that, although the charge for the depôts is built up artificially, the result—surrendering nearly 500,000*l.* to the Indian Exchequer—is so favourable to the Indian Government, that no force can be allowed to criticism upon minute details, and that no further diminution of the claim can be consented to. The result would be that the annual claim against India for Army effective services, when the item of deferred pay reaches the normal amount, 211,000*l.*, would amount to 811,000*l.*"

110. The Government of India proceeded to state that it was "nowhere proved that the charges raised on account of" the European force maintained in India "represent the actual cost to the British Exchequer. . . . "The difficulties in the organisation of the British Army, and the necessity for inducing men to join the army, cannot be admitted to arise from the presence of a portion of the Army in India. . . . . Nor can we accept without question the statement that the Indian drafts are the 'first reserve' for the Indian Army, and that, in order to avoid employing them elsewhere, the Home Government pay 500,000*l.* a year for the Army reserve." The corps "sent out to India are despatched during the whole of the trooping season, to supply the places of men being sent home discharged to the reserve or invalided, and to make good the annual waste of life; so that the assumption of the War Office . . . . could hold good only if war were imminent at a particular moment before the commencement of the trooping season." Further, Mr. Stanhope had said that "it was far from improbable that the same circumstances which necessitated a mobilisation in India might also render it impossible for this country to part with any considerable portion of the small number of regular troops in the United Kingdom"; therefore it could "not be alleged with accuracy that the reserve is kept up because the services of these 11,500 men are hypothecated to India. . . . . We do not understand that 16,000 men are kept up all the year round; and the army reserve was instituted in order to give the British Army a reserve of trained soldiers, and to enable a reduced army to be maintained at home; the interests of India were in no way especially considered."

111. "It was no consideration for the efficiency of P. 8.
the Army in India that evoked the short-service system, and its suitability to the condition of Indian requirements has been gravely questioned." "Strong P. 11.
objections, both financial and military, have from time to time been raised against its application to this country." "Pensions are reduced under the P. 12.
short-service system, but the loss by mortality and invaliding, the increase in the number of passages to be provided, deferred pay, and other inducements to serve, go a long way to counterbalance any economy." As was written in 1873: "While the cost of the recruit has been increased, the term of his service has been diminished; India, therefore, for a larger charge receives a less service."

112. As regards the depôt charges, they "should be Enclosure, para. 37.
reduced, on the grounds that the officers and men form part of the military strength of England, that depôts need not be specially kept up for India on so large a scale, and that many of the charges are excessive. It would be cheaper to have separate Indian depôts, like that at Warley (which supplied recruits at 20*l.* per man), and give the further training to the men out here; the expense would not be nearly so much as the present plan, which seems to lighten the English estimates by making India pay for training men in Cavalry, Artillery, and Infantry depôts, organised on a far larger scale than she requires." "The total cost to India of the depôts Letter, p. is 359,597*l.* for 1887–88; the Cavalry depôt at Canterbury alone costs India 93,310*l.*, and supplied 410 men to Indian service."

113. The Government of India wished especially P. 15.
to "lay stress on the fact that the Indian Army supplies a great addition of military power to England, that a large part of the British Army is trained at the expense of India, and that the whole of the men passed into the reserves from the 70,000 troops in this country have been maintained entirely out of Indian revenues from the date of their first recruitment. It is true that, on the men joining the reserve, their pay is henceforward charged to the English estimates; but this forms a very small part of the whole expense which has been incurred on their account, and, therefore, it will be seen that India contributes largely to the maintenance of a force which is not available for Indian requirements. . . . . The guiding policy in this matter should be that of true reciprocation; and the expenditure charged by England should be limited not by arithmetical details, but by statesmanlike and broad appreciation of the conditions of the two countries."

114. In commenting on the details, the Government P. 16 (xiv)
of India laid special stress on the inadequacy of the amounts allowed for rebate, which, in their opinion, "ought to be one-half of the charge for the soldier, calculated not merely upon certain charges included in the capitation, but upon the charges for the depôts as well; that is to say, the rebate should be made on the sums actually paid by India for every soldier embarked, and this rebate should be one-half instead of one-third."

115. They summed up the reductions which they considered to be justified, in the following table :—

	War Office Claim.	Reduction.
	£	£
1. Capitation on troops embarked for India.	230,823	100,000
2. Charges for depôts - - -	359,597	100,000
3. Agency - - - -	3,763	3,763
4. Charges for men deserted, died, or discharged.	8,766	8,766
5. Maintenance of young officers in England previous to embarking for India.	8,590	3,000
6. Cost of Royal Engineer officers while under instruction.	5,415	2,700
7. Cost of training veterinary surgeons -	600	600
8. Cost of examining candidates for Indian Medical Service.	432	200
9. Educational establishments - -	45,187	15,186
10. Advance of pay - - -	9,708	—
11. Expenses of men awaiting discharge, &c.	19,497	10,000
12. Share of cost of hospital and discharge depôts.	30,425	16,000
	722,713	260,215

P. 18. P. 19. 116. The net War Office claim for 1887-88, after allowing for the rebate of 120,000*l.* admitted, might therefore be taken at 350,000*l.*, exclusive of deferred pay. This, on the established strength of 70,000 British troops, would represent a capitation rate of 5*l.*, "which "accordingly we recommend should be taken as the P. 20. "basis of calculation in the future." But the Government of India could not "hope that the claims of "India will be heard, unless your Lordship in Council "can move Her Majesty's Government to deal with P. 21. "the question as an Imperial one. . . . . The "revenues of India have been charged with the cost "of many changes in organization not specially "necessary for the efficiency of the Army in this "country, and with the cost of troops employed on "Imperial service beyond the limits of India. Millions "of money have been spent on increasing the Army "in India, on armaments, and on fortifications, to "provide for the security of India, not against domestic enemies, or to prevent the incursions of the "warlike peoples of adjoining countries, but to maintain the supremacy of British power in the East. "The scope of all these great and costly measures "reaches far beyond Indian limits, and the policy "which dictates them is an Imperial policy. We "claim, therefore, that, in the maintenance of the "British forces in this country, a just and even liberal "view should be taken of the charges which should P. 22. "legitimately be made against Indian revenues." They concluded by urging "that the people of India, "who have no voice in the matter, should not be able "to complain that an excessive military tribute is "demanded from this country, while, on her side, "England, with whom rests the final decision, should "be able to show that this settlement has been "effected in a spirit of justice and consideration to "India."

Despatch to India, 5th Feb. 1891, No. 30 F. 117. Copies of this letter and the enclosed memorandum were, on the 30th of April 1890, forwarded to the War Office and the Treasury, with a request that it might be forthwith laid before Lord Northbrook's Commission for consideration with reference to a capitation rate for 1887-88, and subsequent years; and Lord Cross drew special "attention to the broad "considerations urged by the Government of India "as to the apportionment of the charges in England, "attributed to the maintenance of a European force "in India." Further letters, pressing for the transmission of the Government of India's Despatch to the Commission, were sent on the 25th of July and 11th of August 1890 and the 24th of March 1891. At length, on the 15th of April 1891, owing to the continued delay, the India Office begged that Lord Northbrook's Commission might be asked to "adjudicate on the "claims for 1887-88, 1888-89, and if possible 1889-90, "on the same basis as before, leaving the determination of a permanent capitation rate for a subsequent "report." Some discussion ensued as to the form of the claims; and Lord Cross insisted that either they must be submitted as before, or that if prepared on the new basis of depôt charges adopted by the War Office, the Government of India's letter objecting thereto should be also laid before the Commission. At length, on the 18th of July 1891, the Treasury forwarded that letter to Lord Northbrook, together with one from the War Office, of the 13th of August 1890, commenting thereon. Mr. Stanhope, it was said, felt "considerable difficulty in dealing satisfactorily with "the matter. . . . . The effect of the proposals "of the Indian Government would be to reduce the "contribution payable by India to a sum of about "350,000*l.*, irrespective of deferred pay. This is not "very much more than half the sum which Lord "Northbrook's Commission, dealing with the question "mainly as a matter of account, and certainly with "no particular bias in favour of the British Exchequer, "has regarded as an adequate payment. Such a "reduction, however, supported by detailed criticism "of particular items, could clearly only be justified "by considerations of policy. And it is thus, in effect, "that the Indian Government seeks to justify it, "raising for the purpose such large questions as the "relative advantage which the people of Great Britain "and India derive from their connection with one "another, and the assumed degree in which it is the "duty of Great Britain, as the repository of Imperial "power and the wealthier country, to bear a portion "of the military burdens hitherto borne by India "almost as a matter of course. Questions of this "kind, as it seems to the Secretary of State, cannot "be held to fall within the legitimate scope of the "inquiry of Lord Northbrook's Commission, a Commission constituted for the adjustment of matters of "account rather than of political investigation."

Ditto, 26th March 1891, No. 70 F. Ditto, 27th Aug. 1891, No. 156 F. 118. Mr. Stanhope proceeded to remark that "the "Indian Government seem to hold that Indian funds "are not justly liable for any expense attendant on "changes in the Army, unless such changes have "been made specially in the interests of India; but "such a view is manifestly inadmissible. Short service, the re-arrangement of the depôts, the grant of "deferred pay, are measures which, it must be "assumed, have rightly been regarded by successive "Secretaries of State for War as essential to the "existence and well-being of the Army, and India "must bear its share of the burden involved. The "War Office is at all times prepared to give full "consideration to Indian interests; but it must be for "the War Office, in the last resort, to determine under "what conditions the Army can be raised. The "assumption that India is a great reservoir of "strength to England may be sound; but the British "Army is rapidly becoming simply a feeder to the "Indian Army; India gets the best men for the best "of their service.

119. "The Indian Government dwell upon the "alleged injustice with which the charges for British "and Indian troops have been apportioned when "British troops have been specially lent for Indian "service, or, *vice versâ*, when Indian troops have been "employed in Africa, Egypt, or outside the confines "of India generally. But, as regards this, it must be "borne in mind that any nice distinction, such as the "Indian Government seem to contemplate, between "Indian and Imperial interests, cannot be drawn, and "that the vital interests of India extend very much "beyond the confines of her own territory. . . . . "If any large reduction is to be made in the Indian "contribution, it can only be justified by considerations based on the relative wealth of the two "nations; and their Lordships will probably agree "with Mr. Stanhope that the time when a plea of "poverty can be put forth on behalf of India has not "yet arrived."

120. With this letter was forwarded a memorandum on the Government of India's despatch, in which it was said, "No one of any experience will deny that the "difficulties in the organization of the British Army "are due to the great demands for service out of the "United Kingdom. Three-fourths of this is due to "the Army in India; and since the Indian Mutiny "the European force in that country has been increased 75 per cent. This seems to prove that the "difficulties in the organization of the Army are "mainly due to Indian service. . . . The interests "of India were specially considered in the introduction "of short service; when the period of six years was "adopted, directions were at the same time given to "enlist one-fourth of the recruits for long service, "with special regard to foreign service; this was "subsequently modified, and long-service enlistment

" given up and replaced by the extension of the " service of the men originally enlisting for six years, " when it was found that these men were willing to " continue their service. It was contemplated that " the Reserve should be available equally for Indian " and general service, and for this reason the Indian " Government was asked to pay a share of the cost of " maintaining it, but the claim was not admitted; " notwithstanding this, the Reserve is still, of course, " available to meet Indian emergencies, though not a " third of them consist of Indian service men. . . . . " India has certainly urged that soldiers of longer " service were better adapted to meet the wants of " that country, and various modifications in that " direction have been introduced; the period of service " has been extended by one-third, so that now it differs " by two years only from that which obtained during " the period from 1847 to 1877, with the result that the " Service no longer possesses the attraction of short- " ness, and recruiting is by no means satisfactory. " The fact is that the requirements of India have " been the chief, if not the only, consideration." Various other comments were made on the detailed criticisms of the Government of India.

In the end, however, the War Office amended the claims so that they were on the same basis as had previously been adopted, and consequently the Commission did not take into consideration the letter from India or the War Office comments thereon; and, the calculations having been checked at the India Office, Lord Northbrook's Commission made a sixth and final report, on the 22nd of March 1892, in which they decided to award 527,818*l.* for 1887–88, 539,448*l.* for 1888–89, and 521,009*l.* for 1889–90, besides 138,118*l.*, 180,500*l.*, and 213,192*l.*, on account of deferred pay for the three years respectively. They further recommended that the accounts for 1890–91 and 1891–92 should be settled by a capitation rate of 7*l.* 10*s.* per man on the establishment in India, excluding deferred pay which would be determined by actual returns. This was accepted, and the same rate has also been applied to the accounts for 1892–93. A full report of the proceedings of Lord Northbrook's Commission, from 1879 to 1892, was furnished by Sir Thomas Seccombe on the 18th of July 1892.

Despatch to India, 18th Aug. 1892, No. 152 F.

Letter from War Office 8th Aug. 1893, F. 3839. Enclosure to Despatch to India, 18th Aug. 1892, No. 152 F.

122. The following table shows the amounts paid to the War Office for effective services in respect of each year:—

System of Settlement.	Years.	Average Effective Strength. Officers and Men.	Amount. Effective Services.	Deferred Pay.	Total.
			£	£	£
Sir A. Tulloch's Committee: 10*l.* Capitation Rate.	1861–62	58,438*	584,380		
	1862–63	69,586	695,860		
	1863–64	68,745	687,450		
	1864–65	69,313	693,130

* Exclusive of local forces.
† Arrears remitted by Treasury in 1878.
‡ After adjustment of exceptional items.
§ Augmentation of force.

123. The manner in which the expenses of foreign expeditions in which the army of India has taken part have been divided between the two Governments will be seen in the following statement:—

Expedition.	Date.	Ordinary Charges.		Extraordinary Charges.	
		Paid by India.	Paid by England.	Paid by India.	Paid by England.
1st Afghanistan	1838-42	All.	None.	None.	All.
1st China	1839-40	All.	None.	None.	All.
2nd China	1856-57	None.	All.	None.	All.
Persia	1856	All.	None.	Half.	Half.
3rd China	1859	None, except expenses of Indian Navy vessels.	All.	None.	All.
Abyssinia	1867-68	All.	None.	None.	All.
Perak	1875	All.	None.	None.	All (by Colonial Government).
Malta	1878	None	All.	None.	All.
2nd Afghanistan	1878-80	All.	None.	All but 5,000,000*l.*	5,000,000*l.*
Egypt	1882	All.	None.	All but 500,000*l.*	500,000*l.*
Soudan	1885-86	All.	None.	None.	All.

Non-effective Services.

124. Before 1823 no payment was made from Indian revenues on account of non-effective charges for British forces serving in India. In that year the Court of Directors agreed to pay 60,000*l.* a year (apparently calculated at 3*l.* a head on the maximum number of Royal troops which under the Act of 1813 could be charged against India, in full satisfaction of all claims for retired pay, pensions, &c., in respect of Royal forces having served or serving in India; and this arrangement, which was recognised by the President of the India Board as a "liberal proposition," was confirmed by an Act dated the 11th of July 1823, with effect from the 30th April 1822.

House of Lords' Return 165 of 1862, page 44, Act 4 Geo. IV., c. 71.

125. In 1858 the War Office represented the insufficiency of this payment of 60,000*l.* a year, the number of Her Majesty's forces in the employment of the Company having increased from 20,000 to 92,000, and early in 1859 a Committee, over which Sir Alexander Tulloch, the Military Superintendent of Pensioners, presided, was appointed to report on the question. In their report dated the 25th of August 1859, they assessed the charges (including "pensions to discharged "soldiers 160,000*l.*, pensions to wounded officers "2,374*l.*, retired full-pay or other military allowance "on retirement 21,541*l.*, pensions to widows and "allowances to children 15,369*l.*" total 199,284*l.*), at fully "200,000*l.* a year for an army of 30,000 of the line serving in India." If allowance was further to be made for outstanding pensions, "the addition necessary "to meet that part of the obligation would, according "to a very rough estimate, be for the first year about "128,000*l.*, but would diminish at an average rate of "about 2,000*l.* in each successive year, till this burden "was entirely extinguished." The India Office members of the Committee protested against any increase of the pensionary charges, pointing out that the arrangement of 1823 was a compromise, that India was made to bear numerous expenses, such as the Afghan War, and a considerable share in the China Expedition and Persian War, while for the maintenance and protection of her Colonies England contributed nearly 3,000,000*l.* a year, and that England derived great relief through the employment of a large part of her military force in India. At the most, they considered that the extra charge should be in proportion to the original payment, and, therefore, that for 30,000 men only 90,000*l.* should be demanded. Finally, they urged that the rate of interest adopted in estimating the value of pensions should be on the Indian and not on the English scale.

House of Lords Return 165 of 1862, page 36.

Page 42.

Page 43.

126. Before arrangements had been made, another Committee, also under the chairmanship of Sir Alexander Tulloch, was appointed in 1860 to fix an average rate for the non-effective payments; and on the 31st of January 1861 they recommended, as a temporary arrangement, a payment, for every 1,000 men of all arms in India, of 3,500*l.* per annum for the non-effective charge, which was accepted, and legalised with effect from the 31st of March 1861, at first for one year, and then for five years more, that is, till the 31st of March 1867. It was subsequently continued, without legislative authority, to the 31st of March 1870. In that year Mr. Seccombe's Committee was directed to report on the non-effective charges; and, in a report dated the 12th of August 1870, they expressed their opinion "that the Imperial Government is not in a "position to claim from the Government of India any "further payment on account of pensions granted up "to" the 31st of March 1870; "and the question, "therefore, which" they had "to deal with, is the "charge to be borne by India for pensions, half-pay, "&c., granted subsequently thereto. The Committee "have considered whether it would be practicable to "fix an average or capitation rate for the adjustment "of the charge on Indian Revenues for non-effective "services; but as the information available for "determining such a rate is very insufficient, they are "of opinion that the most satisfactory, and, in the end, "the least laborious method of fairly adjusting those "charges, will be by an actual valuation of each grant "of out-pension, pension for officers' services, pensions "for wounds, widows' pensions, or compassionate "allowances, and the proportion of such value due to "service rendered to the Indian Government—the "payment of which from Indian revenues would be a "full discharge and satisfaction for the pensions "assessed."

Page 71.

Act 24 & 25 Vict. c. 89. and 25 & 26 Vict. c. 27.

127. This plan was adopted, with effect from the 1st April 1870, actuarial tables being constructed for the valuation of the pensions, the rate of interest being taken at 4 per cent., and the age being that of the pensioner on his last birthday. In the event of an annuity ceasing from any cause other than death or commutation, a credit was given to India. "This "course," the actuaries said, "secures perfect justice "between the two governments, provided the system "be perfectly maintained, and provided, at the time "of the credit being given to India, interest be allowed "to India for the time the half-pay or pension has "been payable by Great Britain, on the difference "between the initial value of an annuity for such term "and for the whole of life. Should, at a future time, "the present system of India paying a capitalisation be "abandoned, it must be understood that India would "have to be compensated for the prospective credits." Mr. Bouverie's Committee saw "no reason to disturb "the arrangements;" and the Treasury Minute of 2nd July 1878 also said that "the Chancellor of the "Exchequer cannot advise that a revision of non-"effective arrangements be made at present."

Parliamentary Paper 24 of 2nd Sess. 1878, p. 34. Ditto, p. 7.

128. An important letter from the Government of India, dated the 8th of February 1878, respecting the payments to the War Office, has been already mentioned in connexion with the effective services (paragraph 81). Owing to the heavy cost of the remittances to England needed for the payment of the non-effective capital sums, and the inability of India to defray them without falling into arrears, a proposal was made to the War Office on the 13th of November 1878, for spreading the payments over a period of 10 years; and this was communicated to the Treasury on the 20th of March 1879. At about the same time, the Government of India, in a letter dated the 21st of March 1879, deprecated any attempt to fix a capitation rate at present, as, owing to the short-service system, and other causes, a considerable reduction was anticipated in a few years; but they suggested that a sensible relief would be obtained by a discontinuance of the system of paying the capital amounts, and adopting a plan of spreading the total charges more evenly over a series of years. They, however, referred to the suggestion made by the India Office members of the Committee of 1859, that a compromise ought to be effected "with reference to a

Ditto, 342 of 1884, p. 3.

Page 18.

Page 13.

Parliamentary Paper 342 of 1884, p. 15.

"balance of advantages," and that India should not pay its full arithmetica share of the pensions.

Page 25. 129. No reply having been obtained from the Treasury to the proposal made in 1878–79, the India Office, on the 4th of April 1882, proposed that 200,000*l.* a quarter should be paid to the Treasury, interest on the amount then outstanding and on all future liabilities being credited to the British Government, and interest on the quarterly payments being allowed to the Government of India. It was anticipated that, under such an arrangement, the amount outstanding would, at the end of 15 years, not be larger than at present, and that the normal payments might then, including interest, be about 800,000*l.* a year. At this Page 27. time it was calculated that up to the 30th of March 1880 the unpaid non-effective charges amounted to 1,038,824*l.*; and, according to the estimates for the next three years, the amount outstanding on the 31st of March 1883 would be 2,016,824*l.*

Page 28. 130. At length, on the 22nd of January 1883, the Treasury replied to the proposals of the India Office. They said "that it is plain that interest should be "charged on each sum in arrear, from the time at "which it became due to the time when it shall have "been paid off, and that the rate of interest assumed "for this purpose should be the same as that upon "which the calculation of the capitalised value of the "prospective pensions was originally made." And they would make no objection to the repayment of the amount thus arrived at, by means of a ten years' annuity. The Secretary of State in Council replied on the 2nd of March 1883, demurring to the charge of interest, which was never imposed on sums under settlement between the two Governments, even when as in the case of the Afghan, Perak, and Abyssinian expeditions, the settlement of accounts had been delayed for six, seven, and twelve years, and the Government of India had themselves been obliged to borrow in order to make the necessary advances. The delay in the present case did not originate with the India Office, but with the Treasury or War Office. An increase had been anticipated when the soldiers "enlisted during the Crimean war and Indian Mutiny "should have completed their 21 years' service; but "this alone was not sufficient to account for the very "great rise from an average of 391,000*l.* in the first "six years" (1870–71 to 1875–76) "to an average of "810,000*l.* in the next four years, or more than double "the former sum, and to an amount estimated at "920,000*l.* for 1881–82. Part of this increase is due "to measures carried into effect by the British "Government for purposes unconnected with India, "such as the abolition of the purchase system and "consequent grant of pensions to officers, the compulsory retirement of officers on attaining certain "ages, the re-organisation of the Army Medical Department, and other steps, which, by compelling "India at once to become liable for the capital value "of such pensions, so far as they are due for service in "that country, hinders the non-effective charge "from falling in the manner expected when the "arrangement was originally made." The utmost to which the India Office could agree was, simple interest at 4 per cent. from the 1st of April 1880 on the amounts due in respect of 1876–77 to 1879–80; for the three subsequent years "no reports have been rendered, and "no claim for interest can be recognised. From "the 1st of April 1883 the amounts which may then "be due, including estimates for the years on account "of which reports have not been rendered, will be "added together; and to these will be added on each "subsequent 1st of April the amounts estimated for "the year just closed. Against these will be set the "payments made from time to time by this office; and "the necessary corrections of the estimates will be "made in respect of each year when the actuaries' "reports shall be received. Interest at 4 per cent. "will be added to the outstanding balance at the close "of the year. The sum thus ascertained to be due, "including the amounts in respect of future years, "will be repaid by the Secretary of State in Council "as rapidly as possible consistently with keeping the "payments to the Treasury at a fairly uniform rate."

Parliamentary Paper 342 of 1878, page 27. 131. This letter having been forwarded to the Government of India, with a request that they would see whether it might not be possible to make a further remittance in order to pay off part of the arrears, they replied on the 10th of August 1883, reviewing the whole of the past correspondence. Prior to 1861 the payment Page 33. was 60,000*l.* a year, from 1861–62 to 1869–70 it was a capitation rate of 3*l.* 10*s.*, which on the nine years averaged 225,000*l.* From 1870–71 to 1883–84 the Page 41. payment of the capitalised value had on the 14 years Page 42. averaged, including unpaid arrears, 669,000*l.* If interest on those arrears were to be charged, the Treasury ought to pay interest in connexion with the Perak and Abyssinian payments. Moreover, the Crown Page 43. Colonies pay nothing towards the non-effective charges. "A fair settlement of the question would be that the "Treasury should remit such a portion of the arrears "as will bring them down on 1st April 1883 to "1,500,000*l.* We, on the other hand, would undertake "to pay the whole of this amount by 1st April 1885." No exception was taken to compound interest being charged on arrears after 1st April 1883.

132. As to the future, the Government of India held that the system ought to be changed, owing to its uncertainty; "if, in addition to the very considerable Page 45. "difficulties which already attend the administration "of the Indian finances, we are to have hanging over "our heads vague and uncertain demands for large "sums of money by the English Treasury, it is Page 46. "impossible to conduct the financial administration "of India with any degree of confidence." But, further, "we maintain that the system itself is unjust." "It pre-supposes that there is a partnership between "the two countries; and so to a certain extent there "is, but there is no freedom of contract. It is a "partnership in which the rich and powerful partner "is able to prescribe the conditions under which the "business shall be carried on, with very little reference "to the wishes or the means of the poorer and weaker "partner. . . . The argument as regards the "abolition of the purchase-system appears to us to be "particularly strong; that system existed in England "from the days of William III.; it was a system with "which India was but little concerned until the Crown "took over the direct government of the country. It "certainly appears to us exceedingly unjust that the "Indian revenues should be called upon to bear any "charge in order to get rid of this peculiarly English "abuse. . . . Even in respect to those reforms "which may be said to have increased the efficiency of "the Indian, equally with that of the English Army, "the position of India is very disadvantageous." In the regulation of such matters the Indian authorities have scarcely any voice, "even although the execution "of those reforms may have resulted in considerable "burdens being thrown upon Indian revenues." "The Page 47. "military requirements of England and of India are "so different that it is impossible that there should be "any true partnership," as instanced in the case of Page 48. short service. They accordingly renewed the proposal made in 1878, that the total payment for effective and non-effective services should be settled by a capitation rate, the arrangement being embodied in an Act of Parliament. Meantime they recommend that the capital payments should be spread over 12 years, and a payment be made of about 700,000*l.* a year. Page 49.

133. This letter was forwarded to the Treasury on the 4th of October 1883, Lord Kimberley saying that, in view of the report of the Committee of 1870, he Page 52. could not support the proposal to revert to a capitation rate or annual fixed payment, but pressing for a speedy reply to the letter of the 2nd March 1883. No answer Page 53. being received, he, on the 23rd February 1884 tendered 1,000,000*l.* on account of the arrears, discharging those for 1876–77, 1877–78, and 1878–79, and nearly the whole of that for 1879–80.

134. On the 4th of March 1884 the Treasury wrote Page 54. "that they find that the British Exchequer loses so "heavily by" the arrangement for India's paying the capitalised share of the pensions, "that they have "decided, in concert with the Secretary of State for "War, to withdraw from it from the 1st of April next." They accordingly proposed that for the future the pensions should be paid half-yearly, as they fell due, and that as to the past the arrear should be converted into annuity for eight or ten years. As to the amount so to be treated, they proposed, as a compromise, to take the mean between the amount stated by the War Office actuaries, and that admitted by the Secretary of

Despatch to India, 22nd Jan. 1885, No. 18 F.

State in Council. With certain corrections, this left the arrear at charge on the 1st of April 1884, something under a million sterling, which amount, owing to the alteration of the system of payment, which Lord Kimberley accepted, India was able to discharge in the course of 1885–86.

Letter from India, 11th July 1884, No. 220 F.

135. In closing the discussion, the Government of India placed on record once more their "strong sense "of the inequitable nature of the present arrangement. ". . . If the interests of India were equally con- "sidered with those of England in all questions "affecting the organisation and cost of the British "Army, and if India had an equal voice with England "in deciding whether changes in organisation involving "increase of expenditure should be made, it would be "perfectly fair that the cost of the British Army "should be divided in the arithmetical proportion of "service in India to service out of India. Neither of "these conditions is fulfilled in practice; changes are "made, and reforms introduced, with reference rather "to the wants of England than of India. We are, "therefore, of opinion that it is unfair to India to "require her to pay for changes in organisation which "are carried out quite independently of her, in regard "to which the authorities responsible for Indian "finance may not even have been consulted, which "may not in any degree strengthen the military "position of India, or finally may not confer on India "advantages commensurate with the cost." With regard to the claim of the Treasury for interest, the Government of India had already objected to such a claim "made without warning and in opposition to "previous practice"; and they greatly regretted that the Secretary of State had not lent the weight of his authority in support of their arguments, and of their "counter-claim in connexion with the advances for the "expeditions to Perak and Abyssinia." Referring to the representations made by Lord Lytton's Government in 1878, and repeated in 1883, they said, "It is a matter "of deep regret to us that our suggestions regarding "a question of such importance to the finances of India "should apparently have so little commended them- "selves to your Lordship's judgment. That this must "be so, we are led to infer from the fact that they "were not pressed upon the English Treasury, and "that your Lordship has not deemed it necessary to "discuss with us the arguments on which our proposals "were based. So long as these arguments are un- "answered, we must respectively adhere to our opinion "that the question 'is one to be decided, not by the "'mere rules of arithmetic, but on broad and states- "'manlike views of public policy which shall fairly "'adjust the claims of England to the capacities of "'India,' and we trust that, when your Lordship may "consider the time opportune for the disposal of this "question, you will press upon Her Majesty's Govern- "ment the views which we have considered it our duty "to lay before your Lordship, and endeavour to obtain "that guarantee of stability which can only be given "by an Act of Parliament. . . . It is not to the "advantage of India that 'the amount of these "charges' should be left to be regulated depart- "mentally between the Secretary of State for India, "the Treasury, and the War Office.

Despatch to India, 25th Sept. 1884, No. 305 F.

136. Lord Kimberley replied that "in 1878 a strong "effort was made to revert to the principle of a "capitation rate, but it was rejected by the Treasury; "and I am unable to see any advantage in again "attempting to recur to a plan previously tried and "abandoned. The difficulty of ascertaining an "equitable capitation rate is apparent from the "inability of Lord Northbrook's Commission as yet "to recommend a rate for the effective services; and, "if a lump sum were agreed upon, it is clear that con- "tinued discussions would arise as to the strength on "which that sum was based having been duly main- "tained. . . . By the existing plan much risk of "controversy is removed. . . . It having been "decided, after the assumption of the direct Govern- "ment of India by Her Majesty, that a local European "force should no longer be maintained, and that the "European Army of India should thenceforward be a "portion of the general forces of the Crown, it follows, "as a necessary consequence, that the British troops "employed in India shall, in respect of the period of "their service there, be entitled to equal privileges "of a general character with those employed elsewhere, "whether in regard to pay or pension. And, just as "India pays the effective charges of the troops while "serving in that country, so she must be liable for "the non-effective charges in respect of those troops "for that period. It is true that occasionally the "Secretary of State in Council has deemed it necessary "to object to particular measures as bringing an "unnecessary burden on the finances of India. Any "decisions, however, of Her Majesty's Government, "increasing the pecuniary advantages of the army, "must be considered not as having reference, as your "Excellency expresses it, to the wants of England "alone, but to the interests of the military defence of "the whole Empire; and I am unable to see on what "ground India, which requires about one-third of the "entire British Army, can complain of being required "to pay her due proportion of the cost. In the words "of the Select Committee of the House of Commons, "which investigated the subject in 1874, 'India, as a "'component part of the Empire, must be prepared "'to share in the cost of a system the expense of "'which may be enhanced for Imperial purposes.' ". . . . No opportunity has been lost by the "representatives of this Office of pressing the claims "of India for consideration on account of the advan- "tages that England derives from the maintenance "of depôts, and from the training of the force in active "operations, as well as on account of the financial "difficulties with which the Government of India has "had to contend." As to the "'counter-claim' in "connexion with the advances for the expeditions "to Perak and Abyssinia, it may be well to remind "your Government that those sums were repaid at "rates of exchange favourable to India." Persistent efforts had been made to convert the charges into annuities, so as to remove the uncertainty respecting the amount to be paid. It had not been necessary to discuss the Government of India's arguments in detail, because it had been shown in 1878 that their views "were based on an erroneous assumption as to the "manner in which the increase of military charge "that led to their representations had arisen."

137. The new system on which the non-effective payments were placed was as follows:—"(1) That the "proper Indian share of the annual payment to each "pensioner, on the basis of past service, should be "ascertained in the same manner as has hitherto been "the practice for the purpose of capitalisation; (2) that "India should be debited for the financial year in the "course of which the retirement occurs, with one-half "of her annual share, reduced by the chance of the "pensioner not living one year; (3) that for subse- "quent years India should pay her original share, "adjusted by the chance of the pensioner being alive "in the year . . . .; (4) that in the case of tem- "porary non-effective pay, such as half-pay, there "should be a countercharge in favour of India from "the year in which the individual reverts to full "pay."

Parliamentary Paper 221 of 1885, page 34.

138. The following sums have been paid for non-effective charges since the Act of 1861 was passed:—

APPENDIX No. 46.

Papers relating to the Indian Contribution on account of the Vessels of the Royal Navy stationed in Indian Waters.

PART I.

I. INDIA OFFICE CASE SUBMITTED TO LORD ROSEBERY WITH ANNEXURES.

II. ADMIRALTY CASE SUBMITTED TO LORD ROSEBERY AND TREASURY ADDITION THERETO.

III. AWARD OF LORD ROSEBERY.

PART II.

CORRESPONDENCE BETWEEN THE ADMIRALTY, TREASURY, AND INDIA OFFICE.

Note.—This correspondence, with the exception of Nos. 66 to 75, was put before Lord Rosebery.

SUB-APPENDICES.

1. Revised Memorandum of Foreign Office Conference dated 26th March 1890.
2. Letter from Government of India dated 25th August 1890.
3. Despatch to Government of India dated 5th February 1891.
4. Memorandum of Accountant-General of Navy dated 28th February 1891.
5. Letter from Government of India dated 13th May 1891.
6. Memorandum of First Lord of the Admiralty dated 28th November 1891.
7. Memorandum of India Office dated 23rd December 1891.
8. Minutes of Committee held at the Admiralty dated 11th and 25th January 1892.
9. Letter from Government of India dated 31st July 1894.
10. Despatch to Government of India dated 20th September 1894.
11. Despatch to Government of India dated 26th June 1895.
12. Memorandum by the Director of the Indian Marine dated February 1896.

Note.—Sub-Appendices 1 to 4 and 6 to 8 were put before Lord Rosebery.

PART I.

i.—India Office Case.

Semi-Official Letter from Lord Rosebery to Mr. Fowler, dated 6th December, 1894.

I have received from the Treasury the papers relating to the questions at issue between the Admiralty and the India Office, which I understand you have agreed to refer to me.

The first question on which a decision seems to me to be required is the precise meaning which is to be attached to the words "for Indian purposes" in the Report of the Conference of 1890; and I shall be glad if you will furnish me with the definition of this phrase as it was understood by your department at that time, together with a concise statement of the grounds on which that understanding was based.

When a decision on this point has been arrived at, it will probably not be difficult for the two departments to settle the number and class of vessels required for the service, and the consequent payment to be made by the Indian Government.

In the event, however, of your failing to agree within a period, say, of two months, I shall be ready myself to undertake the solution of this question also, if you are prepared to accept my decision as final.

Semi-Official Letter from Mr. Fowler to Lord Rosebery, dated 18th December 1894.

On the 16th November I caused a letter to be addressed to the Admiralty, in which the Secretary of State in Council expressed his willingness to lay before you the correspondence about the East Indian Squadron subsidy, "in order that you might consider "what course should be taken to settle the questions "at issue."

Your letter to me of the 6th December contains your decision on this point. You say that you wish, first, to be furnished with certain materials in order that you may decide what is the precise meaning to be attached to the words "for Indian purposes" in the Foreign Office Conference Report, and you add that when this question has been decided the two departments are to try to settle between themselves the number and class of ships required for such purposes, and the consequent payment to be made, and that in the event of their failing to agree within a period of two months you will be ready to undertake the solution of this question also, provided that both departments are prepared to accept your decision as final.

In reply, I have now to say that I agree to this course, and am prepared to accept your decision on these two questions as final.

Our case as to the meaning to be attached to the phrase "Indian purposes" in the Report of the Foreign Office Conference, 1890, will be sent to you in a day or two.

Revised India Office Case.

Naval Squadron in Indian Waters.

Interpretation of the term "Indian purposes" used in the Report of the Foreign Office Conference.

The term "Indian purposes," which is used in the Report of the Foreign Office Conference of 26th March 1890, was understood by the India Office to mean the maritime police of the coast and the repression of piracy and of the local slave trade.

The grounds on which that understanding was based are as follows.

The sentence in which the term is used runs thus:—

"The Indian Government is to be consulted as to the "number and class of ships required in the Persian "Gulf and off the coasts of India for Indian purposes."

The fact of consulting the Indian Government indicates a restriction in the scope of employment of the vessels. The Government of India never have been, nor would be, consulted as to the naval force required for the general defence of India by naval operations, or for the general protection, in Indian waters, of commerce which concerns not only India, but also the United Kingdom and the Colonies.

Again, the words "in the Persian Gulf and off the coasts of India" still more clearly restrict the meaning of the expression in question. Any employment of the squadron for more general purposes would remove the ships from the coasts of India; the localization of the force was therefore incompatible with any intention that it should be employed for such general purposes.

Further on in the report of the Conference it is arranged that "the ships [for which India is to pay] "are not to be employed beyond certain limits to be "agreed upon, except with the consent of the Indian "Government. They will be under the control and order of the Naval Commander-in-Chief, to whom will "be sent the wishes of the Indian Government, with "which it will be his duty to comply." One of the main reasons, in fact, for proposing that India should pay the whole cost of these vessels, effective and non-effective, was that they were to be more at the disposal of that Government than they had hitherto been, a condition which could not be observed if they were liable to be called away for other duties, as to which, even if India were interested, the Indian Government had no sort of control. Obviously it would only be for Indian purposes, as above defined, that the Government of India would have any wishes with which it would be the duty of the admiral to comply. If "Indian purposes" had included the general duties for which the Admiralty contend, these restrictions upon the employment of the ships maintained for those purposes would never have been proposed, much less agreed to.

As a further argument in support of the contention that the portion of the squadron for which India was to pay was designed for local purposes off the coasts of India, and not for the security of Indian commerce generally, reference may be made to the circumstances in which the Government of India originally undertook to pay a portion of the cost of the East Indies Squadron.

It was laid down in 1861, when the abolition of the Indian Navy was under consideration, that the general protection of trade must rest with the British Government, as previously (*see* paragraphs 3 to 5 of the India Office letter to the Treasury of 6th March, 1890, attached).

The Indian Navy was abolished in 1862, that is to say, it was converted into a non-combatant force, now called the Royal Indian Marine. Up to that date, all "Indian purposes" were provided for by the Indian Navy, but under the arrangements made in 1862 the Royal Navy undertook that portion of the duties involved in the expression "Indian purposes" which could not be carried out by a non-combatant force, such as the Indian Marine had become. These duties were, the maritime police of the coast and the repression of piracy and of the local slave trade.

In 1869, however, it was arranged that the crews of ships maintained *for these purposes* should be paid for by India, and, accordingly, that India should pay 70,000*l.* a year, being the cost of the crews of six ships which were to be maintained for those local duties. Of these, three were for service in the Persian Gulf.

In 1887, the Government of India represented that the number might well be reduced to four, one for the Bay of Bengal, one to be stationed at Aden, one (specially constructed for this service) in the Persian Gulf, and one at Bombay, ready for service in the Persian Gulf. This was done, and the subsidy was reduced to 38,500*l.* a year, plus a payment of 5 per cent. a year towards replacement of the cost of the "Sphinx," the vessel in the Persian Gulf. These arrangements were approved by the Admiralty, who were represented on a joint committee which considered the subject.

It was reasonable to suppose that the ships, the whole cost of which India was to pay under the Foreign Office agreement, were to be maintained for the same purposes as those for the crews of which she had previously paid.

For the remaining local duties, such as the transport of troops, the inspection and relief, &c., of lighthouses and light ships, conveyance by sea of the Viceroy and Governors, marine surveys, despatch vessels, and harbour service, a considerable fleet is maintained by the Government of India.

It should also be remembered that as regards local defences, in addition to forts, armaments, and a submarine mining service, India has undertaken liabilities amounting to 60,000*l.* a year for the manning and maintenance of her floating defences, and has provided two turret ships, two gunboats, and seven torpedo boats, from her own funds. These vessels are under the command of the naval Commander-in-Chief; and it is obvious that the effect of this large addition to the squadron, at the expense of India, is to liberate for the protection of commerce a much larger force than would otherwise be available.

In the report of the Foreign Office Conference special reference was made, as a ground for claiming from India the whole cost of the vessels needed for Indian purposes, "to the example of the Australasian "Colonies (which are contributing liberally for the "protection of the floating trade)." But, on referring to the Australasian agreement, it will be found that the colonies were only to contribute towards the cost of the *additional* force needed for the protection of the floating trade in Australasian waters, and that it was expressly provided that no reduction was, in consequence thereof, "to take place in the normal strength "of Her Majesty's Naval Force employed on the "Australian station." For this "normal strength" Australasia never has paid, and does not now pay, anything. She bears, it is true, the expense of an important part of the total cost of the squadron required for *all* purposes, Imperial and local, on that station; but it is equally true that India, if the contention of the India Office is accepted, will bear a no less important part of the cost of the force maintained for *all* purposes on the East India Station.

Such are, briefly, the grounds on which the India Office contend that they were justified in using the words "Indian purposes" in the restricted sense above mentioned.

15th December, 1894.

SUB-APPENDIX.

Extract paragraphs 3–5 of Letter from the INDIA OFFICE to the TREASURY, No. M 1186, dated 6th March, 1890.

3. In 1861 it was represented by the Government of India that the nature of the services required to be performed by vessels of war in the Red Sea and upon the East Coast of Africa had recently been much changed, in consequence of the extension of the foreign slave trade, and the more frequent presence of foreign ships of war. Her Majesty's Government, therefore, considered that, in the future, vessels of the Royal Navy should be employed in those seas instead of vessels of the Indian Navy, and that, as the purposes for which they were employed were Imperial, so their cost should be borne by the Imperial Exchequer.*

4. In 1862 the question again came under the consideration of the Secretary of State, in connexion with the proposed abolition of the Indian Navy, and he then proposed to the Admiralty that, "as regards India, "the general defence, the protection to trade gene-"rally, and the measures for putting down the slave "trade on the eastern coast of Africa, which have "hitherto been performed partly by Her Majesty's "Navy and partly by the Indian Navy, should be "undertaken altogether by Her Majesty's Navy."

The means of local defence, by floating batteries or otherwise, were to be provided by the Government of India. It was also pointed out that at all times there had been several vessels of Her Majesty's Navy in the Indian seas, for the general protection of trade, and at the same time available for any naval services which might be required by the Government of India.

The proposal was at once accepted by the Admiralty, who undertook that Her Majesty's ships should carry out these duties, and instructions were accordingly sent to the Government of India for the abolition of the Indian Navy.†

5. It was, I am to observe, no part of this arrangement that the Admiralty should be relieved at the cost of Indian revenues of any portion of the expense, which they had always borne, of maintaining a naval squadron in Indian waters. On the contrary, when the Government of India proposed in 1861 that a force of ships should be placed at their disposal which should never be withdrawn without their consent, and the cost of which should be defrayed by India, the Secretary of State pointed out the insuperable objections to the proposal, and said that, "as India "cannot be permitted to exercise any control over the "disposition of the Imperial Navy, so she cannot "properly be charged with any portion of its cost."

* These words are taken verbatim from a Despatch written by Sir Charles Wood.

† This arrangement was agreed to by the Admiralty in their Secretary's letter of 12th November 1862. The question of a division of payment was not raised till the year 1869.

SUPPLEMENTARY STATEMENT: INDIA OFFICE CASE.

1. What were the duties of the Indian Navy?

So far as these were *combatant* duties, they are given in a letter from the India Office to the Admiralty of 7th November 1862 (Appendix B), namely, the maritime police of the coast and the repression of piracy and the local slave trade; nothing more. At that time, when the Suez Canal did not exist, and few foreign ships showed themselves in that neighbourhood, the repression of the slave trade on the coast of East Africa was, in view of the Indian administration of Aden, regarded as part of the local slave trade; but when foreign ships began to appear in these waters, it was recognised that it had become an Imperial duty and was taken over by the Imperial Government. See India Office letter of 7th November (Appendix B), and the Admiralty reply of 12th November 1862 (Appendix C).

2. Did the Admiralty in 1862 clearly accept the *cost* of the duties?

It will be seen that the India Office letter of 7th November 1862 gave the opinion of the Secretary of State as to the duties which should be performed by Her Majesty's ships, and the Admiralty in their reply of 12th November agreed that they should be so performed. As nothing was said, nor any reservation made, as to a contribution by India, and as the result of the agreement was that for seven years the whole cost was borne by the Imperial Government, we maintain that the Admiralty did in fact accept the whole cost of discharging these duties. Moreover, in 1870 the Admiralty wrote, 8th August . . . "After the "abolition of the Indian Navy the Admiralty under-"took in 1862, *without payment*, to perform duties "which had hitherto been jointly carried out by the "Royal Navy and vessels of the Indian Navy." . . .

3. What authority is there for the principle laid down in Sir C. Wood's despatch, that if a ship is employed for Imperial purposes it should be paid for by the Imperial Exchequer?

See letter to Admiralty of 10th October 1862 (Sub-Appendix A). The Admiralty replied (13th October) asking for further information, which was given in the India Office letter of 7th November (Sub-Appendix B). The Admiralty then, 12th November (Sub-Appendix C), undertook to perform the duties as set forth and explained in the letters above mentioned, thereby accepting the principle laid down by Sir C. Wood. It may also be observed, as showing that the principle has been generally accepted,—

(*a.*) that it was only when the Indian Government obtained some control for their own purposes over a portion of the squadron that they were made to contribute to its cost, and

(*b.*) that among the objects of the Conference of 1890 agreed to by the Admiralty we find the following:—

(1.) to place the ships more completely under the control and at the disposal of the Government of India, and

(2.) to arrange that India shall pay their *whole* cost instead of paying only for the pay and provisions, &c., of the crews.

4. For what purposes were the ships, for the crews of which India paid under the agreement of 1869, employed?

Three were detailed for constant and exclusive service in the Persian Gulf and the adjacent waters, and were under the immediate control of the Government of India. The other three were to be at the disposal of the Government of India for their own purposes, "whenever and so far as the requirements of "the Imperial service will permit." (See Sub-Appendix D and E). By these words the Admiralty admit the distinction between Indian and Imperial purposes. And as regards the payment made by India under the

agreement of 1869, it should be observed (1) that, inasmuch as India did not bear the whole cost of the ships (as she will under the new arrangement) but only paid a capitation rate for their crews, she could not expect to have the exclusive use for Indian purposes of all of them; (2) that, if they were removed beyond a certain imaginary line, India ceased to pay for them until they returned. See Admiralty letter dated 30th July 1869 (Sub-Appendix E).

Sub-Appendix A.

Letter to the ADMIRALTY, dated 10th October 1862.

SIR,

I AM directed by the Secretary of State for India to acquaint you, for the information of the Lords Commissioners of the Admiralty, that he has had under his consideration in Council the manner in which the various naval services in the Indian seas can best be performed.

Sir Charles Wood concurs in the general view contained in the letter from the Secretary of the Admiralty to the Under Secretary of State for the Colonies, dated the 24th of January 1857, that—whilst the transport of troops and stores, and the local means of defence, should be provided by local resources—the general naval defence of Her Majesty's possessions abroad, and the protection to trade, can be most advantageously performed by the ships and vessels of Her Majesty's Navy.

He is of opinion, therefore, that, as regards India, the general defence, the protection to trade generally, and the measures for putting down the slave trade on the eastern coast of Africa, which have hitherto been performed partly by Her Majesty's Navy and partly by the Indian Navy, should be undertaken altogether by Her Majesty's Navy.

Sir Charles Wood is the more inclined to this view from the change which has taken place of late years in the character of the slave trade from the eastern coast of Africa, and from the more frequent presence of vessels of the French Navy, both there and in the Red Sea. A French frigate has recently visited the port of Muscat, at the entrance of the Persian Gulf; and Sir Charles Wood is of opinion that it is very desirable that vessels of Her Majesty's Navy should be more frequently seen in those waters. He also would wish to know if the Lords of the Admiralty would be prepared to undertake the duty.

The vessels employed in this part of the Indian seas will have the ready means of repair at the dockyard at Bombay; and the Government of Bombay will be ready to furnish any assistance which may be necessary, in order to enable Her Majesty's ships effectually to perform their duty.

Sir Charles Wood understands that the Lords Commissioners of the Admiralty have already appointed an officer, with the rank of commodore, to take under his orders all the ships and vessels employed in the Indian seas. Sir Charles Wood is of opinion that this is an arrangement most advantageous to Her Majesty's service, and that such officer should be instructed to communicate freely and constantly with the Governments of India and of Bombay, and to meet, as far as in his power, any demands for naval assistance which those Governments may find it necessary to make.

The transport of troops and stores will be provided for by vessels either belonging to, or hired by, the Government of India; and the means of local defence, by floating batteries or otherwise, may be provided in the same way.

Before taking any step, however, Sir Charles Wood is desirous of learning whether the Lords Commissioners of the Admiralty will be prepared to undertake the performance of the duties which, in his opinion, ought to be assigned to Her Majesty's Navy.

I have, &c.

H. MERIVALE.

The Secretary, Admiralty.

Letter from the ADMIRALTY, dated 13th October 1862.

SIR,

HAVING laid before my Lords Commissioners of the Admiralty your letter of the 10th instant, stating that Secretary Sir Charles Wood has had under his consideration in Council the manner in which the various naval services in the Indian seas can be performed, and that he is desirous of knowing whether their Lordships will be prepared to undertake the performance of the duties which, in his opinion, ought to be assigned to Her Majesty's Navy, viz., as regards India, the general defence, and the protection to trade generally, and the measures for putting down the slave trade on the East Coast of Africa, also stating that Sir Charles Wood considers that vessels of Her Majesty's Navy should be more frequently seen in the waters of the Persian Gulf, and wishes to know whether their Lordships would also be prepared to undertake the duty there, I am commanded to acquaint you that, previous to considering the steps to be taken for the protection of the Indian seas, my Lords would be glad to learn from Sir Charles Wood what force, in detail, has been maintained for the various duties to which your letter has reference, and likewise the force which, in the opinion of the Secretary of State, may be considered adequate for the due performance for the future of those duties.

My Lords would also be glad to be furnished with any further information with regard to the nature and extent of the duties which Her Majesty's ships may be called on to perform under the proposed arrangement.

I am, &c.

Herman Merivale, Esq. C. PAGET.

Sub-Appendix B.

Letter to the ADMIRALTY, dated 7th November 1862.

SIR,

I HAVE laid before the Secretary of State for India in Council your letter of the 13th ultimo, requesting information as to the force which has been maintained for the performance of the various naval services on the coasts of India and in the neighbouring seas, referred to in the India Office letter of the 10th ultimo, and what force the Secretary of State for India may deem adequate for the due performance of those duties for the future.

In reply, I am directed to observe that at all times there have been several vessels of Her Majesty's Navy in the Indian seas for the general protection of trade, and to be at the same time available for any naval service which might be required by the Government of India. A considerable squadron of the Royal Navy has always been maintained on what is called "the East India and China Station," and the number of ships and vessels on the coasts of India has varied from time to time according to the known or anticipated requirements of the various posts of that extensive naval station.

So far as the coasts of India are concerned, there has been since the Burmese war little occasion for the services of the Royal Navy vessels, whilst the demand for ships and vessels in other posts of the command has increased. Fewer vessels have consequently been there for some time past than it had been usual to keep there at former periods. During the mutiny in India, Her Majesty's ships "Shannon" and "Pearl" were at Calcutta, and their officers and crews rendered very valuable aid in the field. Sir Charles Wood does not anticipate that any active service is likely to be required from the Royal Navy on the coasts of India, but it is undoubtedly desirable that some of Her Majesty's ships should show themselves from time to time at the different ports in that country.

French frigates and vessels occasionally appear in the Indian waters, and that is done to impress the natives with an idea of the power and influence of France. It is not well for the character of this country that, from the absence of Her Majesty's ships, England should seem to be wanting either in naval force, or in care for those under Her Majesty's dominion.

With regard to the East Coast of Africa and to the slave trade upon that coast, the only naval force there in former years consisted of Arab dhows, and the only slave trade was the domestic slave trade of the Arabs. No foreign vessels of war ever showed themselves there. In these circumstances the little duty required was easily performed by the vessels of the Indian Navy. Now, however, the French have established themselves at Zanzibar and are endeavouring to do the same in the Red Sea, their vessels are frequently there, and it is stated that the slave trade has been carried on under their flag as well as under the Spanish flag supported by them. They are also establishing a line of packets down the Red Sea, and the visits of their vessels of war will probably be now more frequent than heretofore. These circumstances entirely alter the state of the case, and it must be obvious to the Lords Commissioners of the Admiralty that Her Majesty's Navy must

undertake this duty, which may bring them into communication or possible collision with the vessels of war of other European powers.

With regard to the Persian Gulf, the duties there are on a much less scale, principally consisting of the police of the Gulf; that is, preventing the small Arab chiefs from rendering the navigation unsafe by their piratical expeditions. Most of these chiefs are bound by treaty not to engage in any hostilities by sea. The force of the Indian Navy which was generally maintained there has been one or two small sailing vessels and sometimes a steamer.

Opinions have been expressed by merchants that the presence of a steamer moving periodically to and fro would be sufficient protection, and a mail service in the Persian Gulf by steamers has been contracted for, by which this end has been attained, but Sir Charles Wood cannot doubt that the occasional visits of small armed vessels are advisable.

For the purpose of the general naval defence of India and the service on the East Coast of Africa, the number of vessels must vary, as heretofore, according to circumstances, and on this point the Lords Commissioners of the Admiralty must necessarily be the best judges. With regard to the service in the Persian Gulf, and that within the Red Sea, Sir C. Wood is of opinion that probably two small vessels, one to be generally available at Aden and in the Red Sea, and the other for occasional visits to the Persian Gulf, would suffice, or at the most three vessels, so as to provide a reserve in case of necessity.

I have to add that Sir Charles Wood understands that a vessel of the Royal Navy has been sent to the Straits and the coast of Borneo, which has generally been considered as beyond the limits of the Indian waters.

I have, &c.
T. G. BARING.

The Secretary, Admiralty.

Sub-Appendix C.

Letter from the ADMIRALTY, dated 12th November 1862.

SIR,

WITH reference to your letter of the 7th instant, stating the views of Secretary Sir Charles Wood with regard to the duties which Her Majesty's ships would have to perform on the coasts of India, and in the neighbouring seas, for the general protection of trade, &c., I am commanded by my Lords Commissioners of the Admiralty to state, for the information of Sir Charles Wood, that they will undertake for Her Majesty's ships to carry out the various duties as detailed in your letter.

I am, &c.
T. G. Baring, Esq. W. G. ROMAINE.

Sub-Appendix D.

Extract from a Letter from the INDIA OFFICE to the ADMIRALTY, dated 25th February 1869.

* * * *

Their Lordships are aware that the Government of India have recently invited the serious attention of the Secretary of State for India in Council to the want (especially for service in the Persian Gulf, where complications are frequently arising which demand our intervention for the maintenance of the maritime police of these waters) of an adequate naval force, under the control of the Indian Governments and their representatives, for the support of British authority on the seaboard. It was the opinion, both of the Governor-General and of the Governor of Bombay in Council, that the required duties might be most efficiently performed by a special service organised with reference to Indian requirements. Her Majesty's Government, however, after full consideration of this proposal, determined that there were many important reasons which rendered it desirable that the proposed arrangement should not be carried into effect. It remained therefore, to be considered in what manner the required service might be performed by Her Majesty's vessels on the East Indian station. The Lords Commissioners of the Admiralty now suggest that, whilst the entire expense of that part of the squadron employed in the suppression of the slave trade on the East Coast of Africa should be provided for out of Imperial funds, the cost for the maintenance of the ships employed in the Bay of Bengal, the Arabian Gulf, the Persian Gulf, and the Red Sea, should be charged upon the revenues of India, the number of vessels so employed and paid for by India being six (including three detached for service in the Persian Gulf), and the total annual charge, estimated according to a capitation rate of 70*l.* per man for 1,000 men, being 70,000*l.*

With reference to these suggestions, I am instructed to observe that, the object sought to be attained by the Indian Governments being the greater efficiency of the public service by means of increased facilities for the prompt and effectual employment of naval force in the above-mentioned waters, it is of the utmost importance that a distinct understanding should be arrived at with respect to the extent to which the Admiralty vessels so employed are to be subject to the Indian authorities. In the Persian Gulf, and in the neighbouring waters, where embarrassments sometimes arise suddenly and require to be promptly dealt with, it would be necessary, the Duke of Argyll observes, to have vessels always ready for service at the call of the local authorities. In the Bay of Bengal, and in the Red Sea, it might not be necessary to the same extent for the Indian authorities to be enabled promptly to regulate the movements of Her Majesty's vessels; but a general power to call those services when they may be required should be recognised by the Admiralty, and the officers on the station should be instructed to attend to the requisitions made by the Viceroy.

Should these arrangements be put upon such a footing as to secure the desired benefits to India, the Secretary of State for India in Council would not object to the payment, from the revenues of that country, of the annual sum of 70,000*l.* for the naval services offered by the Lords of the Admiralty, in place of the special flotilla recommended by the Government of India.

* * * *

Sub-APPENDIX E.

Extract from a Letter from the ADMIRALTY, dated 30th July, 1869.

With reference to your letter dated the 25th February stating that His Grace the Duke of Argyll had assented to the proposal that a capitation rate of 70*l.* per man should be paid yearly out of Indian funds on account of six of Her Majesty's vessels to be employed in Indian waters in general, three of which would be detailed for constant and exclusive service in the Persian Gulf and the adjacent waters, to be under the immediate control of the Government of India, the other three being also at their disposal, whenever, and so far as, the requirements of the Imperial service will permit, I am commanded by their Lordships to acquaint you, for the information of his Grace, that . . . a fixed sum of 70,000*l.* should be paid yearly out of Indian funds for the above service from a date to be named hereafter, it being understood that no larger sum is at any time to be chargeable against the Indian Government without the previous assent of the Secretary of State for India in Council, and that the Admiralty will bear the whole expense of the wear and tear of the hulls, rigging, machinery, and stores of the ships.

Should any doubt at any time arise on the part of the Indian Government as to the stipulated number of six vessels having been maintained as agreed upon, the Admiralty will consider themselves bound to establish the fact, and a proportionate reduction of the contribution will be made if the number of ships should not have been kept up. . . .

---

ii.—Admiralty Case.

Note.—The correspondence contained in Part II. of the present collection was put before Lord Rosebery by the Treasury, with the exception of Nos. 66 to 75.

Treasury Letter to the Right Hon. the Earl of Rosebery of 14th July 1892.

My Lord,

With reference to the letter from this Department of the 18th ultimo, the Lords Commissioners of Her Majesty's Treasury direct me to submit to your Lordship the enclosed printed papers on behalf of the Imperial Government, with a view to obtaining your decision, as arbitrator, on the following questions connected with the subsidy payable by India for ships of Her Majesty's Navy in Indian waters, viz.:—

1. For what purposes are the ships chargeable to India required?
2. What ought to be the number and class of ships so charged?
3. How ought their cost to be calculated?

The papers consist of:—(*a*) a Memorandum by the First Lord of the Admiralty, dated the 28th November 1891, explaining what the naval contributions of India have hitherto been, and what the present demand upon her is; (*b*) the Minutes of two meetings of an Inter-Departmental Committee held on 11th and 25th January last, which resulted in the present reference to your Lordship; (*c*) a print of correspondence between the Admiralty, India Office, and Treasury, from 5th May 1890 to 4th January last, together with certain Appendices; (*d*) some remarks which my Lords thought it as well to add on each of the three questions submitted to your Lordship.

Some additional papers have, as my Lords understand, been already sent to you by the India Office.

My Lords must apologise for the fragmentary and discursive character of the enclosed papers. The subject is one that cannot be understood without some knowledge of the circumstances under which the late Indian Navy was abolished, and of the subsequent negotiation between the Imperial and Indian Governments, and it is hoped that the papers will afford this knowledge. But my Lords will try to complete them by briefly summarising in this letter the arguments on which the Imperial Government rest their view on each of the three questions.

1. As regards the purposes to be fulfilled by the vessels for which India is called upon to pay. The Imperial Government contend that, as these vessels are to fulfil, in their measure, the purposes formerly fulfilled by the late Indian Navy, these purposes must comprise the general protection of India and her trade, instead of being confined to police duties on her coast. The printed remarks of the Treasury on this head will perhaps make it unnecessary to say more upon it here.

2. The number and class of ships to be paid for by India. The Indian Government wish to reduce these to three, viz.:—

Name of Ship.	Tonnage.	Complement.
"Sphinx" - -	1,130	104
"Pigeon" - - -	755	87
" - - -	755	87
Total - - -	2,640	278

But the Imperial Government, guided by the Admiralty, which is responsible for the efficiency of the Navy in Indian waters, maintain that some more powerful vessels, capable, if need be, of steaming against the monsoon, and at least four in all, are requisite, viz.:—

Name of Ship.	Tonnage.	Complement.
"Marathon" - -	2,950	238
"Brisk" - - -	1,770	194
"Pigeon" - -	755	87
"Sphinx" - - -	1,130	104
Total - -	6,605	623

It is obvious that this little squadron could not do more than serve the purposes of the late Indian Navy, in the Persian Gulf, and off the coasts of India, a much narrower area than was formerly protected by that navy. Nor is it stronger than the force which the Indian Government were pressing the Admiralty to furnish before they thought that India was to pay the whole cost.

3. The mode of calculating the cost to be paid by India.

The Indian Government wish to confine the charge to current maintenance, effective and non-effective, plus 5 per cent. per annum on cost of construction, because this is the charge paid by the Australasian Colonies for the addition to the Australian Squadron. That charge was, however, fixed by Act of Parliament, subject to specified maxima for prime cost and yearly maintenance, both of which fall short of what is actually incurred. It, therefore, cannot justly be regarded as a standard of charge in other cases. The Imperial Government hold that India will not be paying the full cost of the ships unless she makes an annual payment to repay first cost, with 3 per cent. interest, in addition to current maintenance. This will amount for the four ships "Marathon," "Brisk," "Pigeon," and "Sphinx," to £121,736

Less paid direct by India 4,000

Net - - £117,736 per annum.

The Indian method of calculation would give about 10,000*l.* less than that charge.

Further, the Imperial Government, looking to the great advantages derived by India from the presence of the rest of Her Majesty's ships on the East Indies Station, and to the fact that, but for their presence, the ships charged against her could not suffice for the purposes to which they are destined, are strongly of opinion that the contribution should not be subject to any diminution by reason of the accidental absence or disablement of one or more of the particular ships assigned to her. Though based on the exact cost of those ships, the contribution is really a small and imperfect recognition by India of the enormous debt she owes to Her Majesty's Navy for services rendered to her commerce all round the world, as well as for the protection of her coasts.

Your Lordship will observe that a fourth question is alluded to in the papers, viz., the control which India ought to be allowed to have over the ships; but the Imperial Government do not ask for your arbitration upon it, because they understand that the Indian Government are now content with the stipulation in the Minute of the Conference at the Foreign Office of 26th March 1890, that the ships "will be under the "control and orders of the Naval Commander-in-Chief, "to whom will be sent the wishes of the Indian "Government, with which it will be his duty to "comply."

Lastly, the Imperial Government would ask your Lordship to fix the duration of the contribution which you may deem it proper that India should pay. In their own view, the period should be for not less than ten years, provided that no change be made in the number and class of the ships.

I am, &c.
(Signed) R. E. Welby.

Treasury Addition to the Admiralty Case submitted for Lord Rosebery's Arbitration, dated 12th July, 1892.

Indian Squadron Annuity.

My Lords understand that the main questions to be decided by the Arbitrator are: (1) What is the meaning of the term "Indian purposes" in the minute of the Foreign Office Conference of 26th March, 1890;

(2) What number and class of ships are required for fulfilling those purposes; (3) How their cost ought to be calculated. Looking at the case in its financial aspect, they would say a few words on each of these questions, and more particularly on the first.

I.—Meaning of "Indian Purposes."

(a.) *They must be those formerly fulfilled by the abolished Indian Fleet.*

The India Office maintain that these purposes are only the maritime police of the coast, and the repression of piracy and of the local slave trade. They acknowledge that the Indian Navy, abolished on 30th April, 1863, also discharged services connected with general defence and the protection of trade in Indian waters, as well as with the suppression of the slave trade on the East Coast of Africa. But they hold that Her Majesty's Government consented to assume the whole burthen of all these latter services as an Imperial charge in 1863, because they could be rendered more efficiently by ships of the Royal Navy.

No doubt Her Majesty's Government made no claim upon India for a contribution during the negotiations of 1861–62 which resulted in the abolition of the Indian Navy. But this is to be explained by the fact that India was then only just recovering from the shock of the Mutiny, which had added Rx. 42,100,000 to her debt. The abolition of her sea-going fleet, favoured by the Admiralty on strategical grounds, was one of the steps taken in order to restore her finances to an equilibrium, and to have demanded a contribution at once would have gone far to neutralize the advantage of the measure to India. But Her Majesty's Government never intended to permanently transfer the charge of the Indian sea-going fleet to the British taxpayer, without any pecuniary compensation. In the years 1866–68, when Indian finances had thoroughly recovered, the question of reviving a separate Indian fleet was mooted by the Indian Government. The Admiralty opposed the dual administration which this would involve, and at last, on 23rd January, 1869, they wrote to the India Office, that, as the projected revival of the Indian fleet was abandoned. "My Lords would venture "to suggest, for the consideration of his Grace the "Secretary of State, whether the time has not arrived "for adjusting the proportion in which the cost of the "naval squadron on the East Indian Station should "be borne by naval votes, and by the revenues of India.

"The entire expense of that part of the squadron employed in the suppression of slave trade on the East Coast of Africa will be provided for out of Imperial funds; and my Lords would propose that the cost for the maintenance of the ships employed in the Bay of Bengal, the Arabian Gulf, and the Persian Gulf, and the Red Sea, should be charged on the revenues of India, observing that the strength of the squadron will have to be modified to meet the increased duties required to carry out the policy of the Indian Government in the Persian Gulf."

This letter, which resulted in the payment of such contribution as India has hitherto given, seems to my Lords to prove that Her Majesty's Government never adopted the theory that India ought not to pay anything for the protection of her commerce in Indian waters.

My Lords hold, therefore, that the true basis of India's contribution towards the Indian Squadron is the charge which devolved on the Royal Navy through the abolition of the Indian fleet in 1863, and *Indian purposes* must mean the purposes which the fleet used to fulfil.

(b.) *What the Purposes of the abolished Indian Fleet were.*

When the Secretary of State for India first proposed the abolition of the Indian Navy in a letter to the Admiralty of 10th October, 1862, he said, "as regards "India, the general defence, the protection to trade "generally, and the measures for putting down the "slave trade on the eastern coast of Africa, which "have hitherto been performed partly by Her "Majesty's Navy and partly by the Indian Navy, "should be undertaken altogether by Her Majesty's "Navy."

The purposes which formed the subject of transfer between the two navies were, therefore,—

1. General defence.
2. Protection of trade.
3. Suppression of slave trade.

The first two of these purposes seem to be practically one, and may be described as the defence of Indian commerce in Indian waters.

The Indian Marine Budget included several other purposes, viz., coast defence, Indus and Irrawaddy flotillas, Bengal pilot service, transport of troops and stores, but these may be excluded from consideration because they either continue to be discharged by the Indian Marine or are separately paid for by India, and the abolition of the Indian seagoing war navy in no way affected the method of their fulfilment.

(c.) *The Cost of the abolished Indian Fleet.*

For the years 1851 to 1857 the Indian seagoing fleet in Indian waters, viz., the Red Sea, Arabian Sea, Persian Gulf, and Bay of Bengal, seems to have consisted, on the average, of about seven steam frigates, and as many sailing vessels, apart from receiving ships and surveying vessels. But the Indian Mutiny largely added to it. In 1858, eight steam frigates, two steam sloops, three sailing sloops, two sailing schooners, and one sailing brig, with a total burthen of 13,769 tons (old rating), were in commission.

The published accounts do not afford the means of accurately stating the cost of this fleet, but an approximation to it can be arrived at from the ordinary naval charges at Bombay, which seem to have consisted in the main of that cost, exclusive of charges in England. These are shown in the following table, as well as the total of Indian Marine expenses, for the years mentioned:—

Year.	Bombay Naval Charges.	Total Indian Marine Expenditure (including Bombay Naval Charges).	
	Rx.	Rx.	
1855–56	201,885	641,994	Exclusive of Home charges.
1856–57	237,964	666,221	
1857–58	512,633	1,171,706	
1858–59	387,078	1,022,273	Inclusive of Home charges.
1859–60	327,795	1,018,811	
1860–61	358,014	1,070,877	
1861–62	358,714	724,223	
1862–63	325,522	844,003	

It must be remembered that these Indian seagoing ships were manned by white crews, with highly paid and highly pensionable officers, and their maintenance was more costly than that of like ships in the Royal Navy at the time. Lieutenant Low, an opponent of the abolition of the Indian Navy, when advocating the economy of its maintenance, in his history (Vol. II., p. 568), says the average annual cost for the 10 years, 1853–54 to 1862–63, was probably less than Rx. 350,000 per annum, an estimate which derives some corroboration from the foregoing statement of Bombay naval charges. In order to be well within the mark, and to avoid giving too much weight to the mutiny increases, my Lords will suppose that the cost of the seagoing War Navy of India, abolished in 1863, was only Rx. 300,000 per annum.

(d.) *The Proportion borne by that Cost to the proposed Contribution.*

This Rx. 300,000 may be regarded as the yearly premium that India used to pay for the insurance of her trade in Indian waters; for in those days the repression of slave trade on the East Coast of Africa was an insignificant service. The value of her seaborne trade, taking the year to 30th April 1862 as a standard, was Rx. 74,000,000 per annum, and on this India was ready to pay an insurance of about Rx. 4 per 1,000.

Now, however, that Great Britain is bearing the full weight of general defence, protection of trade, and suppression of slave trade in Indian waters, and although Indian trade has risen to Rx. 200,000,000 per

annum, India offers a contribution of only about Rx. 75,000 (50,000*l.*) per annum, or an insurance of less than Rx. 4 per 10,000.*

But this comparison is far from fully bringing out the inadequacy of India's offer, because it takes no account of the immense increase of cost of all naval services since 1863, owing to the increase in speed and strength required of seagoing war vessels.

When the Red Sea, Arabian Sea, Persian Gulf, and Bay of Bengal were left to the almost exclusive charge of the Indian Navy, one station of the Royal Navy sufficed to cover the East Indies, China, and Australia, and two or three British warships at most visited Indian waters, in order to give political rather than naval support to the Indian fleet. In 1862 there were three such ships, with an aggregate burthen of 2,540 tons (old rating), and costing perhaps 50,000*l.* per annum. Now the East Indies and Ceylon, excluding the Red Sea, form a single station, and require a squadron of nine vessels of an aggregate burthen of 16,490 tons (new rating), costing about 300,000*l.* per annum, a force which, but for the possibility of obtaining aid from other stations, would be insufficient for its purpose. Towards the cost of this squadron the Admiralty are asking for a contribution of much less than half cost. Some charge ought properly to be made for the Red Sea, but as it now belongs to the Mediterranean Station, it is perhaps difficult to calculate the cost of its naval safe-guarding.

Taking the gross Admiralty claim for the Indian Squadron at 121,736*l.*, or Rx. 180,000, and adding India's payment of 60,000*l.*, or say Rx. 90,000 for the coast flotilla, a total of Rx. 270,000 is reached, or Rx. 30,000 less than the assumed saving by the abolition of the Indian fleet.

II.—Number and Class of Ships required.

My Lords hold that the Admiralty alone are competent to say what ought to be the number and class of the ships required for Indian purposes. It is true that under the Minute of the Foreign Office Conference the Indian Government is to be consulted on the subject; but the reasons which make it inexpedient that a separate Indian fleet should be revived seem to tell as strongly in favour of the acceptance by that Government of the skilled judgment of the Department which is solely responsible for the naval defence of India and her commerce. It would be unfair of India to throw the whole of this responsibility upon the Admiralty, and yet refuse to allow the Admiralty to judge of the means by which their responsibility is to be discharged.

My Lords, indeed, find it difficult to believe that the purposes formerly fulfilled by the Indian seagoing fleet, even after discarding the East African slave trade and the Red Sea, can be discharged by only four such vessels as the "Marathon," "Brisk," "Pigeon," and "Sphinx," or by those vessels and the coast flotilla† combined; but on such a point they of course unhesitatingly submit their own opinion to that of the Admiralty.

III.—Mode of calculating Cost.

Under the agreement arrived at in March 1890, the charge against India is to take the form of the whole cost, effective and non-effective, of certain ships. My Lords remark that the maximum calculation by the Admiralty of this cost seems very moderate. To compare it with the charge made to the Australasian Colonies for the increase of the Australian squadron is irrelevant, because that charge does not pretend to represent the whole cost of the ships, but is what the Australian Colonies were willing to pay, and Parliament thought it expedient to accept. Theretofore those colonies had paid nothing for the Navy, and it was good policy to encourage them to pay something. India, on the contrary, is in the position of having transferred the whole of her seagoing naval charge to the British taxpayer.

The Admiralty calculation is confined to the direct cost of the ships, such as would be saved to this country if they did not exist. No attempt is made to charge them with a proportionate share of the cost of home dockyards, or of the general administration of the Navy. If the effective seagoing war tonnage afloat and in reserve be regarded as the net product of the whole naval expenditure, it will be found, roughly speaking, that the average cost to the United Kingdom per ton is double the average Admiralty charge to India of about 18*l.* per ton per annum.

Semi-Official Letter from Lord Rosebery to Lord Spencer, dated 6th December, 1894.

I have received from the Treasury the papers relating to the questions at issue between the Admiralty and the India Office, which, I understand, you have agreed to refer to me.

The first question on which a decision seems to me to be required is the precise meaning which is to be attached to the words "for Indian purposes" in the Report of the Conference of 1890; and I shall be glad if you will furnish me with the definition of this phrase as it was understood by your department at that time, together with a concise statement of the grounds on which that understanding was based.

When a decision on this point has been arrived at, it will probably not be difficult for the two departments to settle the number and class of vessels required for the service and the consequent payment to be made by the Indian Government.

In the event, however, of your failing to agree within a period of, say two months, I shall be ready myself to undertake the solution of this question also if you are prepared to accept my decision as final.

Semi-Official Letter from Lord Spencer to Lord Rosebery, dated 14th December, 1894.

In compliance with your letter of the 6th instant, I enclose a brief statement of our definition of the phrase "Indian purposes," as it appears to have been understood at the time of the Conference of 1890.

It is difficult at this time to state with exactitude what was in the minds of our predecessors who took part in the Conference, but I think the statement now enclosed may be taken as representing their views, which are given at length in the printed papers laid before you, and more especially in the Memorandum of Lord G. Hamilton and the Minutes of the Committee held at the Admiralty.

I agree with you in thinking that when a decision upon the definition of this term is given, there ought to be no difficulty in coming to an agreement upon the remaining points at issue between us and the Indian Government.

I need hardly add that we are anxious for this question to be settled before our next year's Estimates take their final shape.

(Enclosure to above letter.)

"Indian Purposes," as regards Ships in Indian Waters.

The Admiralty view of the interpretation to be placed on the words "Indian purposes" is stated in para. 5 of the Minutes of the Committee held at the Admiralty on the 11th January, 1892, viz., that they have a "broader and wider significance" (than that assigned to them by the Indian Representatives in the preceding paragraph) "and that they comprise the general protection of "India, her trade and her coast."

In the preceding paragraph the Indian representatives limited the liability of India to payment only for such vessels as are jointly considered necessary for Indian purposes, viz., for service in the Persian Gulf and off the coasts of India.

As regards the service in the Persian Gulf, there is no dispute. The words "off the coasts of India," are taken by India to mean "police duties performed by small vessels," and not to include any contribution towards the cost of vessels for general defence purposes other than those employed by India for the defence of Indian harbours.

At the same meeting of the Committee a letter from the Treasury of 24th December, 1891, was communicated to the Indian representatives, and may be taken as representing the Admiralty reasons for their view,

---

* In 1862 the sea-borne trade of the United Kingdom was about 455,000,000*l.*, and the naval expenditure 11,000,000*l.*, or nearly 2½ per cent. of the trade. In 1892 the trade may be put at 800,000,000*l.* and the naval expenditure at 16,500,000*l.*, or little over 2 per cent. of the trade.

† The coast flotilla consists of two turret ships, of 2,900 and 3,340 tons respectively, two torpedo gunboats, and seven torpedo boats, of an aggregate burthen of 2,158 tons. It is a stationary squadron devoted to the defence of Indian harbours, and forms the subject of a distinct charge of 60,000*l.* per annum against India, with regard to which there is no dispute. Only one turret ship, one torpedo gunboat, and three torpedo boats are actually in commission.

viz., that, when the British Government took upon itself all the duties formerly discharged by the Indian navy, in the whole Indian Ocean, whether of general defence, of protection of commerce, or of the suppression of the slave trade, the intention was that India should contribute, according to her means, towards all those services, *i.e.*, that all those services are comprised in the term "Indian purposes."

Although the definition "Indian purposes" was apparently first used by the Foreign Office Conference, "Indian purposes" must have existed long before, and it is only reasonable to assume that the Conference, when framing this definition, must have had in their minds the state of affairs existing previously, say from the time of the abolition of the Indian Navy.

The reasons which induced the British Government to waive for some years any claim on India in connection with maritime expenditure, viz.:—the necessity of allowing India time to recover from the financial disturbance caused by the Mutiny, are explained in the Treasury Minute of 12th July, 1892.

When some years later it was agreed that India should make some payment, it was based on an arbitrary number of men, 1,000 at 70*l.* a head, supposed to constitute the crew of six ships. India paid on those numbers so long as there were six ships in Indian waters, without any reference to their actual crews, which, as a matter of fact, were always much less than a thousand. That the services for which the payment was made were not limited to police duties is evident from the fact that the flag ship was allowed to reckon as a ship in Indian waters, for the purposes of the subsidy.

The Admiralty have a fair reason for assuming that the Conference would have so interpreted Indian services from the terms of their conclusion No. 2, viz.: "When that number (*i.e.*, of ships for Indian purposes) has been settled by the British and Indian Governments jointly, it will be arranged that the ships are not to be employed beyond certain limits to be agreed upon, except with the consent of the Indian Government."

It is obvious from this that the ships were not to be "earmarked" for the exclusive use of India for police purposes, but that in addition to those duties they would be available, within agreed limits, for the General Indian Purposes, as interpreted by the Admiralty, including General Defence, Protection of Commerce, &c.

The Admiralty, consequently, in selecting the ships on which the subsidy should be based, had regard to the "requirements of the station as a whole, and the "proportion which the ships, specially selected for "Indian waters (*i.e.*, Indian purposes) should bear to "the full strength of the East Indian squadron"

---

iii.—Lord Rosebery's Award.

10, Downing Street.

When in 1862 India gave up her fleet, that fleet undertook (at a cost of over 300,000*l.* per annum) in conjunction with the Imperial Navy—

1. General defence.
2. Protection of trade.
3. Suppression of slave trade locally or on East Coast of Africa.

[I am aware that the India Office contests this definition of the responsibilities of the old Indian fleet, but the correspondence between the Admiralty and the India Office in 1862 does not appear to me to be susceptible of any other interpretation than that which I have given above.]

As regards the last of these three functions, it may at once be laid down that India should not be called upon to contribute to anything but the suppression of the local slave trade.

As regards the second, it may be admitted that India cannot be asked to undertake the entire protection of her general trade. That she should, however, contribute nothing under any circumstances to that protection, seems to be a proposition difficult to maintain.

The general and effective defence of her own waters, and those of the Burmese Empire, as well as a certain surveillance of the coast of Siam, do certainly fall within her province.

This last is no doubt a new function, but it is entirely bound up with our Indian Empire, its growth and its changed conditions. It is therefore distinctly an Indian purpose.

In consideration of India carrying out these objects in a thoroughly efficient manner, she might be exempted from any further naval responsibility. But I am of opinion that the arrangement now to be made by the two departments should, in the interests of both, be subject to periodical revision at fixed intervals.

My conclusions, therefore, are:—

(1.) That the old Indian Navy did perform or co-operate in the performance of duties more extensive than are now admitted under the expression "Indian purposes," as limited in the India Office case.

(2.) That this expression cannot be limited to merely maritime police and the repression of piracy, but must be held to include some portion, at any rate, of the duties devolving on the Royal Navy for the defence of India and the protection of trade in Indian waters.

(3.) That the transaction of 1862 represented at most a temporary waiver of the claim of the Imperial Government to a contribution from India in respect of the performance of those duties.

(4.) That in any case nothing then said or done could affect the right of the Imperial Government to raise such a claim on its merits at any subsequent period.

(5.) That the basis on which such a contribution should be calculated does not admit of a permanent definition, but should be settled between the Home and Indian Governments from time to time at fixed intervals of, say, 10 years.

PART II.

CORRESPONDENCE between TREASURY, INDIA OFFICE, and ADMIRALTY, relative to the CONTRIBUTION to be paid by INDIA on account of the VESSELS stationed in INDIAN WATERS.

CONTRIBUTION on ACCOUNT of the VESSELS stationed in INDIAN WATERS.

INDEX TO CORRESPONDENCE.

Page.	No.	Letter to, and from, and date.	Subject.
323	1	Treasury to India Office. 6th January 1890. No. 305.	Requesting re-consideration of the question of the annual subsidy, in order that an amount that will cover the cost (76,079*l.*) may be fixed upon.
323	2	India Office to Treasury. 29th January 1890. M. 180.	Asking for a statement showing the grounds on which the sum (76,079*l.*) is based.

			Enclosure to No. 3.
324			Statement showing the estimated annual cost of the four vessels of the Royal Navy in Indian waters.
324	4	India Office to Treasury. 6th March 1890. M. 1186.	In reply to Nos. 1 and 3, History of the present agreement. Since the four ships are not placed at the sole disposal of the Government of India, India should not pay the whole cost.
325	5	Treasury to Admiralty and India Office. 5th May 1890. No. 4998/90.	Encloses copy of Memorandum recording the conclusions arrived at by the Foreign Office Conference of 26th March.
			Enclosure to No. 5. *See* Appendix I.
325	6	India Office to Treasury. 4th June 1890. No. F. 1865.	Concurs in the terms of the agreements as to the China establishments ; but stated that the Government of India must be consulted as to the class and number of ships required for Indian purposes, and as regards the Persian Mission and the Aden and African Establishments.
326	7	Admiralty to Treasury. 5th July 1890. No. M. 1061.	Suggesting a revised paragraph instead of the second paragraph of the Minutes of the Foreign Office Conference.
			Enclosure 1 to No. 7.
326			Minute of the Financial Secretary suggesting that copies of tables (enclosures 2 and 3) be sent to the Treasury.
			Enclosure 2 to No. 7.
326			Statement showing the amounts contributed by India on account of Naval Services.
			Enclosure 3 to No. 7.
326			Statement showing the estimated first cost and annual cost of the four vessels of the Royal Navy in Indian waters.
327	8	Treasury to Admiralty. 15th August 1890. No. 12225/90.	Enclosing copy of a Memorandum, and stating that the India Office has accepted the amendments suggested by the Admiralty and Foreign Office, to the conclusions of the Foreign Office Conference.
			Enclosure to No. 8. *See* Appendix I.
327	9	Treasury to India Office. 30th August 1890. No. 3741/90.	Asking that negotiations should be opened between the Government of India and the Admiralty as to the number and class of ships required, and as to the control of them, on the understanding that India pays the full cost. The reasons of the Treasury for being dissatisfied with the arrangements of the Committee of 1887.
327	10	India Office to Treasury. 20th September 1890. No. M. 7880.	Awaits Mr. Forwood's Memorandum before communicating with the Government of India.
327	11	Treasury to Admiralty. 10th November 1890. No. 16008/90,	Encloses copy of despatch from Government of India. States that only question remaining for settlement is the number and class of the Indian ships.
			Enclosures to No. 11.
			See Appendix 2 and Appendix 1.

Page.	No.	Letter to, and from, and date.	Subject.
328	12	Treasury to India Office. 19th December 1890. No. 18173/90.	Encloses copy of Mr. Forwood's Memorandum (enclosures to No. 7). Points out that the charge against India is very moderate. Will be satisfied with a payment of 41,600*l.* for 1890-91, but it is understood that India will pay the full cost for 1891-92.
			Enclosure to No. 12. *See* Enclosures to No. 7.
328	13	Admiralty to Treasury, 8th Jan. 1891, No. 2, E. 48/66.	Naming the four ships to be allotted to India after 1st April 1891; proposes that India should pay the full cost; the basis upon which the proposed charge is made up; the cases of India and Australia are not analogous (*see* Enclosure 2); proposes to take credit for 117,000*l.* in lieu of the 41,600*l.* included in the Estimates for 1890-91. Present arrangement as to the charge for coal to continue.
			Enclosure 1 to No. 13.
329			Statement of the charge proposed to be made on the Indian Government.
			Enclosure 2 to No. 13.
329			The charge on the basis of the Australasian agreement.
330	14	Admiralty to India Office, 15th Jan. 1891, No. 2, E. 97/141.	Naming the ships to be allotted for the service of India, for which an annual charge of 117,000*l.* is proposed; details showing how this charge has been arrived at; comparison of the cases of India and Australia. Encloses undermentioned statements.
			Enclosures to No. 14. *See* Enclosures No. 1 and 2, in No. 13.
330	15	Treasury to Admiralty, 24th Jan. 1891, No. 457/91.	The Admiralty and India Office must first come to an agreement as to the number and class of ships required before the charge is settled. Compares the two estimates submitted by the Admiralty in July and January (*see* 7 and 13).
331	16	Admiralty to India Office, 31st Jan. 1891, No. 2, E. 168/316.	Proposes that a conference should take place between the two departments on the points in dispute, in view of the early date when the Navy Estimates must be laid before Parliament.
331	17	India Office to Admiralty, 3rd Feb. 1891, No. M. 473.	Can give no undertaking as to the 1891-92 contribution, until an expression of opinion has been received from the Government of India, to whom Mr. Forwood's Memorandum has been forwarded; two of the proposed ships are unsuitable.
331	18	India Office to Admiralty, 3rd Feb. 1891, No. M. 1022.	Acknowledges No. 16, and refers to No. 17.
331	19	Admiralty to Treasury, 6th Feb. 1891, No. 2, E. 234/380.	Mentions the receipt of No. 18; the increased contribution of 117,000*l.* has been inserted in the 1891-92 Estimates. Explains undermentioned enclosure.
			Enclosure to No. 19.
331			Statement showing the distribution over votes of the increased subsidy.
332	20	India Office to Treasury, 3rd Feb. 1891, No. M. 11,519.	Must await the opinion of the Government of India, before any specific contribution can be decided upon.
332	21	Treasury to Admiralty, 14th Feb. 1891, No. 1993/91.	Encloses copy of No. 20. No satisfactory arrangements can be made until the composition and method of calculating the cost of the squadron is mutually agreed upon by a conference.
332	22	Treasury to India Office, 14th Feb. 1891, No. 1993/91.	No satisfactory arrangements can be made until the composition, and method of calculating the cost, of the squadron is mutually agreed upon by a conference.
332	23	India Office to Treasury, 20th Feb. 1891, No. M. 1576/91.	Cannot agree to a conference until the Government of India has expressed an opinion.
332	24	India Office to Admiralty, 5th March 1891, No. M. 2001.	Disclaims all responsibility for the inclusion of the increased subsidy in the Navy Estimates for 1891-92.
333	25	Admiralty to India Office, 6th March 1891, No. M/E. 300.	Proposing that a conference shall take place between the two departments as to the composition and cost of the squadron. Names its proposed representatives.
333	26	India Office to Admiralty, 10th March 1891, No. M. 2283.	Cannot consent to the proposed conference until the opinion of the Government of India has been received.
333	27	Admiralty to India Office, 25th March 1891, No. 2, E. 400/873.	The increased subsidy was included in the Estimates for 1891-92, in accordance with the decisions arrived at by the Foreign Office Conference in March.
333	28	India Office to Admiralty, 1st April 1891, No. M. 2826.	The Secretary of State has already declined to give any undertaking as to the 1891-92 contribution, until the opinion of the Government of India has been received. The vessels upon which the estimate is based are unsuitable.

Page.	No.	Letter to, and from, and date.	Subject.
333	29	Admiralty to India Office, 22nd April 1891, No. 2, E. 530/1104.	Great inconvenience is caused by delaying the settlement of the question; again urges the appointment of a conference.
333	30	India Office to Admiralty, 1st May 1891, No. M. 3815.	Regrets delay (for which the India Office is not responsible); cannot consent to the Conference, until the opinion of the Government of India is received.
334	31	India Office to Admiralty, 16th May 1891, No. M. 4202.	Government of India has telegraphed that only three vessels are required, the "Sphinx," and two of the "Pigeon" type.
334	32	India Office to Admiralty, 25th June 1891, No. M. 4867.	The opinions of the Government of India are expressed in under-mentioned enclosure. The number of vessels for Indian purposes is to be three; India should pay no more than would be claimable under the Australian agreement; the arrangements should hold good for five or ten years, when they should again be reconsidered. India is prepared to pay the full cost of the three vessels from April 1891. The question of control, as settled by the Foreign Office Conference, should still hold good, and no reduction of the East Indian Squadron should be made. Enclosure to No. 32. Despatch from Government of India (*see* Sub-Appendix V.). (Also sent to Treasury.)
334	33	Admiralty to India Office, 17th Nov. 1891, No. 2, E. 951/3041.	Recapitulates the history of the subsidy. Points out that the contribution proposed by India is inadequate, and presses for payment of the subsidy entered in the estimates for 1891–92. Again proposes an inter-departmental conference.
335	34	India Office to Admiralty, 11th Dec. 1891, No. M. 10481.	Disclaims any responsibility (on behalf of the Government of India and the Secretary of State) for the delay, or for the inclusion of the increased subsidy in the 1891–92 Navy estimates. Reviews the action taken by the India Office since the conference of 1890. Sees no reason why the ships selected by India should be unsuitable; India should not be charged with the defence of the floating trade. The Government of India is not willing to pay more than 49,600*l.* per annum for the ships required for purely Indian purposes. Agrees to the proposed conference to discuss the question of the number of vessels only.
336	35	Admiralty to India Office, 14th Dec. 1891, No. E. 2220/91.	Urging that the matters in dispute be referred to an independent arbitrator.
336	36	India Office to Admiralty, 19th Dec. 1891, No. M. 11432.	Cannot consent to an arbitration until a conference shall have failed to come to any agreement upon the points at issue.
336	37	Treasury to Admiralty, 4th Dec. 1891, No. 17,972/91.	An arbitration limited to the question of the number of vessels would be useless, the inquiry should be extended to include the question of what are the services for which the contribution is to be in aid.
336	38	Admiralty to India Office, 30th Dec. 1891, No. 2, E. 2300/3542.	Consenting to a conference, and naming its representatives.
336	39	India Office to Admiralty, 1st Jan. 1892, No. M. 11959.	Nominating its representatives.
337	40	Admiralty to India Office, 4th Jan. 1892, No. 2, E. 19/24.	Appointing representatives and date of meeting.
337	41	India Office to Admiralty, 6th Jan. 1892, No. M. 107.	India Office representatives will be present at appointed time and place.
337	42	Admiralty to Treasury, 3rd Feb. 1892, No. 2, E. 378/372.	The Committee has been unable to agree on the definition of the words "Indian purposes," and recommend that this and the number and class of vessels required be submitted to an independent authority. Enclosure to No. 42. Memorandum recording the proceedings of the Conference (*see* Sub-Appendix 8).
337	43	Treasury to Admiralty and India Office, 10th Feb. 1892, No. 1991/92.	Proposing that the matter be referred to the Prime Minister for arbitration.
337	44	Admiralty to Treasury, 12th Feb. 1892, No. 2, E. 453/473.	Concurs in the Treasury proposal (*see* 43).
337	45	Admiralty to India Office, 17th Feb. 1892, No. 2, E. 506/531.	Proposing to submit certain papers to the arbitrator. Enclosures to No. 45. The foregoing correspondence. Memorandum by First Lord of the Admiralty (Appendix 6). Proceedings of the joint committee (Appendix 8).
337	46	India Office to Treasury, 23rd Feb. 1892, No. M. 1522.	Agrees to refer the matter to arbitration; but reference to be limited to the application of principles already settled by the Foreign Office Conference. Names of suitable arbitrators.

Page.	No.	Letter to, and from, and date.	Subject.
338	47	India Office to Admiralty, 29th Feb. 1892, No. M. 1774.	Proposes to submit certain documents to the arbitrator.
			Enclosure to No. 47.
			India Office Memorandum (Appendix 7). India Office Letter (No. 6). Various other letters (Nos. 1 to 4).
338	48	Admiralty to India Office, 10th March 1892, No. 2, E. 660/757.	No objection to the papers proposed to be submitted by the India Office.
338	49	Admiralty to Treasury, 15th June 1892, No. 2, E. 1596/1800.	The delay in determining the subsidy having been commented upon; wishes to know when a decision may be expected from the arbitrator.
338	50	Treasury to Admiralty, 18th June 1892, No. 9549/92.	Lord Rosebery will act as arbitrator. Papers to be submitted by both the English and Indian Governments.
			Enclosure 1 to No. 50.
338		Treasury to Lord Rosebery, 28th March 1892, No. 5021/92.	Asking him to undertake the arbitration.
			Enclosure 2 to No. 50.
339		Lord Rosebery to Treasury, 4th June 1892.	Undertaking the arbitration.
339	51	Admiralty to Treasury, 6th July 1892, No. 2, E. 1747/2039.	To obviate delay, will add no further paper to the Admiralty case to be submitted.
339	52	Treasury to Admiralty, 14th July 1892, No. 1127/92.	Enclosing correspondence.
			Enclosure 1 to No. 52 (*see* Part I. ii.).
			Treasury to Lord Rosebery, 14th July 1892. Enclosing papers submitted by the Admiralty (*see* Enclosure to No. 45). Summarises the views of the Imperial Government on the question.
			Treasury addition to Admiralty case (*see* Part I. ii.).
			Definition of "Indian purposes"; what the purposes of the abolished Indian fleet were; the cost of the abolished Indian fleet; the proportion borne by that cost to the proposed contribution; number and class of ships required; mode of calculating cost.
339	53	Admiralty to Treasury, 20th Sept. 1892, No. E. 1907/92/2814.	Asking whether Lord Rosebery has submitted his award.
339	54	Treasury to Admiralty, 8th Oct. 1892, No. 15,390/92.	Resignation of Lord Rosebery of the position of arbitrator.
339	55	Admiralty to Treasury, 24th Dec. 1892, No. E. 3133/3887.	Urging the necessity for an immediate decision.
340	56	Treasury to India Office, 26th July 1893, No. 10,825/93.	Questions, as proposed by the three departments, to be referred to the arbitrators. Treasury consider that they should be; "what *should* be meaning of the term 'Indian purposes'"; "what ought to be number and class of ships, &c."; and "how ought their cost to be calculated."
340	57	Admiralty to Treasury. 15th Aug. 1893, No. 2, E. 3133/3093.	Inconvenience caused by the delay in settling the questions in dispute.
340	58	India Office to Treasury, 21st Aug. 1893, No. M. 7086.	Cannot agree to the form of the questions as suggested by the Treasury.
341	59	Treasury to India Office, 14th Oct. 1893, No. 12,919/93.	As to the questions to be referred to the arbitrator.
341	60	Treasury to Admiralty, 14th Oct. 1893, No. 12,919/93.	Forwarding copies of Nos. 56, 58, and 59.
341	61	Admiralty to Treasury, 3rd Nov. 1893, No. 2, E. 2612/4010.	In view of the inconvenience caused by the delay, hopes that the terms of reference (to the arbitrator) will be submitted to the First Lord of the Treasury for his decision.
341	62	Admiralty to India Office, 9th Nov. 1394, No. 2, E. 2771/3532.	Wishes that the correspondence may be submitted to the Prime Minister, in order that it may be decided what steps should be taken to settle the matter.
341	63	India Office to Admiralty, 16th Nov. 1894, No. M. 10,765.	No objection to Admiralty proposal (*see* No. 62).
341	64	Admiralty to Treasury, 21st Nov. 1894, No. 2, E. 2857/3677.	Forwarding copies of Nos. 62 and 63.

Page.	No.	Letter to, and from, and date.	Subject.
342	65	Treasury to Admiralty, 29th Nov. 1894, No. 17,164/94.	The matter has been referred to Lord Rosebery, who will shortly communicate with both departments concerned.
342	66	Admiralty to India Office, 25th Feb. 1895, No. 2, E. 540/610.	Lord Rosebery having decided that "Indian purposes" cannot be limited to merely maritime police, Admiralty assume that the India Office will accept the ships formerly proposed by the Admiralty.
342	67	India Office to Admiralty, 28th March 1895, No. M. 2216.	Is unable to agree to the ships and payment proposed; considers that the Australian agreement should be the basis of calculating the cost; urges the value of the Indian Defence Flotilla, which is a relief to the East Indian Squadron. Proposing "Brisk," "Sphinx," and two gunboats. Proposes an annual payment for 10 years of 82,400*l.*
343	68	Admiralty to India Office, 13th April 1895, No. 2, E. 890.	Urges that a larger ship (the "Marathon") is necessary. Comparison of the Australasian ships and the Australian Squadron and the ships proposed for India (by the Admiralty) and the East Indian Squadron. The agreement cannot be made on the Australian basis. Trusts that the matter may be referred to Lord Rosebery for his final decision, to obviate further delay.
343	69	India Office to Admiralty, 23rd May 1895, No. M. 3680.	The proportion of tonnage of the ships suggested by the Admiralty for Indian purposes to that of the East Indian Squadron. The ships proposed by the Secretary of State. Agrees to pay 90,180*l.* for the ships selected on the Admiralty mode of calculation, and to refer the question of number and class of ships to the Prime Minister if it cannot be otherwise settled. Claims a deduction for the amount spent on repairing the "Sphinx"; the India Office is not responsible for any delay. The increased payment should take effect from 1st April 1895.
344	70	Admiralty to India Office, 30th May 1895, No 2, E. 1395/1689.	The only difference in the ships selected by the Admiralty and India Office is the fourth ship, on one side it is the "Marathon," on the other a gunboat; considers that "Indian purposes" require the larger of the two ships. Puts forward a claim of 268,000*l.* for arrears. Proposes an annual subsidy (from 1st April) of 100,000*l.*, a repayment of 17,000*l.* for arrears, and that the Indian Government should defray the cost of repairing the "Sphinx"; failing concurrence, the Admiralty must lay their whole claim before the Prime Minister.
345	71	India Office to Admiralty, 26th June 1895, No. M. 5224.	Accepting the Admiralty terms, subject to any recommendations of the Royal Commission on Indian Expenditure.
345	72	Admiralty to Treasury, 28th June 1895, No. E. 1636/1995.	Inviting the concurrence of the Treasury in the arrangements mutually agreed upon by the India Office and Admiralty.
346	73	Treasury to Admiralty, 29th June 1895, No. 10,008/95.	Approving of the arrangements.
346	74	Admiralty to India Office, 30th July 1895, No. 2, E. 1673/2345.	Acquainting India Office of Treasury approval.
346	75	Admiralty to India Office, 24th Oct. 1895, No. M. 7623.	Forwarding enclosure.
			Enclosure to No. 75.
		Admiralty to Commander-in-Chief, East Indies, 24th Oct. 1895, No. M. 7,623.	Acquainting him of the arrangements made. He is to comply with the wishes of the Government of India. Limits outside of which the ships must not be employed.

NOTE.

For convenience the Admiralty have furnished a list of the documents in which the main features of the Admiralty case are set forth. They are—

No. 1.

TREASURY LETTER to INDIA OFFICE.

No. 305. Treasury Chambers,
SIR, January 6, 1890.

THE Lords Commissioners of Her Majesty's Treasury direct me to request that you will bring before the Secretary of State for India in Council the subject of the annual subsidy paid by the Indian Government to the Admiralty for the maintenance of a naval force in Indian waters.

From 1869 to 1888 India paid 70,000*l.* per annum for this service in respect of a squadron of six vessels and an assumed force of 1,000 officers and men.

In 1888 my Lords reluctantly agreed to accept 38,500*l.* in addition to certain extra charges for the year 1888-89, in accordance with the recommendation of an Inter-Departmental Committee, which had reported on 26th September 1887, the squadron being reduced to four vessels, carrying about 550 officers and men.

The objection of my Lords to this reduced subsidy was that it did not represent the whole cost of the squadron, and they saw no reason why India should not pay the whole cost. They, therefore, pressed the Admiralty to reconsider the subject, with a view to obtaining an increase of subsidy in succeeding years.

No action for this purpose seems to have been taken by the Admiralty in 1883-89, and in January last my Lords found themselves obliged, through pressure of time, to accept the subsidy of 38,500*l.* for a second year, viz., 1889-90.

From information furnished to my Lords, it would appear that the full cost of maintaining the "Turquoise," "Mariner," "Algerine," and "Sphinx" in Indian waters may be estimated at not less than 76,079*l.* per annum.

I am to state that my Lords will not feel justified in accepting so small a subsidy as 38,500*l.* for any year after 1889-90, and to request you to move the Secretary of State in Council to cause the subject to be reconsidered as soon as possible, in concert with the Admiralty, in order that the subsidy may be fixed at an amount which will cover the actual cost of the squadron.

I am, &c.
The Under Secretary of (Signed) R. E. WELBY.
State for India.

No. 2.

INDIA OFFICE LETTER to TREASURY.

M 180. India Office,
SIR, January 29, 1890.

IN reply to your letter of the 6th January, relating to the subsidy to be paid by the Indian Government on account of the naval squadron in Indian waters, I am directed by the Secretary of State for India in Council to request that he may be supplied with a statement showing, in sufficient detail, the manner in which it is estimated that 76,079*l.* is the amount which should be taken as the annual cost of the four ships on account of which the subsidy is payable.

I have, &c.
The Secretary of the (Signed) HORACE WALPOLE.
Treasury.

No. 3.

TREASURY LETTER to INDIA OFFICE.

No. 1640. Treasury Chambers,
SIR, February 1, 1890.

IN reply to Mr. Walpole's letter of 29th ultimo, respecting the subsidy to be paid by the Indian Government on account of the naval squadron in Indian waters, I am directed by the Lords Commissioners of Her Majesty's Treasury to transmit herewith, for the information of the Secretary of State for India in Council, a copy of a statement supplied by the Board of Admiralty showing how the sum of 76,079*l.*, the estimated annual cost of the four ships, is arrived at.

I am, &c.
The Under Secretary of (Signed) R. E. WELBY.
State for India.

Enclosure.

STATEMENT showing the estimated ANNUAL COST for maintaining the four under-mentioned VESSELS in INDIAN WATERS.

	Estimated Complement.				
	247. "Turquoise."	134. "Mariner."	113. "Algerine."	95. "Sphinx."	589. Total.
	£	£	£	£	£
Pay and allowances	12,122	6,707	5,931	5,536	30,296
Victualling	5,574	2,990	2,522	2,118	13,204

M 1186. India Office,
SIR, March 6, 1890.

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letters quoted in the margin,* regarding the annual subsidy paid by the Indian Government for the maintenance of a naval force in Indian waters.

The Lords Commissioners object to the reduced subsidy, on the ground that it does not represent the whole cost of the squadron, and they see no reason why India should not pay the full cost of maintaining the "Turquoise," "Mariner," "Algerine," and "Sphinx," which is estimated at not less than 76,079*l.* per annum.

You add that the Lords Commissioners will not feel justified in accepting so small a subsidy as 38,500*l.* for any year after 1889-90, and request that the subject may be reconsidered, as soon as possible, in concert with the Admiralty, in order that the subsidy may be fixed at an amount which will cover the actual cost of the squadron.

2. Viscount Cross would have been better able to answer the objections of the Treasury had your letter explained the grounds on which it is held that India should pay the whole cost of the squadron, or why the Lords Commissioners propose to disturb an agreement which has been in force without question for more than 20 years, and which has recently been revised solely to meet the reduction in the number of ships, and in their complement. His Lordship desires me, however, to recapitulate briefly the history of the present agreement, and to explain why he is unable to concur in the proposal made by the Treasury.

3. In 1861 it was represented by the Government of India that the nature of the services required to be performed by vessels of war in the Red Sea and upon the East Coast of Africa had recently been much changed, in consequence of the extension of the foreign slave trade, and the more frequent presence of foreign ships of war. Her Majesty's Government, therefore, considered that, in the future, vessels of the Royal Navy should be employed in those seas instead of vessels of the Indian Navy, and that as the purposes for which they were employed were Imperial, so their cost should be borne by the Imperial Exchequer.

4. In 1862 the question again came under the consideration of the Secretary of State, in connection with the proposed abolition of the Indian Navy, and he then proposed to the Admiralty that, "as regards India, "the general defence, the protection to trade generally, "and the measures for putting down the slave trade "on the eastern coast of Africa, which have hitherto "been performed partly by Her Majesty's Navy and "partly by the Indian Navy, should be undertaken "altogether by Her Majesty's Navy."

The means of local defence, by floating batteries or otherwise, were to be provided by the Government of India. It was also pointed out that at all times there had been several vessels of Her Majesty's Navy in the Indian seas, for the general protection of trade, and at the same time available for any naval services which might be required by the Government of India.

The proposal was at once accepted by the Admiralty, who undertook that Her Majesty's ships should carry out these duties, and instructions were accordingly sent to the Government of India for the abolition of the Indian Navy.

5. It was, I am to observe, no part of this arrangement that the Admiralty should be relieved at the cost of Indian revenues of any portion of the expense, which they had always borne, of maintaining a naval squadron in Indian waters. On the contrary, when the Government of India proposed in 1861 that a force of ships should be placed at their disposal, which should never be withdrawn without their consent, and the cost of which should be defrayed by India, the Secretary of State pointed out the insuperable objections to the proposal, and said that "as India cannot be permitted "to exercise any control over the disposition of the "Imperial Navy, so she cannot properly be charged "with any portion of its cost."

6. This arrangement continued in force till the beginning of the year 1869, when the Admiralty suggested, for the consideration of the Secretary of State, whether the time had not now arrived for adjusting the proportions in which the cost of the naval squadron of the East India station should be borne by naval votes and by the revenues of India. The Lords of the Admiralty proposed that "the entire expense" of that part of the squadron employed in the suppression of the slave trade on the East Coast of Africa should be provided out of Imperial funds, and that "the cost for the maintenance" of the ships employed in the Bay of Bengal, the Arabian Gulf, and the Persian Gulf and the Red Sea should be charged on the revenues of India. The number of men to be provided for by India was estimated at 1,000, to be employed in six vessels, and the annual charge per man for pay, provisions, &c., was calculated at 70*l.*, making a total annual charge of 70,000*l.*

7. I am to request that the attention of the Lords Commissioners may be drawn to the expressions above quoted from the Admiralty letter, which draw a marked distinction between the obligations of the Admiralty, on the one hand, to bear the total charge for certain vessels, and of the Indian Government, on the other, to defray only a portion of the expense of certain other vessels. It is clear that the sum of 70*l.* per man did not represent the whole cost, or anything like the whole cost, of these ships.

* No. 305/90, dated 6th January 1890. No. 1640/90, dated 1st February 1890.

It was also stipulated by the Secretary of State, and agreed to by the Admiralty, that no larger sum (than 70,000*l.*) was "at any time to be chargeable against the "Indian Government without the previous assent of "the Secretary of State for India in Council," and that the Admiralty would bear the whole expense of the wear and tear of the hulls, rigging, machinery, and stores. There were some minor stipulations as to supply of coal, use of Bombay dockyard, &c., which need not be noticed here.

8. This agreement, with slight changes of no great importance, held good till 1887, when, the Government of India having expressed an opinion that the number of vessels composing the squadron might be reduced from six to four, it was agreed, on the report of a joint inter-departmental committee, that the subsidy of 70,000*l.* should be reduced to 38,500*l.*, taking into account the smaller complement of men now required, and that as the "Sphinx," the vessel in the Persian Gulf, was built on special designs exclusively for this service, the Indian Government might fairly be asked to pay a contribution of 5 per cent. per annum on her original cost towards replacement.

9. As already observed, your letter under reply does not explain the grounds on which it is held that India should pay the whole cost of the squadron, but Viscount Cross presumes that this contention is based on the assumption that these vessels are at the disposal of the Indian Government, and that, therefore, the whole cost should be defrayed from Indian revenues. This, however, as will in part be evident from the foregoing history of the agreement, is not the case. The squadron never has been at the disposal of the Government of India.

In the instructions to the senior officer on the East India station, issued by the Admiralty in fulfilment of the agreement of 1869, it is laid down that he is to comply with the requisitions of the authorities in India for naval assistance which it may be in his power to afford, consistently with his opinion of the other requirements of the Service on the station. In the same instructions it is further explained, for the guidance of officers commanding ships, that if compliance by them with such requisitions should, in exceptional cases, interfere with the order of the senior officer, they must look to the relative importance of the services, and exercise their own discretion.

10. On these grounds the Government of India objected to the proposal, and pointed out that, as none of these vessels would be exclusively at their disposal, India would be paying a large sum annually for services from the Royal Navy of no greater extent and value than those engaged to be rendered in 1862 without payment, while they would not be enabled to dispense with any of their armed vessels. They desired, accordingly, to have a small force of vessels from the Royal Navy, to be exclusively under their orders, for which they were prepared to pay. To this proposal the Lords of the Admiralty declined to accede, observing that it would be contrary to all the traditions of the Naval Service, and opposed to its best interests, to delegate the authority which they held from the Crown to India or any other British Colony. After further consideration, the Secretary of State for India in Council decided to adhere to the arrangement which had been accepted provisionally in 1869.

11. This view of the obligation of India to pay only a proportionate share of the expense is further confirmed by the report of the Interdepartmental Committee of 1887.

In paragraph 12 they say, "and it appears that upon "occasions of pressure upon local naval resources, in "connection with Imperial policy in various parts of "the East Indian Station, those which have been doing "duty, under the subsidy agreement, in India waters "and in the Persian Gulf have been withdrawn from "the control of the Indian authorities. The vessels in "the Arabian and Red Seas have frequently been "employed upon Imperial political duties, and in the "suppression of the slave trade under the Egyptian "Convention of 1877; but in this latter case it was "decided that no reduction of the subsidy should "be made, provided the general conditions were "fulfilled.

Again, in paragraph 16 they write, "the duties per-"formed by these vessels are so varied and interwoven "as between the Imperial and Indian Governments "that it is, in our opinion, impracticable to arrive at "any adjustment which can be based upon the actual "extent of employment for each; and in regard to "these vessels, and taking the existing basis, we "recommend that the Indian Government shall "continue to pay at the rate of 70*l.* a man; and, in "addition, the cost of the coal expended in steaming "when the vessels are detached on service, upon the "requisition of the Indian authorities."

As illustrating the unsuitableness, apart from other considerations, of the plan proposed by you for basing the contribution on the cost of four specified ships, I am directed to point out that the "Sphinx" is the only one of the four named in your letter which for the last twelve months has been employed in Indian waters; and that of the other three which should have been there according to the last quarterly return from India, at least one, and that the most powerful, and consequently by far the most expensive, namely, the "Garnet," was so recently as last January removed from Indian waters and employed with the force under Admiral Fremantle, on the East Coast of Africa, in connection with the complications with the Portuguese Government.

12 Viscount Cross is confident that, on this statement of the case, the Lords Commissioners will be satisfied that there are no grounds on which India could justly be required to pay the whole cost of the four ships usually employed in Indian waters, or for disturbing the agreement of 1869, as revised in 1887. His Lordship is prepared to admit that the contention of the Treasury would be only reasonable were the squadron placed at the sole disposal of the Government of India, and under their undivided control, in the same way that the British troops in India are employed under their orders. Such, however, it has been shown is not the case, and in these circumstances the Secretary of State for India in Council is unable to consent to any increase of the present contribution, which he believes represents fairly the proportionate value of the services rendered by the Navy to the Government of India.

His Lordship will, however, at once forward the correspondence to that Government for their opinion, on receipt of which a further communication will be made to you.

I have, &c.,

The Secretary, Treasury. (Signed) A. GODLEY.

No. 5.

TREASURY LETTER to ADMIRALTY and INDIA OFFICE of 5th May 1890, No. 4998 90.

SIR,

I AM directed by the Lords Commissioners of Her Majesty's Treasury to transmit herewith a copy of a *memorandum recording the conclusions arrived at by the conference, held at the Foreign Office on the 26th March last, on the subject of the Indian contribution towards the cost of the China diplomatic and consular establishments, the East Indian squadron, and the Persian mission and consulates respectively, and I am to request that my Lords may be informed whether {the Lords Commissioners of the Admiralty concur / the Secretary of State for India in Council concurs} in the terms of the same.

I am, &c.,

(Signed) R. E. WELBY.

No. 6.

INDIA OFFICE LETTER to TREASURY of 4th June 1890, No. F 1865.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter dated the 5th ultimo, transmitting a memorandum* recording the conclusions arrived at by the conference held at the Foreign Office on the 26th of March last, on the subject of the contribution to be made by the Government of India towards the cost of the Diplomatic and Consular Establishments in China, the squadron of the Royal Navy employed in Indian waters, and the Persian Mission and Consulates; and inquiring whether the Secretary of State in Council concurs in the terms of the memorandum.

In reply, I am desired to say, as regards the contribution to the China establishments, that Viscount Cross in Council agrees to the payment of 12,500*l.* a year for 10 years from the 1st of April 1890, as already intimated in Mr. Walpole's letter to you dated the 30th ultimo.

---

* Sub-Appendix I.

With reference to the payment to be made towards the cost of the East Indian Squadron, Lord Cross is prepared to consult the Government of India respecting the number and class of ships required in the Persian Gulf and off the coasts of India for Indian purposes (which will be wholly at the disposal of the Indian Government), so soon as he shall receive the memorandum which Mr. Forwood has undertaken to prepare on the subject; and he will at the same time inquire what is their opinion respecting the method on which it is proposed that the Indian contribution shall in future be based.

I am, however, to take this opportunity of stating, with reference to the example of the Australasian Colonies, which are (it is parenthetically observed) contributing liberally for the protection of their floating trade, that it would be an entirely new departure to require that India should be charged with any portion of the expense of protecting the floating trade between that country and the United Kingdom or the East, as distinguished from that which must necessarily be incurred in the defence of the shores and dependencies of India.

In respect of the suggestion relating to the Persian mission and the establishments at Aden and on the African Coast, it will be necessary to consult the Government of India. In the meantime the Secretary of State in Council agrees that the payment on account of the mission and consulates in Persia shall remain at the rate of 10,000*l.* a year till the 31st of March 1891, the question of the future contribution being subject to review when the opinion of the Governor General in Council shall have been expressed.

I have, &c.
(Signed) A. GODLEY.

No. 7.

ADMIRALTY LETTER to TREASURY of 5th July 1890, No. M 1061.

SIR,

MY Lords Commissioners of the Admiralty have had under their consideration your letter of the 5th May last, No. 4998, transmitting copy of a *memorandum recording the conclusions arrived at by the conference, held at the Foreign Office on the 26th March last, on the subject of Indian contributions for Imperial services, and requesting the concurrence of my Lords in the terms of the same.

I am desired by my Lords to request that you will inform the Lords Commissioners of the Treasury that they would suggest the substitution of the following for the second paragraph of Conclusion 2 in the said memorandum, viz.:—

> "When that number is settled by the British and Indian Governments jointly, it will be arranged that the ships are not to be employed beyond certain limits to be agreed upon, except with the consent of the Indian Government. They will be under the control and orders of the naval commander-in-chief, to whom will be sent the wishes of the Indian Government, with which it will be his duty to comply. India is to pay the whole cost, effective and non-effective, of them."

I am at the same time directed by my Lords to transmit herewith a minute, dated 29th April last, by the Financial Secretary of the Admiralty, and tables therewith, showing the estimated actual cost to the Imperial exchequer of the ships more particularly detailed for Indian service.

I am, &c.,
(Signed) ARTHUR B. FORWOOD.

(Enclosure 1 in No. 7.)

FINANCIAL SECRETARY'S MINUTE of 29th April 1890.

IN view of the conference on the contribution by India to naval services, held at the Foreign Office, I suggest that copies of the annexed tables be sent to the Treasury as showing the estimated actual cost to the Imperial exchequer of the ships more particularly detailed for Indian service.

(Signed) A. F.

(Enclosure 2 in No. 7.)

Amounts contributed by INDIA on Account of NAVAL SERVICES. (1890–91.)

	£	£
For the service of four vessels to be maintained in Indian waters	38,500	
Percentage on cost of "Sphinx"	3,100	
		*41,600
Estimated cost of repairs of "Sphinx" defrayed by Indian Government		2,500
For expenses of manning the floating defences of Indian harbours		†58,000
For payment at fixed commuted rates for wages, &c., and victuals of crews of the Indian troopships (as representing the actual cost)		‡67,289
		£169,389

* The annual cost of this service is estimated at 103,577*l.* (*see* Statement attached), of which India defrays (as shown above) 44,100*l.*
† Calculated to cover the entire cost of service.

No. 8.

TREASURY LETTER to ADMIRALTY of 15th August, 1890, No. 12225/90.

M 1999/90.

SIR,

WITH reference to your letter of the 5th July last, M/1061, and previous correspondence as to the memorandum of the Conference held at the Foreign Office on the 26th March, on the subject of Indian contributions, I am directed by the Lords Commissioners of Her Majesty's Treasury to transmit herewith copy of a *revised memorandum containing the amendments suggested by the Lords Commissioners of the Admiralty and the Foreign Office, and to state that the same meet with the concurrence of the Secretary of State for India in Council and of my Lords.

I am, &c.,
(Signed) R. E. WELBY.

No. 9.

TREASURY LETTER to INDIA OFFICE of 30th August, 1890, No. 3741/90.

SIR,

THE Lords Commissioners of Her Majesty's Treasury have had before them your letter of the 6th March criticising their proposal that India should, in future, pay the full cost of the naval force maintained in Indian waters, including the Persian Gulf.

The Secretary of State for India in Council is aware that this subject has been considered in the interval at a conference at the Foreign Office, on the 26th March, 1890, between the India Office, Foreign Office, Admiralty, and Treasury; and in accordance with the conclusion then arrived at, my Lords have to request you to move the Secretary of State to open negotiations with the Government of India, and with the Board of Admiralty, in order to arrive at a common agreement as to the number and character of the ships required, and the means by which they can be placed wholly at the disposal of the Indian Government, upon the understanding that India is to pay the full effective and non-effective charge of such ships from 1st April, 1890.

My Lords will add a very brief statement of their reasons for being dissatisfied with the arrangement made by the Committee of 1887:—(1) That Committee estimated the aggregate crews of the four ships employed at 550. They really amount to 589; (2) the Committee estimated the cost of paying and victualling those crews at 70*l.* a head per annum, or a total of 38,500*l.* per annum. The cost is, in fact, 43,500*l.* per annum, or about 74*l.* a head; (3) the charge for pay and victualling bore a much larger proportion to the whole cost of the squadron in 1869, when it was first made the basis of India's payment, than it does now, when the cost of constructing, arming, and equipping vessels has so largely increased; (4) to charge India with a percentage of the original cost of the single vessel in the Persian Gulf, and to charge her nothing of the kind for the other vessels of the squadron, seemed to my Lords unreasonable; (5) to split charges for these vessels, on the ground of divided interests, or occasional absences, appeared inconsistent with the fact that India is not called upon to contribute anything towards the cost of protecting her trade outside Indian waters.

I am, &c.,
(Signed) R. E. WELBY.

No. 10.

INDIA OFFICE LETTER to TREASURY of 20th September, 1890, No. M 7880.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of 30th August, 1890, No. 3741/90, on the subject of the Indian contribution towards the East India Squadron.

2. In reply, I am desired to request that you will inform the Lords Commissioners of Her Majesty's Treasury that Viscount Cross, before communicating with the Government of India, awaits the receipt of the memorandum which it has been arranged that Mr. Forwood shall draw up on the subject.

I have, &c.,
(Signed) O. R. NEWMARCH,
Major-General,
Military Secretary.

No. 11.

TREASURY LETTER to ADMIRALTY of 10th November, 1890, No. 16008/90.

M 2751/90.

SIR,

THE Lords Commissioners of Her Majesty's Treasury direct me, with reference to their letters of the 30th August (3741/90), and 25th September (13983/90) last, to transmit to you, for the observations of the Lords Commissioners of the Admiralty, the enclosed copy of a printed despatch* from the Government of India of the 25th August last, received through the India Office, respecting the Indian contribution towards the East Indian Squadron.

I am also to enclose, for convenience of reference, two more printed copies of the memorandum of the

* Sub-Appendix 1.

* Sub-Appendix 2.

decisions arrived at on this amongst other subjects, at the Foreign Office Conference of the 26th March last.

My Lords would observe that the question whether the whole cost of ships composing the squadron is to be charged to India, or not, appears to have been settled at the Conference in the affirmative. If so, the only question remaining open is that of the number and class of ships required.

No copy of Mr. Forwood's memorandum on this subject, if it has been prepared, has been sent to this department.

I am, &c.
FRANK MOWATT.

No. 12.

TREASURY LETTER to INDIA OFFICE of 19th December, 1890, No. 18173/90.

SIR,

ADVERTING to the letter from this Board of 13th ultimo, respecting a memorandum which, as agreed at the Conference on 26th March last, was to be drawn up by the Financial Secretary to the Admiralty, respecting the Indian contribution towards the East Indian squadron, the Lords Commissioners of Her Majesty's Treasury desire me to say. for the information of the Secretary of State for India in Council, that, through a misapprehension as to the character that would be given to the memorandum, it was overlooked in this department that Mr. Forwood had in fact forwarded it so long ago as on the 5th July last.

I am now to transmit to you a *copy of the document in question, consisting of a prefatory memorandum initialed by Mr. Forwood, and two tables, one showing the actual present cost of the four vessels now composing the squadron, and the other showing the present contributions from India for naval services.

It will be seen that these tables show an actual cost of 103.577*l.* per annum, in respect of which India is contributing only 41,600*l.* (*plus* actual cost of repairing the "Sphinx"). The estimate is very moderate, being only about 17*l.* 10s. per ton for effective, and less than 3*l.* per ton for non-effective charges.

If the whole cost of the Navy at home and abroad be divided by the effective tonnage, it has been calculated to come to about 50*l.* a ton.

The principle that India ought to pay for the whole cost of the squadron was admitted at the Conference, with the proviso that its composition was to be revised, and that arrangements were to be made for securing to India an effective voice in its control, through the medium of the naval authorities.

Looking to the advanced period of the current year, my Lords will be satisfied if the Indian Government will pay to the Admiralty, for 1890-91, the contribution of 41,600*l.* (*plus* cost of repairing the "Sphinx") which was anticipated when the estimates of this year were prepared. But they understand that the full cost of 103,577*l.* will be paid for 1891-92.

I am, &c.
(Signed) R. E. WELBY.

No. 13.

ADMIRALTY LETTER to TREASURY of 8th January, 1891, No. 2 E 48/66.

SIR,

WITH reference to Treasury letters of the 10th November and †19th December last, I am commanded by My Lords Commissioners of the Admiralty to state, for the information of the Lords Commissioners of Her Majesty's Treasury, that, after the 1st April, 1891, the four ships allotted to India will be the "Marathon," "Brisk," "Pigeon," and "Sphinx," of which three are vessels of modern type and high speed.

2 In accordance with the principles agreed to by the Conference at the Foreign Office on the 26th March, 1890, my Lords propose, with the concurrence of their Lordships of the Treasury, that the contribution to be paid by India on their account should represent the whole cost, effective and non-effective.

3. My Lords have accordingly directed me to forward herewith a statement, marked A, of the charge they propose to make on the Indian Government in respect of the services of the vessels employed in the Indian waters. The basis on which the charge is made up is as follows. It is assumed that India is to recoup the full cost of the expenditure involved in providing and maintaining the four vessels which are specially stationed for service in connection with the defence of India. Interest is charged at the rate of three per cent. per annum upon the cost of these vessels, and a sum of 17,868*l.* is charged for the replacement of the vessels within a certain number of years, say 21, and for the armament in 10 years, at the termination of which periods it may reasonably be supposed that they will have become obsolete, and will require to be reinstated by vessels and armaments of the newest type of construction at that period. The calculation is made on the basis of the period for renewal which my Lords apply in their Annual Estimates placed before Parliament to show the depreciation on the fleet generally. The other items are for the estimated annual expenditure and liability, effective and non-effective, incurred in connection with repairs, wages, victuals, reliefs, pensions, and general upkeep of the ships.

4. It should be observed that for the purpose of calculating the sum necessary to be set aside for the replacement or sinking fund, allowance has been made for cumulated interest thereon, at the rate of 3 per cent. per annum, subject to a deduction for the renewal of boilers, which would be required before the expiration of the 21 years to keep the vessels efficient.

5. In the minutes of the Conference, an allusion is made to the arrangement with the Australian Governments for the vessels provided under the Imperial Defence Act

6. This had reference more especially to the l of radius of employment of the special Indian s rather than to the financial terms of the arrangem For the purposes of comparison, I am instructed enclose a memorandum, marked B., showing what amount payable by India would be if the terms w the same as those with Australia. In doing so, howev I am to observe that the circumstances of the two cas are not altogether analogous, and that although n provision was made with the Australasian Colonies fo a sinking or replacement fund, on the other hand th duration of the contract is limited to 10 years, and the rate of interest chargeable on first cost is 5 per cent. instead of 3 per cent., as now proposed. The proposal is based on the principle of India recouping the actual outlay incurred in providing and maintaining the vessels.

7. My Lords propose, with the sanction of their Lordships of the Treasury, to take credit, under the various votes concerned of the Navy Estimates of 1891-92, for the sum of ‡117,000*l.*, as shown in the margin, as an appropriation in aid to be received from the Indian Government on account of ships in Indian waters in lieu of the sum of 41,600*l.* now included in Votes 1, 2, and 8, Section II., of the Navy Estimates for 1890-91.

8. No charge has been inserted for coal, as the present arrangement would, in this respect, continue, viz., that India should pay the entire cost of coal in the Persian Gulf, and the cost of coal consumed in other vessels when on services performed at the request of the Indian authorities. This leaves a considerable charge for coal on Imperial funds.

I am, &c.
(Signed) ARTHUR B. FORWOOD.

No. 14.

ADMIRALTY LETTER to INDIA OFFICE of 15th January 1891, No. 2, E 97/141.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to state, for the information of the Secretary of State for India, that my Lords have had under their consideration the copy of a despatch from the Government of India dated 25th August last, and forwarded in a Treasury letter of 10th November, on the subject of the contribution towards the East Indian squadron.

2. Subsequently to the conference at the Foreign Office of the 26th March last, when it was settled that India should pay the whole cost, effective and non-effective, of the ships specially allotted for service in Indian waters, my Lords caused to be submitted to the Lords Commissioners of Her Majesty's Treasury a statement showing the total estimated cost of the four ships now on the station. This statement, they were informed by the Treasury, had been forwarded to the India Office in Treasury letter of 19th December last.

3. Since that date, with the view of meeting objections which, not only in the despatch before alluded to, but at the conference, were entertained against the ships now on the station, my Lords have arranged to allot, from the 1st April next, for the service and defence of India, in addition to the "Sphinx," specially built for employment in the Persian Gulf, three vessels of modern type and high speed, viz., the "Marathon," "Brisk," and "Pigeon," for which they propose to charge the Indian Government an annual contribution amounting to *117,000*l.*, as shown in the margin, in lieu of the sum of 41,600*l.* now paid.

Details showing how this contribution has been arrived at are given on the statement enclosed, marked A.†

4. In this statement are included:—

(1.) Interest at the rate of 3 per cent. per annum on the first cost of the vessels, with their armaments.

(2.) A sum of 17,860*l.*, being an annual charge towards the replacement of the vessels in 21 years, and of the armaments in 10 years, at the termination of which period it is considered that they will respectively have become obsolete and require replacement.

(3.) The estimated expenditure and liability for repairs, wages, victuals, reliefs, non-effective charges, and general maintenance.

5. As regards (2), I am to observe that the calculation of the annual amount required as a sinking fund for replacement is based on the periods for renewal, which my Lords adopt, to show in their annual estimates placed before Parliament the depreciation of the fleet generally.

There is also included the cost of renewal of boilers required before the expiration of 21 years to keep the vessels in repair, but credit is given for cumulative interest at 3 per cent. per annum.

6. No charge has been inserted for coal, as regards which the present arrangement would continue, viz., that India should pay the entire cost of coal in the Persian Gulf, and of that consumed in the other vessels, when on services performed at the request of the Indian authorities. This leaves a considerable charge for coal to be borne by Imperial funds.

7. I am further to enclose a statement, marked B.,† showing the annual contribution which would be paid by India if the terms were the same as those of an arrangement which exists with the Australasian colonies as regards certain vessels provided under the Imperial Defence Act, and to which allusion is made in the minutes of the conference.

8. While this allusion had reference more especially to the limit of radius of employment of the special Indian ships rather than to the financial terms of the arrangement, I am to observe that the circumstances of the two cases are not altogether analogous, and that, although no provision was made with the Australasian colonies for payment of a sinking or replacement fund, on the other hand the duration of the contract is limited to 10 years, and the rate of interest chargeable on the first cost is 5 per cent. as against 3 per cent. included in the proposed charges against India, which are based on the principle that the latter shall recoup the Imperial Government the actual outlay in providing and maintaining the vessels.

9. My Lords trust that the Secretary of State for India will be able to accept the proposal made in this letter, to which they would be glad to receive an early reply, in view of the approaching presentation to Parliament of the Navy Estimates for 1891–92, in which the contribution to be paid by India will be included as an appropriation in aid.

I am, &c.
(Signed) R. D. AWDRY.

No. 15.

TREASURY LETTER to ADMIRALTY of 24th January 1891, No. 457/91.

E 168/91.

SIR,

THE Lords Commissioners of Her Majesty's Treasury direct me to acknowledge the receipt of your letter of the 8th instant, 2 E 48/66, enclosing, by direction of the Lords Commissioners of the Admiralty, an entirely different estimate of the cost of the British squadron in Indian waters, from that which was sent to the India Office on the 19th ultimo, and had been furnished by the Admiralty on the 5th July last.

My Lords would observe that the difference arises, not merely from a different composition of the squadron, but in some important respects from a different method of calculating cost. It seems to their Lordships that, until the Admiralty have, by personal communication, arrived at a definite understanding with the India Office, both as to how the squadron is to be constituted, and how the cost is to be calculated, it is not desirable to make this department the medium for an interchange of conflicting statements. My Lords believe that the above course has been already suggested by the Chancellor of the Exchequer to the First Lord of the Admiralty, and agreed to by his Lordship.

If my Lords were now to send the statement enclosed in the letter under reply to the India Office in substitution to that sent already, it would be a direct invitation to that office to dispute some items, because the two together show that the Board of Admiralty are still uncertain as to what the cost of a ship really is.

Further, the Board state that after the 1st April next the four ships allotted to India will be the "Marathon," "Brisk," "Pigeon," and "Sphinx," representing an aggregate burthen of 6,605 tons, and complement of 623 officers and men, in lieu of the "Turquoise," "Mariner," "Algerine," and "Sphinx," of 5,055 tons, and 589 complement. But I am to inquire whether, as agreed at the conference of 26th March last, the number and class of ships has been definitely settled between the British and Indian Governments. This was a condition preliminary to the payment by India of the full cost.

My Lords will now contrast a few of the items in the two estimates submitted by the Admiralty in July last and now respectively per ton or per head, as the case may be.

	July Estimate.		Present Estimate.	
	Per Ton.	Per Head.	Per Ton.	Per Head.
	£	£	£	£
Building	55·2	—	48·4	—
Arming	5·6	—	9·8	—
	60·8	—	58·2	—
Waste or renewal:—Hulls	3·3	—	1·8	—
Armament	·3	—	·9	—
Maintenance of machinery, hulls, &c.	2·3	—	3·	—
Pay and allowances	—	51·4	—	52·6
Victualling and consumable stores.	—	22·4	—	24·6
Retired pay, &c.	—	26:	—	23·6

The differences between these figures arise in part from other causes than the different composition of the two squadrons, and confirm the view above expressed

* £
121,000
4,000 — Paid direct by India for repairs of "Sphinx."
117,000

† *See* enclosure to letter 13.

by my Lords, that no agreement is likely to be arrived at unless every particular is carefully discussed by a committee of Admiralty and Indian officers.

I am, &c.
(Signed) R. E. WELBY.

No. 16.

ADMIRALTY LETTER to INDIA OFFICE of 31st January 1891, No. 2 E 168/316.

SIR,

WITH reference to the conference at the Foreign Office on the 26th March last, at which were present, among others, Lord Cross and Mr. Bertram Currie, when a conclusion was arrived at relative to the basis of calculation of the Indian contribution to the East Indian Squadron, and to the Admiralty letter of the 15th January, forwarding a statement of the actual cost of the vessels to be allocated for the service of India in the ensuing financial year, with an increased annual subsidy of 117,000*l.*, I am commanded by my Lords Commissioners of the Admiralty to request that you will inform Lord Cross that, as the Navy estimates for 1891–92 must forthwith be laid before Parliament, it is very important that an immediate settlement of the question should be arrived at.

2. My Lords would therefore propose that a conference should at once take place between representatives of the two departments, with a view of settling any points in dispute, and I am to request that you will move Lord Cross to consent to this course being adopted.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 17.

INDIA OFFICE LETTER to ADMIRALTY of 3rd February, 1891, No. M 473.

E 224/91.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of 15th January, 1891, No. 2, E 97/141, on the subject of the Indian contribution towards the East India Squadron.

In reply, I am desired to point out that, according to the agreement arrived at by the Conference of the 26th March, 1890, the new arrangement under which India was to pay the whole cost, effective and non-effective, of the East India Squadron, was not to come into force until, after receipt of Mr. Forwood's Memorandum, the Government of India had been consulted as to the number and class of ships required, and a decision on this point had been arrived at by the British and Indian Governments.

Mr. Forwood's Memorandum was only forwarded to this office by the Treasury on the 19th December last, and it is now in course of transmission to the Government of India, who have been asked for an early reply.

The despatch of the Government of India of the 25th August last, to which you refer, must not be considered as expressing their final opinion upon the subject, and until that opinion is received the Secretary of State for India in Council can give no undertaking as to the contribution to be paid in 1891–92.

With reference to the vessels which it is stated the Lords Commissioners of the Admiralty have arranged to allot, from 1st April next, for the service and defence of India, in addition to the "Sphinx," Viscount Cross desires me to point out that while the "Pigeon" is one of the vessels mentioned by the Government of India, and therefore suitable for their purpose, the "Marathon" and "Brisk" are far too large and costly, and probably far less suitable for much of the work that has to be done, than gunboats like the "Pigeon" and "Redbreast."

His Lordship also observes from the statements enclosed in your letter that it is proposed to charge India more by 10,177*l.* a year than if the arrangement were analogous to that with Australia, and he desires me to say that he can see no sufficient reason for this difference.

I have, &c.
(Signed) JOHN E. GORST.

No. 18.

INDIA OFFICE LETTER to ADMIRALTY of 3rd February, 1891, No. M 1022.

E 223/91.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of 31st January, 1891, 2 E 168/316, on the subject of the Indian contribution to the East Indian Squadron.

In reply, I am desired to refer you to Sir J. Gorst's letter of this day's date, No. M 473.

I have, &c.
(Signed) O. R. NEWMARCH,
Major-General, Military Secretary.

No. 19.

ADMIRALTY LETTER to TREASURY of 6th February, 1891, No. 2 E 234/380.

SIR,

WITH reference to the Treasury letter of the 24th January, No. 457/91, with respect to the contribution to be paid by India towards the expenses of the British Squadron in Indian waters, I am commanded by My Lords Commissioners of the Admiralty to state, for the information of the Lords Commissioners of Her Majesty's Treasury, that a further letter on the subject has been received from the India Office dated the 3rd February.

In this letter the Secretary of State for India in Council intimates that, pending the receipt of further information from the Indian Government he is as yet unable to give any undertaking as regards the contribution to be paid in the year 1891–92.

Looking at the objections entertained by their Lordships of the Treasury, and shared by my Lords, to the present very inadequate contribution, my Lords have caused to be inserted in the Navy Estimates for 1891–92 the increased contribution proposed in the Admiralty letters of 8th January to the Treasury, and 15th *idem* to the India Office, and have further directed me to enclose a statement showing its distribution over the several Navy votes affected.

With the exception of Vote 1 "Wages," the credits have not been inserted in the votes already submitted for the approval of their Lordships of the Treasury, but the full effect, which is a reduction in the aggregate of 75,400*l.* will appear on the complete copy of the estimates, which my Lords trust will be submitted in the course of a few days.

I am, &c.
(Signed) EVAN MACGREGOR.

Enclosure to No. 19.

DISTRIBUTION over NAVY VOTES, for the year 1891–92, of the proposed increased subsidy for SHIPS in INDIAN WATERS.

Vote.	Service.		Amount.
			£
1	Wages of Officers, Seamen, &c.		32,800
2	Victualling and Clothing		10,600
3	Medical Services		600
8, Sec. I.	Wages—Shipbuilding, Repairs, &c		14,600
8, Sec. II.	Stores—Shipbuilding, Repairs, &c.		12,000
8, Sec. III.	Contract Work—Shipbuilding, Repairs, &c.		15,200
9	Naval Armaments		13,600
11	Miscellaneous Services		2,900
13	Half and Retired Pay		5,000
14	Naval and Widows' Pensions		9,700
			117,000
	Less Amounts included in 1890–91:—		
		£	
1	Wages of Seamen, &c.	28,600	
2	Victualling, &c.	9,900	
8, Sec. II.	Naval Stores (percentage on cost of "Sphinx.")	3,100	
			41,600
	Increased contribution		75,400

No. 20.

INDIA OFFICE LETTER to TREASURY of 3rd February, 1891, No. M 11519.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of the 19th December, 1890, No. 18173/90, enclosing copy of a memorandum by Mr. Forwood, with its accompaniments, regarding the Indian contribution towards the East India Squadron.

2. It is shown that the actual cost of the four vessels now composing the squadron is 103,577*l.*, in respect of which India is contributing only 41,600*l.* (*plus* the actual cost of repairing the "Sphinx").

3. The Lords Commissioners of Her Majesty's Treasury observe that the principle that India ought to pay for the whole of the squadron was admitted at the conference which was held at the Foreign Office on the 26th March, 1890, with proviso as to its composition and control, and they add that they will be satisfied if the Indian Government will pay to the Admiralty, for 1890-91, the contribution of 41,600*l.* (*plus* cost of repairing the "Sphinx") but that they understand that the full cost of 103,577*l.* will be paid for 1891-92.

4. Viscount Cross desires me to point out that the delay in the settlement of this matter has not arisen in this Office. According to the agreement arrived at by the conference of the 26th March, 1890, the new arrangement under which India was to pay the whole cost, effective and non-effective, of the East India Squadron, was not to come into force until, after receipt of Mr. Forwood's Memorandum, the Government of India has been consulted as to the number and class of ships required, and a decision on this point had been arrived at by the British and Indian Governments.

The despatch from the Government of India, of which a copy was sent to you with Mr. Walpole's letter of 5th November, 1890, M 8479, must not be considered as expressing the final opinion of the Government of India on this point, as they had not at that time received the further despatch from the Secretary of State for India, which was to be sent on receipt of Mr. Forwood's Memorandum.

That Memorandum will now be sent out, and the Government of India will be asked for an early reply.

Meanwhile the Secretary of State for India in Council can give no undertaking as to the extent of the contribution to be paid in 1891-92.

I have, &c.
(Signed) JOHN E. GORST.

No. 21.

TREASURY LETTER to ADMIRALTY of 14th February, 1891, No. 1993/91.

E 300/91.

SIR,

THE Lords Commissioners of Her Majesty's Treasury desire me, with reference to their letter of the 24th ultimo, and to yours of the 6th instant, to transmit to you the enclosed copy of a letter* from the India Office, of 3rd instant, respecting the Indian contribution for the East India Squadron for 1891-92, and to state for the information of the Lords Commissioners of the Admiralty that it confirms the view of this Board that no satisfactory arrangement can be arrived at regarding this contribution, unless a personal conference be forthwith held between representatives of the Indian Government and of the Admiralty, who will agree upon:—

1. The composition of the squadron;
2. The method of calculating its annual cost.

My Lords hope that the Board of Admiralty will place their department in direct communication with the India Office as soon as possible, with a view to making such an arrangement.

I am, &c.
(Signed) R. E. WELBY.

---

* No. 20.

No. 22.

TREASURY LETTER to INDIA OFFICE of 14th February 1891, No. 1993/91.

SIR,

IN reply to your letter of the 3rd instant, respecting the Indian contribution for the East India Squadron for 1891-2, the Lords Commissioners of Her Majesty's Treasury desire me to say, for the information of the Secretary of State for India in Council, that subsequently to the Treasury letter of 19th December last, my Lords received from the Admiralty a notification that, after the 1st April 1891, the squadron would be composed of fresh vessels, and an estimate of their cost (121,094*l.* per annum) framed in a somewhat different manner from the estimate enclosed in the Treasury letter of 19th December last.

My Lords are of opinion that until some agreement had been arrived at between that department and the Indian Government as to the composition of the squadron and the manner of calculating its cost, no trustworthy estimate can be made; my Lords accordingly suggested that a conference should forthwith be held between representatives of the Indian Government and the Admiralty, for the purpose of arriving at an agreement on these points.

My Lords have now communicated your present letter to the Admiralty and repeated their suggestion, and they hope that the Secretary of State in Council will concur in its adoption.

I am, &c.
(Signed) R. E. WELBY.

No. 23.

INDIA OFFICE LETTER to TREASURY of 20th February 1891, No. M 1576/91.

SIR,

I AM directed to acknowledge the receipt of your letter of 14th February 1891, No. 1993/91, and to acquaint you in reply that the Lords of the Admiralty, in a letter of the 31st January 1891, had already suggested that a conference should be held between representatives of the department and of the India Office, to discuss questions relating to the payment for the East India Squadron.

2. Viscount Cross, however, thought it desirable that the opinion of the Government of India as to the number and class of ships required should be awaited before entering on any discussion of the calculation of their cost.

3. His Lordship is still of the same opinion, and regrets that he is unable to concur in the adoption of the suggestions that the conference should now take place. He will take steps to procure the opinion of the Government of India as early as possible.

I have, &c.
(Signed) O. R. NEWMARCH,
Major-General,
Military Secretary.

No. 24.

INDIA OFFICE LETTER to ADMIRALTY of 5th March, 1891, No. M 2001.

E 400/91.

SIR,

WITH reference to this Office letter of the 3rd February, 1891, M 1022, I am directed to acquaint you, for the information of the Lords Commissioners of the Admiralty, that Viscount Cross has noticed the fact that, in the Navy Estimates for 1891-92, an addition of 75,400*l.* has been made to the Appropriations in Aid, "being the difference between the partial "cost hitherto borne by the Indian Government of "vessels stationed in Indian waters, and the full cost "of certain vessels which it is proposed shall hereafter "be paid by that Government."

In view of the previous correspondence, and to obviate the risk of possible misapprehension, his Lordship thinks it necessary to disclaim any responsibility for the inclusion of the increased amount in the Estimates of 1891-92, and to observe that, so far as this Office is concerned, no decision has been, or can

be, arrived at pending receipt of the views of the Government of India as to the size and number of ships required.

I have, &c.
(Signed) O. R. NEWMARCH,
Major-General,
Military Secretary.

No. 25.

ADMIRALTY LETTER to INDIA OFFICE of 6th March, 1891, No. M/E 300.

SIR,

WITH reference to previous correspondence on the subject of the Indian contribution for the East India Squadron, I am commanded by my Lords Commissioners of the Admiralty to request that you will state to Viscount Cross that they propose that a meeting shall take place between representatives of the India Office and the Admiralty respecting the composition of the squadron and the method of calculating its annual cost.

My Lords propose to nominate as their representatives—

Admiral Sir Vesey Hamilton, K.C.B., Senior Naval Lord of the Admiralty;
Mr. A. B. Forwood, M.P., Financial Secretary to the Admiralty;
Sir Gerald FitzGerald, K.C.M.G., Accountant-General of the Navy;

and they will be glad to learn, at as early a date as practicable, the names of the gentlemen nominated to represent the India Office.

In view of the great pressure on the time of the Senior Naval Lord of the Admiralty, my Lords would propose that the meeting shall take place at the Admiralty, and they trust the Secretary of State will concur in this course being adopted.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 26.

INDIA OFFICE LETTER to ADMIRALTY of 10th March, 1891, No. M 2283.

M 610/91.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of the 6th March, 1891, No. M-E-300, and in reply to forward herewith, for the information of the Lords Commissioners of the Admiralty, copy of correspondence with the Treasury, from which it will be seen that Viscount Cross is unable to concur in the proposal that a conference should be held between representatives of the Admiralty and the India Office, respecting the composition of the squadron in Indian waters, and the method of calculating its annual cost.

In accordance with the promise made in the letter to the Treasury, the Government of India were asked to telegraph their opinion on these points, and they have replied that they will do so as soon as possible, but that the important points involved require careful consideration.

Viscount Cross considers that until the opinion of the Government of India has been received no advantage would result from the proposed conference.

I have, &c.
(Signed) O. R. NEWMARCH,
Major-General,
Military Secretary.

No. 27.

ADMIRALTY LETTER to INDIA OFFICE of 25th March 1891, No. 2 E 400/873.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to acknowledge the receipt of your letter of the 5th instant, No. M 2001, stating that Viscount Cross thinks it necessary to disclaim any responsibility for an increase of 75,400*l.*, which he has noticed in the appropriations in aid of the Navy Estimates, 1891-92, on account of the contribution payable for vessels stationed in Indian waters.

2. In reply, I am to request that you will be good enough to inform Lord Cross that this increase—intimation of which was furnished in the letter from this Department of the 15th January—was made in accordance with the decision of the conference held at the Foreign Office on the 26th of March last, viz., that the full cost of these vessels, effective and non-effective, should be paid by India.

3. I am to add that my Lords have made arrangements for fulfilling their responsibility to India by supplying vessels of modern type and high speed, full details of which were given in the letter from this Department above quoted.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 28.

INDIA OFFICE LETTER to ADMIRALTY of 1st April 1891, No. M 2826.

E 530/91.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of 25th March 1891, 2 E 400/873, regarding the increase of 75,400*l.* in the appropriations in aid of the Navy Estimates, 1891-92, on account of the contribution payable for vessels stationed in Indian waters.

In reference thereto I am desired to state that in Sir J. Gorst's letter of the 3rd February 1891, M 473, which replied to your letter of the 15th January, you were informed that the Secretary of State for India in Council could give no undertaking as to the contribution to be paid in 1891-92 until the opinion of the Government of India as to the number and class of ships required had been received.

I am desired to add that the estimate given in your letter of the 15th January is based upon the supply of a class of vessels which, as pointed out in Sir J. Gorst's letter, is probably unsuitable for the work to be performed.

I have, &c.
(Signed) O. R. NEWMARCH,
Major-General,
Military Secretary.

No. 29.

ADMIRALTY LETTER to INDIA OFFICE of 22nd April 1891, No. 2 E 530/1104.

SIR,

WITH reference to Major-General Newmarch's letter of the 1st instant, and other correspondence on the subject of the contribution payable for vessels stationed in Indian waters, I am commanded by my Lords Commissioners of the Admiralty to request that you will represent to the Secretary of State for India in Council the great inconvenience caused to my Lords by the delay in the settlement of the question.

I am further, on the part of my Lords, to express the hope that Viscount Cross will now be able to accede to the request for the appointment of a Conference, contained in my letter of the 6th March, 1891, No. M/E 300.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 30.

INDIA OFFICE LETTER to ADMIRALTY of 1st May, 1891, No. M 3815.

E 674/91.

SIR,

ON the receipt of your letter of the 22nd April, 1891, No. 2 E 530/1104, the Government of India were asked by telegram when their report with regard to the Royal Navy subsidy might be expected, and a reply has been received that they hope to be able to send it by an early mail. They have already been asked to telegraph the substance of the despatch. Viscount Cross regrets that inconvenience has been caused to the Lords Commissioners of the Admiralty by the delay in the settlement of this question, but he does not consider that he is in any way responsible for that

delay, and, as stated in my letter of the 10th March, 1891, M 2283, his Lordship thinks that until the opinion of the Government of India has been received no advantage would result from the proposed Conference.

I have, &c.
(Signed) O. R. NEWMARCH,
Major-General,
Military Secretary.

No. 31.

INDIA OFFICE LETTER to ADMIRALTY of 16th May, 1891, No. M 4202.

M 1315/91.

SIR,

IN continuation of this office letter, M 3815, of the 1st May, 1891, I am directed to request you will inform the Lords Commissioners of the Admiralty that a telegram has been received from the Government of India, in which it is stated that only three vessels will be required, the "Sphinx" and two others of the "Pigeon" type, for the Persian Gulf, Aden, and the Bay of Bengal.

On receipt of the despatch on the subject, which, it is stated, will follow, a further communication will be made to you.

(Signed) O. R. NEWMARCH,
Major-General,
Military Secretary.

No. 32.

INDIA OFFICE LETTER to ADMIRALTY of 25th June, 1891, No. M 4867.

M 1747/91.

SIR,

IN continuation of this office letter of the 16th May, 1891, M 4202, I am directed by the Secretary of State for India in Council to forward herewith, for the information of the Lords Commissioners of the Admiralty, copy of a despatch* from the Government of India, conveying their opinion regarding the number and class of vessels to be maintained in Indian waters, the Indian contribution on this account, and the extent to which it is desired that they shall be at the entire disposal of the Government of India.

It is proposed that the number of vessels shall be fixed at three; the "Sphinx" to be stationed, as at present, in the Persian Gulf, and two gunboats of the "Pigeon" class, of which one would ordinarily be at Aden, and the other in the Bay of Bengal.

As regards the charge to be made for these ships, the Secretary of State for India in Council has already pointed out in Sir J. Gorst's letter of the 3rd February, 1891, M 473, that he can see no reason why India should pay more than would be claimable under the Australian agreement, and he concurs with the Government of India that the arrangement now about to be entered into should hold good for five or 10 years only, at the expiration of which it should be reconsidered. Subject to this understanding Viscount Cross is prepared, with effect from the 1st April, 1891, to pay the full cost of the above vessels, effective and non-effective, and including a charge for depreciation. Calculated on the basis of the arrangement with the Australian Colonies, as shown in Table B, attached to Mr. Awdry's letter of the 15th January, 1891, No. 2, E 97/141, the subsidy would be—

	£	£
"Sphinx" - - -	19,339	
Less paid in India - -	4,000	
		15,339
2 Gunboats "Pigeon" class - -		30,226
		£45,565

or in round numbers 45,600*l.* a year. Lastly, as regards the question of control, the Secretary of State for India in Council has nothing to add to the agreement arrived at by the Conference held at the Foreign Office on the 26th March, 1890. The ships for which the subsidy is paid "are not to be employed beyond certain "limits to be agreed upon, except with the consent of "the Indian Government. They will be under the "control and orders of the Naval Commander-in-Chief, "to whom will be sent the wishes of the Indian Go- "vernment, with which it will be his duty to comply." It only remains therefore to fix the above limits.

It is also understood by the Secretary of State for India in Council that, following the principle of the Australian agreement, no reduction will take place in the normal strength of the naval force employed on the East India station. On this point I am to request that the attention of the Lords Commissioners may be invited to the fourth paragraph of Mr. Godley's letter of 4th June, 1890, F 1865.

A copy of the enclosure will be sent to the Treasury.

I have, &c.
(Signed) JOHN E. GORST.

* Sub-Appendix 5.

No. 33.

ADMIRALTY LETTER to INDIA OFFICE of 17th November, 1891, No. 2, E 951/3041.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to request that you will express to the Secretary of State for India their regret at the delay which has occurred in replying to the India Office letter of the 25th June, 1891, No. M 4867, transmitting the copy of a despatch from the Government of India (No. 6 of 13th May, 1891) in connection with the subsidy payable by India for the maintenance of Her Majesty's ships in Indian waters.

The letter, with other papers, was by inadvertence placed on one side, the Senior Naval Lord being anxious to consider more fully the bearing of that portion of the despatch which defined the claim of the Indian Government to control over vessels of the Indian squadron.

There are three points of importance dealt with in your letter under reply and in the despatch of the Indian Government, viz.:—

1. The control to be exercised by India.

My Lords understand that the Secretary of State for India in Council is prepared to adhere to the terms agreed upon by the Foreign Office Conference of 26th March, 1890, and on this understanding will offer no remarks on the subject.

2. The number and class of ships to be allotted to the service of India.

3. The contribution to be paid to the Imperial Exchequer.

On these points the Indian Government have expressed the opinion that in addition to the "Sphinx" they require two ships only and those the smallest on the station.

By this reduction in numbers, the selection of gunboats in lieu of the vessels allotted by the Admiralty, and by adopting the mode of calculation on which the Australasian subsidy has been based, it is proposed in your letter to reduce the annual contribution payable by India (exclusive of the cost of repairs of the "Sphinx" defrayed by India on the spot) from 117,000*l.*, as fixed by the Admiralty, to 45,000*l.*

My Lords would remark that such an arrangement, whilst possibly not absolutely opposed to a literal interpretation of the agreement entered into at the Foreign Office, does not in their judgment represent either its spirit or intention.

The arrangement of 1888, under which India was to pay a reduced subsidy of 41,600*l.* including a charge of 5 per cent. on the cost of the "Sphinx," was strongly objected to by the Treasury as unfair to Imperial Revenues, and a revision of that arrangement was necessary, as it was felt that India did not contribute her legitimate share toward the maintenance of Her Majesty's ships in Indian waters, upon whom has devolved the duties and responsibilities of the old Indian Navy.

On the abolition of that force in 1862 its duties were undertaken by six of Her Majesty's ships, and in 1869 it was agreed that India should pay an annual subsidy of 70,000*l.* representing the cost of the pay and victuals of 1,000 officers and men, assumed to be approximately the number of the crews of those vessels.

By the arrangement of 1888 the number of these ships was reduced to four and the subsidy to 38,500*l.*, calculated at the same rate of 70*l.* a head on an assumed complement of 550 officers and men, together with a further sum of 3,100*l.*, being 5 per cent. on the cost of the "Sphinx," making the total annual payment by India 41,600*l.*

It is to be observed that under neither of these arrangements were any vessels, with the exception of the "Sphinx," specially allotted to India, as is now proposed to be done, the subsidy being payable as long as the agreed number of vessels out of the whole East Indian squadron was present in Indian waters.

As before remarked, this arrangement did not meet with the approval of the Treasury, and as the result of their objections the proposal now under discussion has been made. In this proposal my Lords have endeavoured, and they think with success, to carry out in their entirety the conclusions arrived at by the Foreign Office Conference.

My Lords would remind Lord Cross that the Indian Government, in their Despatch No. 14 of the 29th July, 1887, and more recently in the Despatch No. 117, of the 25th August, 1890, pressed upon the Admiralty the substitution of modern vessels of increased speed and with powerful armaments for the older types then on service in Indian waters and forming part of the East India Squadron. My Lords have spared neither pains nor expense to give effect to these recommendations. The vessels especially objected to in the Despatch of the 25th August, 1890, viz., the "Ranger," "Kingfisher," "Turquoise," and "Garnet," have all been replaced, the East Indian Squadron has been practically reconstituted and now consists almost exclusively of new war vessels.

My Lords cannot help viewing with disappointment and regret the manner in which their endeavours, carried out at an increased cost to the Imperial Exchequer, have been met by the Indian Government.

So far from evincing any disposition to bear a portion of this increase, the Government of India, while reaping the benefit of the greater protection afforded to their commerce by the reconstitution of the squadron, seek to minimise their contribution towards its maintenance by selecting, as a basis for calculating the payment to be made by Indian revenues, the two smallest gunboats in the squadron, and the "Sphinx" which was specially built for Indian service.

My Lords feel sure that, on reconsideration, the Indian Government will recognise the inadequacy of the contribution proposed as a compensation for the advantage derived by India from the presence and protection of H.M. Navy, and they must press for payment of the contribution inserted in the Estimates of the current year.

As the question imperatively calls for settlement in time for the preparation of the Estimates of 1892-93, my Lords have directed me to request you to be good enough to convey to Lord Cross their hope that he will either cause a communication to be addressed to the Indian Government in the sense of this letter, or that he will consent to the Inter-departmental Conference, proposed in Admiralty letter of the 6th March last, being held without further delay.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 34.

INDIA OFFICE LETTER to ADMIRALTY of 11th December, 1891, No. M 10,481.

E 2220/91.

SIR,

I AM directed to acknowledge the receipt of your letter of the 17th November, 1891, No. 2 E 951/3041, relating to the subsidy payable by India for the maintenance of H.M. ships in Indian waters.

Before discussing the proposal made therein, Viscount Cross considers it desirable to place on record that the Government of India and this Office are in no way responsible for the delay which has taken place in settling this question, or for the inclusion in the Admiralty Estimates of the increased contribution proposed by the Admiralty.

According to the agreement arrived at by the Conference of 26th March, 1890, the new arrangement under which India was to pay the whole cost of the East India Squadron, was not to come into force until (after receipt of a memorandum which Mr. Forwood was to prepare) the Government of India should have been consulted as to the number and class of ships required, and a decision on this point should have been arrived at by the British and Indian Governments. Mr. Forwood's memorandum was sent to the Treasury on 5th July, 1890, but owing to a misapprehension in that department it was not forwarded to this office till 19th December, 1890. On its receipt, the Secretary of State in Council lost no time in consulting the Government of India, according to the agreement, and subsequently telegraphed to expedite their deliberations.

In March 1891 Viscount Cross, having noticed that, notwithstanding that no decision on the above points had been arrived at, the Admiralty had added 75,400*l.* to the appropriations in aid in the Navy Estimates for 1891-92, caused a letter to be addressed to the Admiralty disclaiming all responsibility for this increase, and pointing out (what had indeed been expressly stated in this Office letter, M 475 of the 3rd February 1891) that the question had not been and could not be settled pending the receipt of the views of the Government of India as to the size and number of the ships required.

The views of the Government of India and of the Secretary of State for India in Council were communicated to you in Sir J. Gorst's letter of the 25th June 1891, and Lord Cross had no reason to believe that those views were not accepted by the Lords Commissioners of the Admiralty as being in accordance with the agreement of the 26th March 1890.

It now appears that through inadvertence this letter was placed on one side in the Admiralty, and it was only on the 17th November 1891 that Lord Cross learned that the Lords of the Admiralty were unable to concur in the proposed arrangement.

In reply to your present letter, I am desired by the Secretary of State for India in Council to observe that, not only as regards the control over the vessels, but on other points also, he is prepared to adhere strictly to the terms agreed upon at the Foreign Office conference of March 26th, 1890; and I am to express his regret that, in the opinion of the Lords Commissioners of the Admiralty, an opinion in which he is unable to concur, the arrangement proposed in Sir J. Gorst's letter of the 25th June 1891 does not represent either the spirit or the intention of the agreement arrived at by that conference. The terms of the agreement are that "the "Indian Government is to be consulted as to the "number and class of ships required in the Persian "Gulf and off the coast of India for Indian purposes." It will be observed that the agreement nowhere either states or implies that in considering this question the Government of India were to have in view the protection of their commerce by the reconstitution of the squadron, as might be inferred from your letter under reply. It was to be settled solely with regard to Indian purposes, that is, the maritime police of the coast, and the repression of piracy and of the local slave trade.

Prior to this agreement, the Government of India have never been consulted as to the class of vessels to form part of the East Indian Squadron, though they have repeatedly pointed out their inefficient condition, the great expense for outfit and repairs which was thus imposed on Indian revenues, and their unsuitability for the requirements of Indian waters. But Viscount Cross observes that when the agreement of 1869 was put into force, the vessels then considered suitable for the service were three small gunboats for the Persian Gulf, and, for service elsewhere, the "Cossack" (1,296 tons), the "Bullfinch" (663 tons), and the "Lynx" (464 tons). His Lordship therefore can see no reason why the Government of India should not select the "Sphinx" (1,130 tons) and two gunboats of the "Pigeon" class (775 tons) as sufficient for Indian purposes. They expressly state that ships of the size of the "Marathon" (2,950 tons) and "Brisk" (1,770 tons) are not adapted to their special requirements, and are entirely unsuitable for the service of India.

In regard to the question which is raised indirectly in your letter, and to which I have already referred, the protection afforded to Indian commerce by the East Indian Squadron, I am desired to forward, for the information of the Lords Commissioners of the Admiralty, a copy of Mr. Godley's letter to the Treasury of 4th June 1890, F 1865, from which they will observe that the Secretary of State for India in Council distinctly guarded against any suggestion that India should be charged with any portion of the expense of protecting the floating trade between that country and the United Kingdom or the East, as distinguished from that which must necessarily be incurred in defending the shores and dependencies of India.

The Government of India have agreed to pay a sum of 59,589*l.* a year for the manning and maintenance of the turret ships, gunboats, and torpedo boats, provided at the expense of India, for the defence of Indian harbours, and are now willing to pay 49,600*l.* a year (inclusive of 4,000*l.* already paid directly for the

"Sphinx") for the maintenance of the small naval force considered necessary for Indian purposes in Indian waters.

More than this amount the Secretary of State for India in Council considers India cannot fairly be called on to pay, and he can hold out no expectation of his agreeing to make the increased contribution which has been inserted in the Navy Estimates as to be received from India in 1891-92. His Lordship has, however, no objection to the appointment of the inter-departmental conference proposed in Admiralty letter of the 6th March last, provided their discussions are limited to the question of the number of vessels required for Indian purposes, a point which, by the terms arranged at the conference, is to be settled by the British and Indian Governments jointly.

I have, &c.
(Signed) A. GODLEY.

No. 35.

ADMIRALTY LETTER to INDIA OFFICE of 14th December 1891, No. E 2220/91.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to acknowledge the receipt of your letter, of 11th instant, M 10,481, respecting the subsidy payable by India for the maintenance of H.M. ships in Indian waters.

In reply, I am to state that my Lords would be glad to bring this controversy to a close, but the limitation proposed by the Secretary of State for India in Council to the discussions of an inter-departmental conference render it highly improbable that any decision could be arrived at, though time would be consumed in their discussions. It is essential that the question in dispute should be soon settled, and my Lords therefore urge that the matters in controversy be at once referred to the arbitration of a third person of authority and experience.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 36.

INDIA OFFICE LETTER to ADMIRALTY of 19th December, 1891, No. M 11432.

E 2300/91.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of 14th December, 1891, E 2220/91, and to acquaint you in reply that his Lordship is willing that the reference to the Inter-Departmental Committee shall include the number and "class" of the vessels required for Indian purposes in Indian waters; but he regrets that he cannot entertain the proposal of a reference to arbitration, unless and until such a committee, having met and considered the subject, shall : to come to any agreement upon the points at issue.

I have, &c.
(Signed) O. R. NEWMARCH,
Major-General,
Military Secretary.

No. 37.

TREASURY LETTER to ADMIRALTY of 24th December, 1891, No. 17972/91.

E 2336/91.

SIR,

THE Lords Commissioners of Her Majesty's Treasury have had before them your letters* of the 17th ultimo, and 15th instant, Numbers 2/F 951/3040, and 2220/91, enclosing copies of correspondence between the Lords Commissioners of the Admiralty and the Secretary of State for India in Council, respecting the contribution to be paid by India on account of Her Majesty's ships stationed in Indian waters and the Persian Gulf.

The conclusion at which this correspondence arrives is that the controversy should be referred to a third person of authority and experience for arbitration, and in this proposal my Lords entirely concur. They would point out, however, that, if the reference is to be limited in the manner indicated in the last paragraph of Mr. Godley's letter of the 11th instant, no useful object can be attained by making it. If the Secretary of State for India in Council premises that, on no consideration, will he agree to the amount of contribution expected by the Admiralty, and announced in the Navy Estimates for 1891-92, and that the only question to be discussed is the number of vessels required *for Indian purposes*, those purposes being defined in a previous part of the letter as the maritime police of the coast, and the repression of piracy, and of the local slave trade, the arbitration will be nugatory.

My Lords are most anxious for the arbitration, if it be extended to the question of what are the services of which the contribution for the Indian Squadron is to be in aid. In the view of this department, when the British Government took upon itself all the duties formerly discharged by the Indian Navy, in the whole Indian Ocean, whether of general defence, of protection of commerce, or of suppression of the slave trade, the intention was that India should contribute according to her means towards all those services. This is not the view of the Indian Government, as my Lords are well aware. But let this be the first question to be submitted to arbitration. When it has been decided what are the services or purposes to be embraced by the contribution, it will be a comparatively easy matter to express it in the form of a given number of ships, the whole cost of which is to be paid for by India.

My Lords hope that the First Lord of the Admiralty will press the Secretary of State for India in Council to agree to an arbitration on these lines.

I am, &c.
(Signed) G. L. RYDER.

No. 38.

ADMIRALTY LETTER to INDIA OFFICE of 30th December, 1891, No. 2 E 2300/3542.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to acknowledge the receipt of Major-General Newmarch's letter of the 19th December, 1891, M 11432, and in reply to state, for the information of Lord Cross, that my Lords reluctantly assent to the proposal to hold an Inter-Departmental Conference in connexion with the subsidy payable by India for the maintenance of vessels stationed in Indian waters, and suggest the 6th January for the meeting. The Admiralty will be represented by the First Naval Lord and the Financial Secretary.

I am to add that it is necessary the Committee should arrive at a conclusion, or refer the question in dispute to arbitration, in time to make the necessary financial arrangements for the present and prospective financial years.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 42.

ADMIRALTY LETTER to TREASURY of 3rd February 1892, No. 2 E 378/372.

SIR,

WITH reference to your letter of the 24th December last, No. 17972/91, respecting the contribution to be paid by India on account of Her Majesty's ships stationed in Indian waters and the Persian Gulf, I am commanded by my Lords Commissioners of the Admiralty to forward, for the information of the Lords Commissioners of Her Majesty's Treasury, the enclosed Memorandum* of the proceedings of a committee formed of representatives of the India Office and this Department, held at the Admiralty on the 11th and 25th January last.

2. The committee have reported (*see* last paragraph of Memorandum) that they are unable to agree as to the scope of the words "Indian purposes" in the minutes of the Conference at the Foreign Office, and recommend that this point shall be referred to an independent authority, as well as that of the number and class of vessels required for such purposes.

I am, &c.
(Signed) ARTHUR B. FORWOOD.

No. 43.

TREASURY LETTER to ADMIRALTY and INDIA OFFICE of 10th February 1892, No. 1991/92.

E 453/92.

SIR,

THE Lords Commissioners of Her Majesty's Treasury have had before them your letter of the 3rd instant, No. 2 E 378/372, enclosing, by directions of the Lords Commissioners of the Admiralty, a Memorandum of the proceedings of a committee of officers of the Admiralty and India Office, who recently met to consider the amount of the subsidy to be paid by India for ships of Her Majesty's Navy in Indian waters.

It appears that the committee found it impossible to agree as to what are the purposes for which the ships to be charged to the Indian Government are required; and they recommend that this point, as well as that of the number and class of vessels required for such purposes, should be referred to an independent authority.

My Lords think this is a reasonable recommendation, and they accordingly propose that, with the concurrence of the Board of Admiralty and the Secretary of State for India in Council, the points in question should now be referred to an arbitrator, and that the Prime Minister should be requested to undertake the arbitration.

I am, &c.
(Signed) R. E. WELBY.

No. 44.

ADMIRALTY LETTER to TREASURY of 12th February 1892, No. 2 E 453/473.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to acknowledge the receipt of your letter of the 10th instant, No. 1991/92, proposing that the points in connexion with the subsidy to be paid for ships of Her Majesty's Navy in Indian waters, on which the Committee of officers of the Admiralty and India Office were not able to agree, should be referred to the Prime Minister for arbitration.

My Lords cordially agree with the proposal, which they presume has been communicated to the Secretary of State for India, and trust that steps may be taken to bring it into effect at an early date.

I am, &c.
(Signed) ARTHUR B. FORWOOD.

No. 45.

ADMIRALTY LETTER to INDIA OFFICE of 17th February 1892, No. 2 E 506/531.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to transmit, for the information of the Secretary of State for India in Council, the enclosed documents in connexion with the subsidy to be paid on account of ships in Indian waters which my Lords propose to submit as constituting the case of the Admiralty in the arbitration proposed by their Lordships of the Treasury, viz.:—

Correspondence between the Admiralty, Treasury and India Office subsequent to the conference held at the Foreign Office.

†Memorandum by the First Lord of the Admiralty.

‡Minutes of Proceedings of the Committee of Officers of the Admiralty and India Office.

My Lords will be glad to know if the Secretary of State for India desires to add anything further on behalf of the India Office.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 46.

INDIA OFFICE LETTER to TREASURY of 23rd February 1892, No. M 1522.

SIR,

I AM directed to acknowledge the receipt of your letter of the 10th instant, No. 1991, respecting the amount of the Indian contribution towards the East Indian Squadron, and to acquaint you in reply, that the Secretary of State for India in Council concurs in the proposal that a reference be made to some independent authority to determine what are the "Indian purposes" mentioned in the minutes of the conference held at the Foreign Office on the 26th of March 1890, and what are "the number and class of ships required in the "Persian Gulf and off the coasts of India" for such purposes.

---

* Sub-Appendix 8.

† Sub-Appendix 6. ‡ Sub-Appendix 8.

Viscount Cross observes that the proposed reference does not involve any question of principle, as that has been already settled at the conference; and that the only point now to be decided is the application of the principles laid down, after due consideration of the divergent views held by the Government of India and the Lords Commissioners of the Admiralty.

He considers, therefore, that the authority to be invited to adjudicate should be some one in no way connected with the British or Indian Government, and would suggest, for the consideration of the Lords Commissioners of the Treasury, that the proposed reference should be made to either the Earl of Northbrook or Field Marshal Sir Lintorn Simmons. Lord Northbrook would probably be the fittest to select, as he has held the post of First Lord of the Admiralty, and also that of Viceroy of India.

I am, &c.
(Signed) G. N. CURZON.

ADMIRALTY LETTER to INDIA OFFICE of 10th March, 1892, No. 2 E 660/757.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to acknowledge the receipt of Major-General Newmarch's letter of the 29th February, 1892, M 1774, and in reply to state that my Lords have no objection to the papers particularised therein being added on behalf of the India Office to the case which this department has proposed to submit to the arbitrator to be appointed to consider the subsidy payable by India on account of the maintenance of ships in Indian waters.

I am to add that my Lords also have no objection to the omission of Part II of the printed papers "Out-" standing Claims on account of the 'Sphinx,'" as suggested in the second paragraph of the letter under reply.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 49.

ADMIRALTY LETTER to TREASURY of 15th June, 1892, No. 2 E 1596/1800.

SIR,

THE Committee of Public Accounts in their Second Report, paragraphs 1 and 2, having called attention to the delay in the settlement of the subsidy to be paid by the Indian Government on account of the services of Her Majesty's ships in Indian waters, I am commanded by my Lords Commissioners of the Admiralty to request that you will be good enough to move the Lords Commissioners of Her Majesty's Treasury to cause me to be informed, with reference to Treasury letter of the 10th February last, No. 1991, and to the reply thereto from this department, dated 12 idem, whether the case has been submitted to arbitration as proposed, and, if so, when my Lords may expect to receive a decision on the points in dispute.

I have, &c.
(Signed) EVAN MACGREGOR.

No. 50.

TREASURY LETTER to ADMIRALTY of 18th June, 1892, No. 9549/92.

E 1690/92.

SIR,

THE Lords Commissioners of Her Majesty's Treasury desire me, with reference to your letter of 15th instant, 2 E 1596/1800, and previous correspondence, respecting arbitration on the question of the subsidy to be paid by India for ships of Her Majesty's Navy in Indian waters, to acquaint you, for the information of the Lords Commissioners of the Admiralty, that, as the India Office wished the arbitrator to be someone unconnected with the British or Indian Government, it was arranged, with the concurrence of that Office, and of the First Lord of the Admiralty, to ask Lord Rosebery, in a letter of the 29th March last, of which a copy is enclosed, to act as arbitrator. His Lordship has now accepted the office in a letter of 4th instant, of which a copy is also enclosed.

My Lords are informing Lord Rosebery that papers will be furnished to him on behalf of the Imperial and Indian Governments setting forth the exact points to be decided, and their respective views upon them, and that both Governments will be ready to give any further information which his Lordship may desire.

My Lords would suggest that the Admiralty should prepare a Memorandum expressing their Lordships' views, which might be communicated to this Board in order that my Lords may add any remarks which they may think desirable on the financial aspect of the case.

I am, &c.
(Signed) R. E. WELBY.

Enclosure 1 in No. 50.

TREASURY LETTER to the Right Hon. The EARL OF ROSEBERY, P.C., of 28th March, 1892, No. 5021/92.

MY LORD,

THE Lords Commissioners of Her Majesty's Treasury direct me to say that the Board of Admiralty and the Secretary of State for India in Council unite with them in asking your Lordship to be so good as to consent to act as arbitrator upon the question of the amount of contribution to be annually paid by India to the United Kingdom for the maintenance of a squadron in Indian waters.

For many years this contribution consisted of 70*l.* per man for the assumed cost of the pay and victuals of the crews of six ships. About five years ago, the number of ships was reduced to four, and it was soon afterwards pointed out by the Treasury that India ought to pay the whole cost of them, effective and non-effective, instead of an obsolete valuation of part of the cost.

The question was brought before an Inter-Departmental Conference presided over by the Marquis of Salisbury, on the 26th March, 1890, and the decision arrived at was that, when the number and class of ships required in the Persian Gulf and off the coasts of India, *for Indian purposes*, had been settled by the British and Indian Governments jointly, India would pay the whole cost.

Since then the question has turned on the meaning of *Indian purposes*. If these purposes are to be merely those of police, very few and very small vessels will be needed; if they are in any degree to include purposes of external defence, more and larger vessels are required. The departments concerned can arrive at no agreement on this point.

When the number and class of ships have been agreed upon, some minor points of doubt will remain as to the method of calculation to be adopted in arriving at the whole cost of the ships, which it will be expedient to decide at the same time.

Although the subject matter is one of very considerable importance, my Lords believe that a decision upon it need not occupy much of your Lordship's time; and they hope to learn that you are willing to undertake the arbitration.

I am, &c.
(Signed) R. E. WELBY.

Enclosure 2 to No. 50.

LETTER from the Right Hon. The EARL OF ROSEBERY, P.C., to the TREASURY, of 4th June, 1892.

SIR,

I AM very sensible of my unfitness for the task; but, as it is deemed that my services can be of use, I shall be happy to undertake the arbitration mentioned in your letter of 28th March. Perhaps you will kindly inform me whether it is proposed to submit the cases in writing or by word of mouth.

I am, &c.
(Signed) ROSEBERY.

No. 51.

ADMIRALTY LETTER to TREASURY of 6th July 1892, No. 2 E 1747/2039.

SIR,

MY Lords have had before them your letter of the 18th ultimo, No. 9549, stating that Lord Rosebery has consented to act as arbitrator on the question of the Indian subsidy.

With regard to the suggestion that the Admiralty should prepare a memorandum on the matter, my Lords desire me to request that you will inform their Lordships of the Treasury that the Admiralty case for arbitration has been agreed on with the India Office, and consists of—

1. Correspondence subsequent to the conference at the Foreign Office.
2. Memorandum of the First Lord of the Admiralty.
3. Minutes of committee of officers of the Admiralty and India Office.

To add to this would, my Lords consider, require the consent of the India Office, and would probably lead to correspondence and the indefinite postponement of the arbitration.

The case, as forwarded to the Treasury in letter of 17th February last, No. 2 E 506/531, only needs amendment to the extent of eliminating, as requested by the India Office, the correspondence in connexion with the "Sphinx." This has been done in the papers enclosed, to which, however, has been added, for convenience of reference, an index of the financial statements included therein.

My Lords have also considered the Treasury memorandum on the financial aspect of the case, forwarded to the Admiralty in Mr. Ryder's note of the 23rd ultimo, but I am to say that, for the reasons stated above, they feel that they are precluded from adopting it as part of their case, though they see no objection to their Lordships of the Treasury putting it forward separately.

I am to add that my Lords, should the India Office consent, would be glad of arbitration as to the method of calculation to be adopted in arriving at the total cost of the ships.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 52.

TREASURY LETTER to ADMIRALTY of 14th July 1892, No. 1127/92.

E 1907/92.

SIR,

WITH reference to your letter of the 6th instant, 2 E 1747, the Lords Commissioners of Her Majesty's Treasury direct me to enclose, for the information of the Lords Commissioners of the Admiralty,* a copy of a letter of to-day's date which they have addressed to Lord Rosebery as arbitrator in the matter of the subsidy payable by India for Her Majesty's ships in Indian waters.

A copy of the printed remarks of the Treasury, alluded to in that letter, is also enclosed.

I am, &c.
(Signed) R. E. WELBY.

No. 53.

ADMIRALTY LETTER to TREASURY of 20th September 1892, No. E 1907/92, 2814.

SIR,

WITH reference to Treasury Letter of the 14th July 1892, No. 11,277, I am commanded by my Lords Commissioners of the Admiralty to ask whether the award of Lord Rosebery on the points submitted to him in connexion with the subsidy to be paid by India as regards Her Majesty's vessels in Indian waters has yet been communicated to their Lordships of the Treasury.

My Lords are most anxious that an early settlement should be arrived at of the questions outstanding in connexion with this matter, in view of their bearing on the expenditure of the current year, and the estimates for 1893-94.

I am, &c.
(Signed) R. D. AWDRY.

No. 54.

TREASURY LETTER to ADMIRALTY of 8th October 1892, No. 15390/92.

E 2537/92.

SIR,

WITH reference to previous correspondence respecting the arbitration in the matter of the subsidy payable by India for Her Majesty's ships in Indian waters, the Lords Commissioners of Her Majesty's Treasury announce, with regret, for the information of the Lords Commissioners of the Admiralty that, owing to his appointment as Secretary of State for Foreign Affairs, the Earl of Rosebery has been compelled to renounce the task of arbitrator.

I am, &c.
(Signed) FRANK MOWATT.

No. 55.

ADMIRALTY LETTER to TREASURY of 24th December 1892, No. E 3133, 3887.

SIR,

WITH reference to previous correspondence relative to the arbitration in the matter of the subsidy payable by India for Her Majesty's ships in Indian waters, and particularly to Mr. Mowatt's letter of the 8th October last, No. 15,390, I am commanded by my Lords Commissioners of the Admiralty to request that you will represent to their Lordships of the Treasury that great inconvenience in connexion with the preparation of the Navy Estimates for 1893-94, as well as in dealing with the current year's expenditure, is being occasioned by the continued delay in arriving at a settlement of this question.

My Lords hope that the matter may be pressed forward as much as practicable, and that the arbitrator's decision may be obtained at an early date.

I am, &c.
(Signed) EVAN MACGREGOR.

* *See* Part I., ii.

No. 56.

TREASURY LETTER to INDIA OFFICE of 26th July 1893, No. 10,825/93.

SIR,

THE Lords Commissioners of Her Majesty's Treasury request you to call the attention of the Secretary of State for India in Council to the long pending question of Arbitration in the matter of the subsidy payable by India for Her Majesty's ships in Indian waters, dealt with in India Office letter of the 15th October last, and previous correspondence.

Since that date, as you are aware, various semi-official communications have passed between the two Departments with regard especially to the exact terms of reference to the arbitrator, the points of difference being as shown in the following table:—

Questions as proposed by the India Office (3221/92).	Questions as proposed by the Treasury, with Concurrence of the Admiralty.
1. What are the "Indian purposes" mentioned in the Minutes of the Conference held at the Foreign Office on the 26th March 1890?	1. For what purposes are the ships chargeable to India required?
2. What are the numbers and class of ships required in the Persian Gulf and off the coast of India for such purposes?	2. What ought to be the number and class of ships so charged?
	3. How ought their cost to be calculated?

I am to say that the Treasury would be willing to word the first question thus:—

1. What *should be* the meaning of the term "Indian purposes" which was used in the Minutes of the Conference at the Foreign Office, on the 26th March 1890? If the India Office will agree to the above wording of question 1, and to the addition of the third question, about cost, the Treasury will accept the India Office wording of the second question.

The reason why my Lords object to the India Office form of the first question is very simple. That form confines the question exclusively to one of documentary fact, viz.:—"What are the Indian purposes mentioned "in the Minutes of Conference?" No arbitrator is needed to say that the memorandum of the 12th August 1890, which is the sole Minute of the Conference, contains no specification of Indian purposes. An allusion, indeed, is made to protection of floating trade, which affords a strong presumption that such protection was one of the purposes in view. But the Conference consisted of persons with probably conflicting opinions, and they left the term "Indian purposes" undefined.

It is obvious, therefore, that no one can decide the meaning of that term without first making up his mind as to what it ought to mean.

As regards the second question, the area in which the ships are to operate ought, of course, to be determined by the purposes which they are to fulfil; therefore, my Lords much prefer their own form of this question, but they reluctantly accept the India Office form on the understanding that "off the coasts of India" means as far off as the legitimate Indian duties of the ships will take them. The Secretary of State will observe that the limits within which the ships were to be employed were left by the Foreign Office Conference for settlement between the two Governments.

The third question is added because it relates to a necessary part of the controversy which must be settled before the amount of subsidy can be arrived at, and it is most desirable that the award of the arbitrator should settle that amount for a definite period.

I am, &c.
(Signed) JOHN T. HIBBERT.

No. 57.

ADMIRALTY LETTER to TREASURY of 15th August 1893, No. 2 E 3133/92/3093.

SIR,

ADVERTING to my letter of the 24th December, 1892, No. 2 E 3133/3887, on the subject of the arbitration in the matter of the subsidy payable by India for Her Majesty's ships in Indian waters, I am commanded by my Lords Commissioners of the Admiralty to request that you will again represent to their Lordships that great inconvenience is being felt in dealing with the current year's expenditure owing to the continued delay in arriving at a settlement of this question.

My Lords observe that the Public Accounts Committee, in the 43rd paragraph of their second Report of this year, express the opinion that "public interests "urgently claim a speedy settlement of this con-"troversy," and they hope that the arbitrator's decision may be obtained at an early date.

I am, &c.
(Signed) R. D. AWDRY.

No. 58.

INDIA OFFICE LETTER to TREASURY of 21st August 1893 No. M 7086.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of 26th July 1893, No. 10,825/93, regarding the question of Arbitration as to the subsidy payable by India for Her Majesty's ships in Indian waters.

I am in the first place to point out that the two sets of questions detailed in your letter are not correctly described as those proposed by this Office, and by the Treasury with concurrence of the Admiralty. The first set of questions is that originally proposed by the Treasury in their Letter No. 1991/92, of the 10th February 1892, and accepted by this Office in Mr. Curzon's letter of 23rd February 1892; the second set is that which the Treasury substituted in the letter to Lord Rosebery, of the 14th July 1892, and to which objection was at once taken in the letter from this Office of the 21st July.

The Secretary of State for India in Council agreed to refer to the Inter-Departmental Committee these two questions, and on the failure of the Committee to come to an agreement, he assented to the suggestion that they should be referred to some independent authority. To that agreement Lord Kimberley is prepared to adhere, and he is not prepared to go beyond it.

His Lordship must decline to submit to arbitration the question as to what "*should*" be the meaning of the term "Indian purposes" used in the Minutes of the Conference at the Foreign Office on the 26th March 1890. He has himself no doubt that the meaning of the term is as stated in the letter from this Office of 11th December 1891, M 10,481, "the maritime police "of the coast, and the suppression of piracy, and of "the local slave trade." That this was the meaning intended by the Conference at the Foreign Office is confirmed by the fact that it was the Government of India which was to be consulted "as to the number "and class of ships required in the Persian Gulf, and "off the coasts of India, for Indian purposes." Had these last words been intended to have the wider meaning which the Treasury now desire them to bear, of the protection of commerce and the external and general defence of the Indian seas, it would hardly have been necessary to consult that Government, and assuredly the reference would not have been narrowed down to the limits of the Persian Gulf and the coasts of India.

The point for reference to the arbitrator is simply the meaning which an impartial person, from a study of the previous correspondence, would attribute to the words "Indian purposes," as used in the Memorandum of the 26th March 1890.

The next question naturally follows the same lines, and the arbitrator should have no difficulty in arriving at a conclusion from a study of the papers and the arguments of both Departments.

These are the only two points on which any difference arose between the representatives of the Admiralty and the India Office, and, when these are settled, there will be no difficulty in settling the third point raised by the Treasury, how the cost of ships shall be calculated.

I have, &c.
(Signed) GEORGE W. E. RUSSELL.

No. 59.

TREASURY LETTER to INDIA OFFICE of 14th October 1893, No. 12,919/93.

SIR,

THE Lords Commissioners of Her Majesty's Treasury have had before them your letter of the 21st August respecting the terms of reference to the arbitrator on the naval subsidy payable by India.

The Secretary of State for India in Council objects to the description given in the Treasury letter of the 26th July last of the two sets of questions detailed in parallel columns in that letter, and says that the first set was originally proposed by the Treasury on the 10th February 1892, and was only accepted, not proposed, by the India Office, on the 23rd of the same month. The following table will show that this statement is not well founded.

Questions as worded in Treasury Letter of the 10th February 1892.	Questions as worded in India Office Letter of 23rd February 1892.
1. What are the purposes for which the ships to be charged to the Indian Government are required?	1. What are the "Indian purposes" mentioned in the Minutes of the Conference held in the Foreign Office on the 26th of March 1890?
2. What are "the number and class of vessels required for such purposes"?	2. What are the numbers and class of ships required "in the Persian Gulf and off the coasts of India for such purposes"?

It will be seen that the Treasury questions of the 10th February 1892, so far from being those accepted by the India Office on the 23rd February, are really the equivalents of Questions 1 and 2 of the Treasury letter to Lord Rosebery of the 14th July 1892, viz.: (1) "For "what purposes are the ships chargeable to India "required"? (2) "What ought to be the number and class of ships so charged"?

Their Lordships much regret that the Secretary of State in Council should object to the submission to the arbitrator of the second question, as to how the cost of the ships ought to be calculated. His Lordship dismisses this point as one raised by the Treasury only, and not one that gave rise to difficulty between the representatives of the Admiralty and India Office. It is true that the Minutes of the Inter-Departmental Committee of the 11th and 25th January 1892 do not mention the point, because the inability of the Committee to agree on the two preliminary questions prevented them from reaching the third. But the method of calculation is discussed as one of the controversial questions requiring settlement in Lord G. Hamilton's printed Memorandum of the 28th November 1891, forming part of the case which the India Office agreed that the Admiralty should submit to the arbitrator, as well as in the India Office printed Memorandum of the 23rd December 1891, comprised in the Indian Addendum to that case.

I am, &c.
(Signed) R. E WELBY.

No. 60.

TREASURY LETTER to ADMIRALTY of 14th October 1893, No. 12,919 E 2612/93.

SIR,

ADVERTING to Mr. Awdry's letter of the 15th August, on the question of the Arbitration as to the Subsidy payable by India for Her Majesty's ships in Indian waters, the Lords Commissioners of Her Majesty's Treasury direct me to enclose, for the information of the Lords Commissioners of the Admiralty, copy of correspondence, as noted below, which has passed between the India Office and this Department on the subject:—

*Treasury to India Office, 26th July 1893.
India Office to Treasury, 21st August 1893.
Treasury to India Office, this day.

I am, &c.
(Signed) R. E. WELBY.

* Nos. 56, 58, and 59.

No. 61.

ADMIRALTY LETTER to TREASURY of 3rd November 1893, No. 2 E 2612/4010.

SIR,

IN acknowledging the receipt of your letter of the 14th October 1893, No. 12,919, I am commanded by my Lords Commissioners of the Admiralty to express their extreme regret that the terms of reference for the arbitration on the subsidy payable by India for Her Majesty's ships in Indian waters have not yet been settled.

2. The delay which has occurred in this matter has caused my Lords very serious inconvenience, and, as the payment now being made by India is short by 67,000*l.* of the sum included in the Navy Estimates, it may lead to the necessity of a supplementary estimate.

3. Their Lordships would readily agree to an arbitration on Question 1 as proposed by the India Office (*see* Treasury Letter to that Department of the 26th July last), or would even prefer the reference as very clearly stated in paragraph 5 of the India Office Letter to the Treasury of the 21st August last.

4. As the question has been kept open since the late Government left office, and the India Office and the Treasury seem no nearer a settlement than they were, my Lords hope that the matter in dispute between these two Departments of the Government may be now submitted to the First Lord of the Treasury for decision as to the terms of the reference.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 62.

ADMIRALTY LETTER to INDIA OFFICE of 9th November 1894, No. 2 E 2771/3532.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to state, for the information of the Secretary of State for India in Council, that they have viewed with much regret the difficulties which have arisen in bringing to arbitration the differences between this Department and the India Office, as regards the subsidy payable by India on account of Her Majesty's ships in Indian waters, and I am to express a hope that Mr. Fowler will consent to lay the whole correspondence before the Prime Minister in order that we may settle what can best be done under the circumstances.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 63.

INDIA OFFICE LETTER to ADMIRALTY of 16th November 1894, No. M 10765.

E 2857/94.

SIR,

I AM directed to acknowledge the receipt of your letter of 9th November 1894, and to acquaint you in reply that the Secretary of State for India in Council has no objection to the proposal to lay before the Prime Minister the correspondence regarding the subsidy to be paid by India for Her Majesty's ships in Indian waters, in order that Lord Rosebery may consider what course should, under the circumstances, be taken in order to settle the questions at issue.

I have, &c.
(Signed) REAY.

No. 64.

ADMIRALTY LETTER to TREASURY of 21st November 1894, No. 2 E 2857/3677.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to forward, for the information of the Lords Commissioners of Her Majesty's Treasury, copies of correspondence (Admiralty letter to India Office of the 9th November 1894, and reply thereto of the 16th idem), which has taken place between the India Office and this Department relative to the subsidy to be paid by India on account of Her Majesty's vessels stationed in Indian waters.

I am to add that it is presumed that my Lords will be informed what papers their Lordships of the Treasury propose to submit to the Prime Minister.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 65.

TREASURY LETTER to ADMIRALTY of 29th November 1894, No. 17164/94.

E 2940/94.

SIR,

WITH reference to previous correspondence on the subject of the subsidy payable by India for services rendered by Her Majesty's ships in Indian waters, I am desired by the Lords Commissioners of Her Majesty's Treasury to acknowledge the receipt of your letter of 21st inst., transmitting copies of letters which have passed between the Board of Admiralty and the Secretary of State for India in Council, and in which it is agreed to submit the questions at issue to the Prime Minister for his decision as to the course which should now be adopted to effect a final setlement.

My Lords have laid the correspondence before the Earl of Rosebery and they instruct me to state that his Lordship will very shortly cause a communication upon the subject to be addressed to each of the Departments concerned.

I am, &c.
(Signed) FRANCIS MOWATT.

No. 66.

ADMIRALTY LETTER to INDIA OFFICE of 25th February 1895, No. 2 E 540/610.

SIR,

WITH reference to my letter of the 9th November last, and the India Office reply of the 16th idem, in which it was agreed to lay before the Prime Minister the correspondence regarding the subsidy to be paid by India for Her Majesty's ships in Indian waters, I am commanded by my Lords Commissioners of the Admiralty to state, for the information of the Secretary of State for India in Council, that they have received Lord Rosebery's award as to the definition of the term "Indian purposes" used in the agreement entered into at the Foreign Office Conference with reference to the maintenance of certain vessels in Indian waters.

Lord Rosebery in this award decides that the expression "Indian purposes" cannot be limited to merely maritime police "and the repression of piracy, "but must be held to include some portion at any rate "of the duties devolving on the Royal Navy for the "defence of India and the protection of trade in Indian "waters."

In view of this award, my Lords assume that the Government of India will now be prepared to concur in the list of ships put forward by the Admiralty in 1891, as those upon which the subsidy was to be paid.

The Secretary of State for India is no doubt aware that these ships were selected by the late Board of Admiralty on the interpretation of the term "Indian purposes" as now defined in the award.

I am to add that the present Board, after full consideration of the subject, are in accord with their predecessors both as to the number and class of ships selected.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 67.

INDIA OFFICE LETTER to ADMIRALTY of 28th March 1895, No. M 2216.

E 890/95.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of 25th February 1895, No. 2 E 546/610, regarding the number and class of ships to be allotted for Indian purposes, as those upon which the Indian contribution to the cost of the East India Squadron is to be based.

When the question of revising the annual subsidy was first raised by the Treasury, in January 1890, it was proposed that India should pay the full cost, estimated at 76,079*l.* per annum, of the

"Turquoise"	2,120 tons.
"Algerine"	970 "
"Mariner"	835 "
"Sphinx"	1,130 "

Subsequently a revised statement, prepared by Mr. Forwood (July 5th, 1890), put the annual cost of the "Turquoise," "Mariner," "Algerine," and "Sphinx" at 103,577*l.*

In 1891 the Admiralty proposed to substitute for these vessels the

"Marathon"	2,950 tons.
"Brisk"	1,770 "
"Pigeon"	755 "
"Sphinx"	1,130 "

with the view, it was said, of meeting objections which were entertained against the ships then on the station. On the other hand, the Government of India pointed out that ships of the size of the "Marathon" and "Brisk" were not suited to their special requirements, and entirely unsuitable for the service of India. The annual cost was calculated by the Admiralty at 121,094*l.* In addition to this, it was proposed that India should pay the entire cost of coal in the Persian Gulf, and of that consumed in the other vessels when on services performed at the request of the Indian authorities. As 4,000*l.* was estimated to be paid in India for repairs of the "Sphinx," the amount claimed by the Admiralty on the 15th January 1891 as the annual charge upon India was 117,000*l.*; and it is presumed that it is that sum to which your present letter refers.

In reply I am to state, for the information of the Lords Commissioners of the Admiralty, that the Secretary of State for India in Council is unable to agree to the list of ships and payment proposed.

The Secretary of State for India in Council considers that the payment by the Australian Colonies, to which special reference was made at the Foreign Office Conference, might, under the award by Lord Rosebery, be taken as a basis for calculating the subsidy to be paid by India. Under the Australasian Agreement, three cruisers and one gunboat are to be kept in commission in time of peace, and two cruisers and one gunboat in reserve, and the total payment by the Colonies is not to exceed 126,000*l.* a year. The strength of the Australian Squadron, including the above vessels in commission, amounts to 20,645 tons, and that of the East India Squadron, exclusive of the "Magdala" and "Plassy," but including the ships which the Admiralty propose to allot for Indian purposes, is 13,500 tons. Mr. Secretary Fowler is of opinion that the Indian contribution should bear the same proportion to the Australian payment as the East India Squadron bears to the Australian Squadron. Calculated on this basis the contribution by India would be 82,392*l.* a year, nearly double the payment under the Agreement of 1887—41,600*l.* This sum would provide for the following ships, the cost being taken from Statement "B" attached to your letter of 15th January 1891, No. 2 E 97/141, that is, on the scale adopted for the Colonies:—

	Tons.	£
"Brisk"	1,770	32,852
"Pigeon"	755	15,113
Gunboat (same class)	755	15,113
"Sphinx"	1,130	19,339
Total		82,417

The Lords Commissioners will observe that the Indian Defence Flotilla, the property of India, maintained out of Indian revenues for the protection of Indian harbours, will be in addition to the foregoing. Though these vessels are primarily intended for the above purpose, they may, except in certain special circumstances, be utilised in time of war by the Naval Commander-in-Chief; and it is obvious that the disposal of this large addition to the East India Squadron will liberate for the protection of commerce a much larger force than would otherwise be available.

More than this the Secretary of State for India in Council considers the Government of India cannot be asked to contribute towards naval expenditure in Indian waters.

As regards coal, I am to inquire whether its cost in Colonial ships is included in the payment under the agreement, or defrayed separately.

Mr. Secretary Fowler proposes, therefore, that the annual payment by India be fixed at 82,400*l.*, and that this arrangement should hold good for 10 years, beginning from the 1st April 1895.

I have, &c.
(Signed) REAY.

No. 68.

ADMIRALTY LETTER to INDIA OFFICE of 13th April 1895, No. 2 E 890.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to acknowledge the receipt of your letter of the 28th March, No. M 2216, on the subject of the subsidy on account of Her Majesty's ships in Indian waters, and in reply to express their satisfaction that the Secretary of State for India in Council has, to some extent, complied with the award of Lord Rosebery, by raising the number of ships, for which it is proposed to pay, from three to four, the number fixed by my Lords; but they cannot admit that the ships selected on behalf of India, which are only applicable to the limited definition of Indian purposes now decided to be untenable, meet the wider definition given to that term by Lord Rosebery, which includes "some portion of the "duties devolving on the Royal Navy for the defence "of India and the general defence of trade in Indian "waters."

To meet this requirement, my Lords consider that there should be at least one ship of a larger type than those desired by India, and they must adhere to their opinion that the "Marathon," a vessel of 2,950 tons, should be one of the selected ships. They therefore regret that they cannot agree to the ships named by the India Office.

My Lords notice that by a method of calculation based partly on tonnage and partly on the amount of the Colonial subsidy (which does not adequately represent the cost of the ships), the India Office has arrived at the result that vessels, whose tonnage amounts in the aggregate to 4,410 tons, a little more than one-quarter of the total tonnage of the Indian Squadron, properly represent the proportion of the Indian Squadron to which the term "Indian purposes" is applicable.

Although my Lords could not admit that any comparison between two stations would necessarily or probably hold good even as regards tonnage, yet, as the India Office has made the comparison, they would remark that the proportion which the tonnage of the ships selected by the Admiralty bears to the total tonnage of the East India Squadron, does not much differ from that of the Australasian ships to the tonnage of the Australian Squadron.

The East Indian squadron at present consists of vessels having an aggregate tonnage of 15,060 tons. The tonnage of the ships selected by the Admiralty amounts to 6,605 tons, or ·44 of the whole.

The tonnage of the Australian Squadron in commission is 23,220, and of the Australasian ships in commission under the Convention 8,460 tons, or ·36 of the whole; but in addition there are maintained in the Colonies under the Convention, ships in reserve having a tonnage of 5,885 tons, If an allowance be made for these as part of the strength of the squadron, say one-half only of their tonnage, the total tonnage of the squadron will be increased to 26,162 tons, and that of the subvention ships to 11,402 tons, making the percentage of the latter to the former rather more than ·43.

My Lords would remind Mr. Secretary Fowler that, while constantly pressing the Australasian agreement as the basis of charge for the Indian ships, in which my Lords cannot concur, the Indian Government has never contended that the Admiralty calculation does not accurately represent their whole cost.

The terms of the memorandum of the Foreign Office Conference, viz., "that India is to pay the full cost, "effective and non-effective, of the ships required for "Indian purposes," entirely shut out the pecuniary arrangement entered with the Australasian Colonies as the basis for calculating the subsidy to be paid by India.

The subsidy paid by the Australasian Colonies was fixed by an Act of Parliament, and was subject to specified maxima for prime cost and yearly maintenance, both of which fall considerably short of what is actually incurred. There is a further important difference in the arrangement, viz., the control of the Colonies is limited to their consent being required to the removal of a ship from the station, but does not extend to requisitioning their services for purely Colonial purposes, such as would correspond to those to which the Indian Government wished to limit "Indian purposes."

It by no means follows that, on a renewal of the arrangement, terms more favourable to the Imperial Government will not be obtained from the Colonies.

My Lords, while agreeing to the term of 10 years being fixed for the continuance of the agreement which is about to be made, cannot assent to the proposal that the arrangement should take effect from the 1st April 1895.

This view is supported by the fact that the India Office has paid, without prejudice, since 1891-92, a sum of 50,000*l.*, based on the cost of the ships selected by the Indian Government, and in the opinion of my Lords the payment should commence from 1st April 1891.

As regards coal, my Lords consider that, under the terms of the Foreign Office memorandum, and of the Prime Minister's award, they would have been justified in claiming the whole cost of coal consumed by the ships selected for Indian purposes; but they do not desire to go beyond the arrangement proposed in the Admiralty letter of 15th January 1891, E 97/141, viz., that India should pay, in addition to the subsidy, the entire cost of coal used in the Persian Gulf, and of that consumed in the vessels when on services performed at the request of the Indian authorities.

My Lords feel sure that Mr. Secretary Fowler will agree with them in deprecating any further delay in the settlement of this long outstanding controversy.

Should Mr. Fowler, unfortunately, not feel able to concur in the views expressed in this letter, my Lords trust that to obviate further delay he will consent to submit the correspondence for the decision of the Prime Minister, who, in a note to the First Lord of the Admiralty of the 6th December last, intimated that, should there be any difficulty, after defining the words "Indian purposes," in settling the number and class of vessels required, and the payment to be made for them, he would be ready to undertake the solution of this question also, if his decision would be accepted as final.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 69.

INDIA OFFICE LETTER to ADMIRALTY of the 23rd May 1895, No. M 3680.

E 1395/95.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of the 13th April 1895, No. 2 E 890/1229, regarding the subsidy for Her Majesty's ships in Indian waters.

2. With reference to the observations in the fourth and following paragraphs of your letter regarding the proportion of tonnage of the ships selected by the Admiralty to the total tonnage of the East India Squadron, I am to observe that according to the Navy List on 1st January 1895 (the only source of information available to this department) the East India Squadron consisted of the vessels noted in the margin,* with an aggregate tonnage of 13,500 tons, and not 15,060 tons as stated in your letter. It is also stated in your letter that the tonnage of the Australian Squadron in commission is 23,220, but according to the Navy List this includes *four* Australian cruisers and one gunboat, while the Australian agreement provides for only three cruisers and one gunboat in commission. And, though four cruisers out of five are included in the above total tonnage, one of these cruisers is again taken into account as being in reserve. One ship seems therefore to be taken twice over. Deducting this ship, the tonnage is 20,645, as given in the letter from this Office. Moreover, if the ships of the Australian Government out of commission are to be taken into account, some weight must also be allowed to the ships and torpedo boats, in commission and in reserve, which are kept up at the expense of the Government of India. In time of war they would be at the disposal of the admiral, except in very exceptional circumstances, and in ordinary times the gunboat in commission could at any time be used for Indian purposes off the coast of India.

3. The method of calculation adopted by this Office was, in the opinion of the Secretary of State for India in Council, a fair and reasonable way of settling the share which India should pay of the cost of the squadron; but he is willing to consider any alternative proposal, based on some definite principle, which the Admiralty may suggest Your letter ignores the consideration that, according to the terms of the Foreign

* "Bonaventure," "Bramble," "Brisk," "Cossack," "Lapwing," "Marathon," "Sphinx."

Office Conference, the Indian Government was to be consulted as to the number and class of ships required for Indian purposes, and that the number was to be settled by the British and Indian Governments jointly. The Indian Government proposed accordingly the "Sphinx" and two gunboats of the "Pigeon" class, the cost of which, if calculated according to the Australasian agreement, would be 49,565*l.* per annum. To this number the Secretary of State for India in Council has now added the "Brisk" (1,770 tons), in accordance with Lord Rosebery's award. On the other hand, the ships proposed by the Admiralty are merely those which it was stated in your letter of 15th January 1891, No. 2 E 97/141, the Lords of the Admiralty had arranged to allot for the service and defence of India, before the Government of India had given their opinion, as required by the Foreign Office agreement, and no reasons were, or are now, assigned for the selection of these particular vessels rather than any other number or class of ships.

4. As regards the mode of calculating the cost of the ships, I am to point out that one of the grounds urged at the Foreign Office Conference for an increased payment by India was "the example of the Australasian "Colonies (which are contributing liberally for the "protection of their floating trade)." In Sir J. Gorst's letter to your address of the 3rd February 1891, the Secretary of State in Council at once noticed that it was proposed to charge India more by 10,177*l.* a year than if the arrangement were analogous to that with Australia, and that he saw no sufficient reason for this difference. You now, however, state that the subsidy paid by the Australasian Colonies falls considerably short of the sum actually incurred; and, as Mr. Fowler does not wish to urge a departure from the agreement to pay the whole cost of the vessels that may be selected, he will no longer press for a reduction on the analogy of the Australasian agreement. He is willing, therefore, to pay for the ships detailed in this Office letter of the 28th March 1895, according to the Statement A., received with your letter of the 15th January 1891, as follows:—

	£
"Brisk" - - -	36,299
"Pigeon" - - -	16,513
Gunboat, same class - -	16,513
"Sphinx" - - -	20,855
Total - -	90,180

instead of 82,417*l.* as proposed in my letter of 28th March. Should the Lords Commissioners still feel unable to accept the proposals made in this Office letter of the 28th March last, with the modification last mentioned, Mr. Secretary Fowler will have no objection to submit for the decision of the Prime Minister the question of the number and class of ships required for Indian purposes, and on receipt of a further communication from you a case will be submitted for Lord Rosebery's consideration.

5. The Lords Commissioners also object to the proposal that the new arrangement should take effect from the 1st April 1895, and they find support for their view in the fact that this Office has paid annually without prejudice, since 1891–92, a sum of 50,000*l.*, based on the cost of the ships selected by the Indian Government. In reply I am to observe that the Secretary of State for India in Council agreed to pay this sum, as being in round numbers the cost of the ships which, after consulting the Indian Government, he considered to be those required in the Persian "Gulf and off the coasts of India for Indian purposes." In consenting to this interim payment, it was assumed that there would be no great delay in settling the question at issue, and that the charge in India for repairs of the "Sphinx," estimated at 4,000*l.* a year, would shortly cease. As, however, these repairs have still been carried out in India at the expense of Indian revenues, it is evident that this Office is entitled to claim as a deduction from the payment of 50,000*l.* a year the amount actually spent in India on these repairs since 1st April 1891.

6. I am to request that you will invite the attention of the Lords of the Admiralty to paragraphs 2–6 of Sir A. Godley's letter of 11th December 1891, in which it was pointed out that the Government of India and this Office were in no way responsible for the delay which originally took place in dealing with this question. Since then there has been still further delay, in no way due to this Office, and the meaning of the term "Indian purposes" has only recently been settled by Lord Rosebery's decision. The Secretary of State for India in Council has always been anxious to expedite a settlement, but he must remind the Lords Commissioners that under the terms of the Foreign Office Conference the new arrangement was not to come into force till the number and class of ships had been settled by the British and Indian Governments jointly. This question of arrears is a point which Mr. Fowler cannot agree to refer to Lord Rosebery's decision, as he considers it to be clearly settled by the Foreign Office agreement; and, accordingly, he must adhere to the view that the increased payment, whatever it be, shall take effect only from the 1st April 1895, from which date a certain provision has been made in the Indian Estimates for the purpose.

I have, &c.
(Signed) REAY.

No. 70.

ADMIRALTY LETTER to INDIA OFFICE of 30th May 1895, No. 2 E 1395/1689.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to state for the information of the Secretary of State for India in Council that they have had under their consideration Lord Reay's letter of the 23rd May on the subject of the subsidy for Her Majesty's ships in Indian waters.

In reply I am to express the satisfaction of my Lords that the mode of calculation adopted by the Admiralty in assessing the total cost of the selected ships is now concurred in.

In view of this concurrence, and as my Lords have never considered that any comparison, useful in settling the points in dispute, could be made between the Indian and Australian Squadrons, they do not propose to make any further remarks on the question of tonnage raised in your letter under reply, although if necessary there would be no difficulty in substantiating the statements as to the composition of the two squadrons made in my letter of the 13th April last.

As the two Departments are now in accord as to the number of ships (viz., four) to be selected for Indian purposes, my Lords are glad to find that there remain no more than two further points for settlement: the class of the four vessels and the commencing date of the arrangement.

As regards the class of ships, the views of the two Departments may be thus contrasted:—

ADMIRALTY.		INDIA.	
	Tons.		Tons.
"Marathon" -	2,950	"Brisk" - -	1,770
"Brisk" - -	1,770	"Pigeon" - -	755
"Pigeon" - -	755	Do. - -	755
"Sphinx" - -	1,130	"Sphinx" - -	1,130
	6,605		4,410

It will be seen that the difference is as regards one ship only, viz., that Mr. Fowler proposes to substitute for the "Marathon," selected by the Admiralty, a gunboat of the "Pigeon" class.

Lord Rosebery's award decides that "Indian purposes must be held to include some portion at any "rate of the duties devolving on the Royal Navy for "the defence of India, and the protection of trade in "Indian waters." This conclusion of Lord Rosebery would, in the opinion of my Lords, clearly not be met by the selection of ships none of which exceeds 1,770 tons. They adhere to their view that the "Marathon," which is not the largest ship on the station (the flag ship the "Bonaventure" having a tonnage of 4,360 tons), should remain as one of the selected ships.

It may further be observed that no inconsiderable protection to Indian trade, and even to the defence of India itself, is afforded by squadrons on other stations to the cost of which India is in no way asked to contribute. My Lords regret, therefore, that they are unable to concur in the proposal under this head made in your letter.

As to the commencing date of the arrangement, my Lords fail to understand why there should be any

objection to referring the question for the Prime Minister's decision. They do not concur in Mr. Fowler's view that it has been clearly settled by the Foreign Office Conference, and have directed me to make the following remarks for his consideration.

Obviously the proposal as to the ships to be selected must have emanated either from the Admiralty or from the India Office.

On this point Lord George Hamilton, in his Memorandum of the 28th November 1891, contended that "the initiative in the selection of the ships necessarily "rests with the Admiralty, who must consider the "requirements of the station as a whole, and the proportion which the ships, specially selected for Indian "waters, should bear to the full strength of the "squadron. The letter of the Foreign Office Memorandum undoubtedly requires the consent of the "Indian Government to the selection, but its spirit "would equally forbid that consent to such selection "should be unreasonably withheld."

To this, in the India Office Memorandum of the 23rd December 1891, it was replied:—"This appears "to reverse the order of the procedure. By the terms "of the Foreign Office Memorandum, the Indian "Government was first 'to be consulted as to the "'number and class of ships required in the Persian "'Gulf and off the coasts of India for Indian pur-"'poses.' It can hardly be denied that the initiative "as to what is required 'for Indian purposes' must "rest with the Government of India. When their "opinion as to their requirements should have been "given, the Memorandum provided that the settlement of the number was to rest with the British "and Indian Governments jointly; and, though not "expressed, it may perhaps be admitted that this "applied also to the class of ships. But it would not "be consistent with the spirit of this agreement to "say that when the Indian Government specify that, "in addition to the vessel designed for special service "in the Persian Gulf, they only need two screw gunboats of about 755 tons, they shall be compelled to "have only one such vessel, and in place of the other, "two cruisers of 2,950 and 1770 tons respectively."

My Lords consider that the question of procedure has been settled by the Prime Minister's award—the view that the initiative should rest with India being only tenable under the restricted definition placed on the term "Indian purposes" by the Indian Government, and now decided to be incorrect.

The selection of ships made by the late Board of Admiralty has, in the opinion of my Lords, been fully justified by the definition of that term in the Prime Minister's award, and they hold that the interpretation attached to it by the Indian Government is the primary cause of the delay in settling the subsidy.

It is not open to question that the services implied in the term have been fully rendered at the expense of the Admiralty, and in the view of my Lords it would be unreasonable that India should gain and the Imperial Government suffer from an erroneous interpretation on the part of the former.

Further, my Lords consider that, by agreeing in January 1892, to "pay 50,000*l.* on account of this "(1891–92) year's payment without prejudice," and by basing that subsidy, since continued annually, on their interpretation of the Minutes of the Foreign Office Conference, the Indian Government have virtually recognised the arrangement as in force from the commencement of that year.

To sum up their views briefly, my Lords contend that the annual contribution due from India since the 1st April 1891 must be taken as 117,000*l.* (*i.e.*, excluding the repairs of the "Sphinx"), with the result that the following claim arises for arrears:—

	£
Total subsidy, 1891–92 to 1894–95, four years at 117,000*l.* (excluding repairs of "Sphinx") -	468,000
Less, paid by India, four years at 50,000*l.* - - - -	200,000
Balance due - -	268,000

Failing an agreement with India, they see no alternative but to submit this contention for the arbitration of the Prime Minister.

In the foregoing remarks, and in the calculation of what is due from India, my Lords have stated the correct result of the liability of India to contribute to the expense of the East Indian Squadron, but they are willing to recognise that, as intimated in paragraph 7 of your letter of 28th March, there may be under existing circumstances a limit to what India should be asked to pay.

The Admiralty do not think that it would be creditable to two great Departments of State, that a point which the Prime Minister considered could and ought to be settled by them should again come before him as a dispute on which it had been found impracticable to effect by mutual concession some reasonable settlement. Such a position should, in their opinion, be avoided if possible by both parties.

On their part, therefore, my Lords would be willing to consent to a very considerable concession in order to arrive at an amicable settlement of the matters in dispute, and are prepared, should the proposal meet the views of the Secretary of State for India in Council, to seek the consent of the Treasury to the following arrangement, viz.:—

The subsidy to commence from the 1st April 1891, and be limited to an annual payment of 100,000*l.* excluding repairs of "Sphinx," the arrangement remaining in force for ten years from that date.

The Admiralty to waive all claim for arrears beyond a payment during the present financial year of 17,000*l.* in addition to the subsidy of 100,000*l.*

The repairs of the "Sphinx" to the 31st March next to be defrayed by the Indian Government.

Failing an acceptance on the part of the Indian Government of the concession thus proposed, my Lords would with much regret see no alternative but to lay the entire claim of the Admiralty before the Prime Minister.

It must consequently be understood that this offer is made without prejudice.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 71.

INDIA OFFICE LETTER to ADMIRALTY of 26th June 1895, No. M 5224.

E 1636/95.

SIR,

I AM directed to acknowledge the receipt of your letter of 30th May, 1895, No. 2 E 1395/1689, and to acquaint you in reply that the Secretary of State for India in Council, though unable to concur altogether in the views of the Admiralty, is prepared, subject to the understanding indicated in the last paragraph of this letter, to accept the arrangement proposed by the Lords Commissioners, which he understands to be as follows:—

That all claims to arrears from 1891 to 31st March, 1895, shall be waived.

That from 1st April 1895 to 31st March 1896, India shall pay 117,000*l.* and the repairs of the "Sphinx" in India.

That from 1st April 1896 to 31st March 1901, India shall pay 100,000*l.* a year, and the repairs of the "Sphinx" in India.

As regards coal, India will pay the entire cost of coal used in the Persian Gulf, and of that consumed in other vessels when on services performed at the request of the Indian authorities.

2. Mr. Secretary Fowler, however, desires me to point out that, as a Royal Commission has since this correspondence began, been appointed to report on Indian expenditure and the apportionment of charge between the Governments of the United Kingdom and of India, for purposes in which both are interested, this arrangement cannot with propriety be considered as finally closed, until any recommendation which the Commission may desire to make on the subject has been duly considered.

I have, &c.
(Signed) HORACE WALPOLE.

No. 72.

ADMIRALTY LETTER to TREASURY of the 28th June 1895, No. E 1636/1995.

SIR,

I AM commanded by My Lords Commissioners of the Admiralty to forward, for the information of the Lords Commissioners of Her Majesty's Treasurg, the enclosed copies of correspondence between the India Office and this Department, subsequent to Lord Rosebery's award, relative to the subsidy to be paid by

India on account of Her Majesty's ships in Indian waters.

It will be seen that, subject to the approval of their Lordships of the Treasury, my Lords offered in the letter of the 30th ultimo, to accept the following terms, viz.:—

(1.) The subsidy to commence from the 1st April, 1891, and be limited to an annual payment of 100,000*l.*, excluding repairs of "Sphinx," the arrangement remaining in force for ten years from that date.

(2.) The Admiralty to waive all claim for arrears beyond a payment during the present financial year of 17,000*l.* in addition to the subsidy of 100,000*l.*

(3.) The repairs of the "Sphinx" to the 31st March next to be defrayed by the Indian Government.

In the India Office letter of the 26th instant, these terms have been accepted by the Secretary of State for India in Council, subject to the reservation that the matter cannot, with propriety, be considered as finally closed until any recommendation on the subject that may be made by the Royal Commission now inquiring into the financial arrangements between the two Governments has been considered.

My Lords see no objection to this reservation.

In making these proposals to the India Office, my Lords took into consideration the advantages which would arise from an early settlement of this long-outstanding question. They also bore in mind the present condition of the finances of India.

Under these circumstances, my Lords consider that this may be regarded as a settlement satisfactory to both Governments, and they invite the early concurrence of the Lords Commissioners of Her Majesty's Treasury.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 73.

TREASURY LETTER to ADMIRALTY of 29th June 1895, No. 10008/95.

E 1673/95.

SIR,

THE Lords Commissioners of Her Majesty's Treasury have had before them your letter of the 28th instant, No. 2 E 1636/1995, enclosing copy of a correspondence, subsequent to Lord Rosebery's award of February last, between the Lords Commissioners of the Admiralty and the India Office, respecting the subsidy to be paid by India for Her Majesty's ships in Indian waters.

My Lords approve of this subsidy being fixed as follows:—

	£	
For 1895–96	117,000 *plus* repairs of "Sphinx" in India.	
,, 1896–97	100,000	do. do.
,, 1897–98	100,000	do. do.
,, 1898–99	100,000	do, do.
,, 1899–1900	100,000	do. do.
,, 1900–1901	100,000	do. do.

The payment for the current year is the amount estimated for in the Navy Estimates of the year.

On condition of the above payments being made, all claims in respect of years prior to 1895–96 will be waived.

Should the Royal Commission on Indian Finance, now sitting, make any recommendation on the subject of the above subsidy, my Lords will, of course, be prepared to consider it.

I am, &c.
(Signed) FRANCIS MOWATT.

No. 74.

ADMIRALTY LETTER to INDIA OFFICE of 30th July 1895, No. 2 E 1673/2345.

SIR,

I AM commanded by My Lords Commissioners of the Admiralty to acknowledge the receipt of Sir H. Walpole's letter of the 26th ultimo, No. 5224, and, in reply, to state, for the information of the Secretary of State for India in Council, that the arrangement proposed by My Lords as to the subsidy payable in regard to Her Majesty's ships in Indian waters has been correctly set forth; it being understood that should any claims be outstanding for repairs of the "Sphinx," they will be defrayed by the Indian Government.

So far, however, as my Lords are aware, no such claims are outstanding.

I am to add that the arrangement has received the sanction of the Lords Commissioners of Her Majesty's Treasury, who will be prepared to consider any recommendation on the subject of the "Subsidy" which may be made by the Royal Commission on Indian Finance.

I am, &c.
(Signed) EVAN MACGREGOR.

No. 75.

ADMIRALTY LETTER to INDIA OFFICE of 24th October 1895, No. M 7623.

SIR,

I AM commanded by my Lords Commissioners of the Admiralty to transmit, for the information of the Secretary of State, copy of a letter, dated to-day, sent to the Commander-in-Chief of Her Majesty's ships, East Indies, communicating the conditions of the arrangement for the payment of a contribution by India on account of ships in Indian waters.

I am, &c.,
(Signed) EVAN MACGREGOR.

Enclosure.

LETTER to the COMMANDER-IN-CHIEF, East Indies, of 24th October 1895, No. M 7623.

SIR,

WITH reference to my communication of the 3rd August last informing you that a settlement has been arrived at, between my Lords and the Secretary of State for India in Council, as to the contribution to be paid by India in connexion with ships in Indian waters, I am commanded by my Lords Commissioners of the Admiralty to acquaint you that the conditions of the arrangement are as follows, viz.:—

(1) The subsidy payable by India is to be:—
For 1895–6, 117,000*l.*, plus repairs of "Sphinx" in India.
From 1st April 1896 to 31st March 1901, 100,000*l.*, plus repairs of "Sphinx" in India.

(2) The ships on which this subsidy is based are the
"Marathon," "Pigeon,"
"Brisk," "Sphinx."

(3) No claim is to arise in India in respect of any of these vessels except for coal and repairs of "Sphinx," and for coal for the other vessels when employed under requisition from the Indian Government. The cost of the foregoing should be defrayed by the Indian Government locally.

(4) The ships will be under your control and orders, but you are to comply with the wishes communicated to you by the Indian Government as to their employment.

(5) These ships are not to be employed without the consent of the Indian Government beyond the undermentioned limits, viz.:—
Indian waters, as defined in Article IV. of your Standing Orders of January 1895, viz., north of an imaginary line drawn from Cape Guardafui to Point de Galle, and thence south of the Nicobar Islands to Cape Salang.

It is observed that these arrangements modify the first 21 lines of Article IV. of your Standing Orders of January 1895.

I am, &c.,
(Signed) EVAN MACGREGOR.

SUB-APPENDICES.

Sub-Appendix No. 1.

Conference at Foreign Office, 26th March, 1890.

Extract from Revised Memorandum furnished to the Admiralty, with Letter dated 15th August, 1890, No. 12,225/90.

The Conference arrived at the following conclusion as regards the Indian contribution towards the East Indian Squadron:—

The basis of 70*l.* per annum per man is objected to by the Treasury and Admiralty as obsolete. The Indian Government is to be consulted as to the number and class of ships required in the Persian Gulf, and off the coasts of India, for Indian purposes. When that number is settled by the British and Indian Governments jointly, it will be arranged that the ships are not to be employed beyond certain limits, to be agreed upon, except with the consent of the Indian Government. They will be under the control and orders of the Naval Commander-in-Chief, to whom will be sent the wishes of the Indian Government, with which it will be his duty to comply. India is to pay the whole cost, effective and non-effective, of them.

Special reference was made in this connection to the example of the Australasian Colonies (which are contributing liberally for the protection of their floating trade).

Nothing was said as to what the subsidy for 1890–1 should be. It is assumed in the Navy estimates for that year that it will be—

	£
Wages - £28,600 Victuals - 9,900	- 38,500
Percentage on cost of "Sphinx" in Persian Gulf -	- 3,100
	£41,600

as recommended by the Committee of 1887. Whether any alteration can be made in this will depend on how soon the proposed negotiations can be concluded. Mr. Forwood will draw up a memorandum on the subject.

Sub-Appendix No. 2.

Letter from the Government of India to the Secretary of State for India, of 25th August, 1890 (No. 17).

My Lord,

We have the honour to acknowledge the receipt of your Lordship's Military Despatch, No. 51, dated the 6th March, 1890 (M 1186), forwarding copy of correspondence with the Treasury on the subject of a proposal to increase the subsidy paid by India for the maintenance of a naval force in Indian waters, also of your Despatch, No. 95 (Financial), dated 12th June, 1890, enclosing a summary of the conclusions arrived at by the Conference which assembled at the Foreign Office on the 26th March last, to discuss the question of the contributions payable by India towards the naval squadron in Indian waters, and on account of diplomatic and consular establishments in China and Persia, together with a copy of the correspondence between the India Office and the Treasury on these matters.

2. In the despatch first quoted, the Government of India are asked for their opinion on the subject raised in the enclosed correspondence; and from the further correspondence forwarded with your despatch of the 12th June, we understand that, as regards the contribution towards the cost of the East India Squadron, your Lordship desires an expression of our views on two questions, which practically cover the whole of this subject.

3. The questions are:—

Firstly, the method on which it is proposed the Indian contribution shall in future be based;

Secondly, the number and class of ships required in the Persian Gulf, and off the coasts of India, for Indian purposes.

With regard to the first point, the method by which the Indian contribution is in future to be calculated, we observe the Treasury and the Admiralty consider the basis of 70*l.* per man per annum to be obsolete. To this we can only reply that the present agreement dates from 1888, when it was settled, on the recommendation of an inter-departmental committee, that the number of ships on account of which a subsidy is paid by the Government of India should be reduced from six to four, and that India should pay the sum of 38,500*l.*, which was arrived at on the above basis, for these four ships for the year 1888–9, with the addition of certain extra charges.

4. This arrangement, which we consider to be on the whole fair and satisfactory, was continued without any objection on the part of the Treasury or the Admiralty, through the next financial year, 1889–90, and we observe with satisfaction that your Lordship does not agree in the opinion expressed by the Lords Commissioners of the Treasury that India should be required to pay the whole cost of the four ships usually employed in Indian waters, or that there is any reason for disturbing the agreement of 1869 as revised in 1887–8.

5. The manner in which the Treasury desire the cost should be calculated in future is shown in the enclosure to No. 3 of the correspondence attached to your despatch of 6th March. It appears from this statement that every item of the expenditure on the ships in question, including non-effective as well as effective charges, is to be borne by India. In 1888, when the original agreement was revised, a similar method of calculating the Indian contribution was contended for, but the Lords Commissioners then recognised that an abatement might have to be made from the total charge, in respect of the duties that must be occasionally performed by the vessels for Her Majesty's Government.

6. This question of abatement is, in our opinion, a very important one. It depends, however, on the amount of control which the Government of India is to possess over the vessels for which India is called upon to pay. If the vessels are to be as completely at the disposal of the Government of India as are the British troops serving in this country, it is not unreasonable that India should bear their full cost; if a disturbance of the existing agreement were unavoidable, then it might be useful to consider whether such an agreement could be excepted, although it would, we think, be better to leave matters on their present footing.

7. As to the second question, the number and class of ships required for Indian purposes, we desire to point out that the four vessels whose cost is shown in the statement furnished by the Treasury, although doubtless those chiefly employed during the past year in Indian waters, are not in themselves of the types most suitable to our requirements. With the exception of the "Sphinx," built for service in the Persian Gulf, they are all unnecessarily large, and therefore expensive. The "Turquoise," for instance, is a corvette of obsolete type and inconveniently great draught of water. She is old, slow and inefficient, and yet for this vessel Indian revenues would be charged, according to the Treasury calculation, a sum approaching the total subsidy paid under the arrangements now in force.

8. After taking into consideration all the duties on which the ships may have to be employed, we do not consider their number can be conveniently reduced below the present strength of four. But smaller and therefore cheaper vessels, provided they are of modern type, would be more efficient for Indian purposes than those hitherto supplied, and the particular class we should select under the arrangements proposed by Her Majesty's Government would be gunboats of the "Pigeon" or "Redbreast" class The total cost of three of these together with the "Sphinx," the services of which we should be willing to retain for the present, would not greatly exceed the subsidy now paid. We consider, however, that a limit should be placed on the length of time individual vessels are to be paid for, and that no ship whose cost was charged to India should be re-commissioned more than once without the consent of the Government of India being obtained, and opportunity afforded for making a fresh selection.

9. We take this opportunity of again drawing the attention of Her Majesty's Government to the general condition of ships forming the East Indian Squadron. We acknowledge that since we first addressed your Lordship on this subject, in our Marine Despatch

No. 14, of 29th July 1887, there has been an improvement in the class of vessels sent into the Indian seas. Of the twelve ships in the squadron, six, in addition to the "Sphinx," are of modern type, with powerful armaments, and fairly satisfactory speed. But the remaining five are old and practically useless. Among the latter are the "Ranger" and the "Kingfisher," against the re-commissioning of which we protested in the despatch above quoted, as also in our Despatches, No. 5 of the 9th April 1888, and No. 12 of the 10th August, 1888, and it is with regret we observe that they are still on the station. We trust the relief of these vessels, as also of the "Turquoise" and "Garnet," may not be long delayed, and that they will be replaced by serviceable ships.

SUB-APPENDIX No. 3.

DESPATCH to the GOVERNMENT OF INDIA dated 5th February 1891.

In continuation of my Financial Despatch, No. 171, of 14th August 1890, I forward herewith, for the early consideration of your Lordship's Government, copy of correspondence noted in the margin,* regarding the strength and cost of the East India Squadron.

2. In your Lordship's Despatch, No. 17, of 25th August 1890, the opinion is expressed that the number of ships cannot be conveniently reduced below the present strength of four, but that, exclusive of the "Sphinx," they might be of a smaller, and, therefore, cheaper type, such as gunboats of the "Pigeon" or "Redbreast" class. Since that despatch was written, however, your Lordship has received my Despatch, No. 191, of the 6th November 1890, informing you of the final arrangements for manning the floating defences of the Indian harbours. Possibly, in view of the very considerable additions to the force available for the defence of Indian harbours which that scheme will effect, and of the fact that the squadron will hereafter be under the control of the Indian Government, your Government may find it practicable to reduce your demands from four to three ships of moderate size.

3. It must be borne in mind that under the Australian agreement, on the lines of which the Indian contribution will be fixed in future, no reduction is to take place in the normal strength of the naval force employed on the Australian station. The same principle will, no doubt, be followed as regards the force on the East Indian station.

4. I shall be glad if your Excellency will let me have your reply as soon as may be convenient.

SUB-APPENDIX No. 4.

MEMORANDUM of the ACCOUNTANT-GENERAL OF THE NAVY on the CONTRIBUTION to be paid for SHIPS in INDIAN WATERS, dated 28th February 1891.

The following is an extract from Memorandum of conclusions arrived at at the Conference at the Foreign Office, on the 26th March 1890:—

"*Indian Contribution to the East Indian Squadron.*"

"The basis of 70*l.* per annum per man is objected to by the Treasury and Admiralty as obsolete. The Indian Government is to be consulted as to the number and class of ships required in the Persian Gulf and off the coast of India for Indian purposes.

"When that number is settled by the British and Indian Governments jointly, it will be arranged that the ships are *not* to be employed beyond certain limits to be agreed upon except with the consent of the Indian Government. They will be under the control and orders of the Naval Commander-in-Chief, to whom will be sent the wishes of the Indian Government, with which it will be his duty to comply. India is to pay the whole cost, effective and non-effective, of them.

"Special reference was made in this connection to the example of the Australasian Colonies (which are contributing liberally for the protection of their floating trade)."

1. The points for consideration taken in the order they were dealt with are—
   (1) The number and class of ships to be allotted for the service of India;
   (2) The control of India over their movements;
   (3) The contribution to be paid to the Imperial Exchequer.

Under the present arrangement there are no special ships, with the exception of the "Sphinx," allotted. So long as there are four ships on the station the whole subsidy is payable.

In the statement (pages 13 and 14) prepared in July, three typical ships, besides the "Sphinx," have been taken for the purpose of exhibiting the contribution which should reasonably have been paid by India—viz., say 103,000*l.* for the ships hitherto on the station, in lieu of the sum of 41,600*l.* actually received.

The consent of India to the selection of those to be specially allotted in the future is no doubt necessary under the conclusions of the Conference, but it may fairly be contended that such consent shall not be withheld to ships fit for the service of a modern type and high speed.

Of the ships proposed to be allotted, the "Sphinx" has been already accepted for service in the Persian Gulf. The remaining three are the "Marathon," "Pigeon" and "Brisk."

A statement (No. 4, page) is attached showing their tonnage, speed, armaments, etc., as compared with those of the typical ships before mentioned—viz., the "Algerine," "Mariner," and "Turquoise."

In a recent letter, dated the 3rd February, the India Office, while accepting the "Pigeon," has objected to the "Marathon" and "Brisk" as too large and costly, and probably not so suitable for the work required as the "Pigeon" and "Redbreast." On this the Financial Secretary remarks that "India looks rather to be "furnished with vessels for police duties than to bear "a part of the cost of vessels for general defence "purposes. They pay for the Army in full, therefore "to general sea defence they should contribute." The First Lord considers it unreasonable to suppose that we are to keep down the Indian contribution by having nothing but small gunboats on the station.

2. This is an executive question.

3. The Conference distinctly settled the basis on which the contribution to be paid by India shall be calculated. "India is to pay the full cost, effective and non-effective."

Statement (No. 2, p.) shows the calculation by which the contribution claimed from the India Office, in Admiralty letter of 15th January, viz., 117,000*l.*, was arrived at in respect of the ships to be allotted to India from the 1st April next.

In this statement, besides the cost of maintenance and non-effective charges, are included—

Interest on first cost, at 3 per cent.
Annual charge for renewals of hulls, etc.
Do. do. armaments.

The total amount of these charges for the four ships is 29,405*l.*

Since that statement was forwarded, a further and closer calculation has been made, viz., that of the annual payment, with interest at 3 per cent. per annum, required to provide the necessary sum for renewing hulls, etc., boilers, and armaments, at the end of the periods when these will respectively be worn out.

As a mode of calculation, this appears preferable and simpler, but the result is practically the same, viz., 30,047*l.* per annum.

A further statement (No. 3, p.) has accordingly been prepared, embodying this calculation with the other items of charge.

As mentioned in the Admiralty letter of the 15th January (No. 9, page), no charge for coal has been included in these statements; the arrangement, proposed in accordance with the agreement of 1885, being that India shall pay the entire cost of coal in the Persian Gulf, and of that consumed in the other vessels when on services performed at the request of the Indian Authorities. This leaves a considerable charge for coal to be borne by Imperial funds.

In fact the contribution practically discharges the liability of India for services actually rendered, but includes nothing for the general protection to her shores and commerce afforded by the squadron as a whole.

There remains to be dealt with, the objection of India to this calculation as charging them with about 10,000*l.* more than if the basis of charge against the Australian Colonies had been adopted. The answer to this is that the cases are not identical. The Australasian subsidy

is based on a special agreement embodied in an Act of Parliament in which not replacement but 5 per cent. on first cost is fixed. On the other hand, the Conference has settled that India is to pay the full cost, which it will not do unless the Imperial Government is reimbursed for first cost in full.

(Signed) G. FITZGERALD.

28th February, 1891.

ABSTRACT OF STATEMENTS.

No. 1.—Statement showing the estimated first cost and annual cost for maintaining the "Turquoise," "Mariner," "Algerine" and "Sphinx" in Indian waters.

No. 2.—Statement showing the first cost and estimated annual charge for renewal and maintenance, together with interest on first cost, of the "Marathon," "Brisk," "Pigeon" and "Sphinx" in Indian waters.

No. 3.—Statement showing the first cost and estimated annual charge for renewal and maintenance, together with the annual payment to repay first cost with 3 per cent. interest, of the "Marathon," "Brisk," "Pigeon" and "Sphinx" to be employed in Indian waters.

No. 4.—Statement showing the comparison of tonnage, speed, armaments, etc., of certain ships in Indian waters.

---

SUB-APPENDIX No. 5.

LETTER from the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA, of the 13th May, 1891 (No. 6).

MY LORD,

WE have the honour to acknowledge the receipt of your Lordship's Military Despatch, No. 16, of the 5th February, 1891 (M 11519/90), and paragraph 6 of Despatch No. 31, of 19th February, 1891 (M 473), forwarding for our consideration correspondence with the Lords of the Treasury and with the Lords Commissioners of the Admiralty, regarding the strength and cost of the subsidized vessels belonging to the East India Squadron which are maintained for service in Indian waters.

2. After having given this question our most careful attention, and having taken into consideration the circumstance that a vessel of the defence flotilla will ordinarily be available at Bombay for service when required, as well as the point mentioned by your Lordship that the Squadron of Her Majesty's ships in Indian waters will hereafter be under our control, we are of opinion that the number of subsidized vessels in the squadron may be reduced from four to three. One of these ships will be stationed in the Persian Gulf, one at Aden, and one in the Bay of Bengal, while the ship hitherto supposed to be in reserve at Bombay will be replaced by the defence gunboat, which will be in commission under the arrangements about to come into force.

3. As to the class and cost of the vessels required by India, we have already informed your Lordship that we are willing to retain the "Sphinx," as she is a fairly efficient ship, and was specially built for service in the Persian Gulf. But as regards the remaining vessels, we are constrained to record our strong objection against any attempt to impose on India such ships as the "Marathon," costing, according to the Admiralty calculation, no less than 47,427*l.* a year, and the "Brisk," costing 36,299*l.* Ships of this size are not suited to our special requirements, and are entirely unsuitable for the service of India. We have already pointed out that the type of vessel which we prefer is the small light draught gunboat of the "Pigeon" class, costing, according to the Admiralty calculations, 16,513*l.* yearly.

4. With regard to the manner in which the Indian contribution on account of the Royal Navy Squadron is

to be calculated in future, we observe that your Lordship has informed the Admiralty that there is no sufficient reason for charging India at a higher rate than the Australasian Colonies. In this opinion we fully concur, and desire to add that we can see no necessity for treating the arrangement made with India as permanent. In this matter we should prefer that the lines of the Australasian agreement should be followed, and the arrangement now about to be entered into considered terminable at the end of five or ten years. We should further remark that the subsidy payable by India for the services of the "Sphinx" and two gunboats of the "Pigeon" class, if calculated according to the Australasian agreement, would amount to 49,675*l.* per annum, and that we are prepared to accept a contribution fixed at this rate.

5. Finally, with respect to the important question of control, we should be glad to be favoured with a clear definition of what that control is to be, and we take the opportunity of suggesting that a specific contract should be drawn up, the terms being forwarded for our consideration before acceptance. Any such contract should include a clause that none of the subsidized vessels is to be removed from its ordinary station without the sanction of the Government of India having been previously obtained.

Sub-Appendix No. 6.

Memorandum of the First Lord of the Admiralty, dated 28th November, 1891, relative to the Contribution to be paid by India on Account of the Vessels stationed in Indian Waters.

On the abolition of the Indian Navy in 1862 it was arranged that the naval defence of India, as well as the services required in the Red Sea, upon the East Coast of Africa, and in the Persian Gulf, should be undertaken entirely by vessels of the Royal Navy.

In 1869 the Admiralty suggested that the time had arrived for adjusting the proportions in which the cost of the naval squadron on the East Indian Station should be borne by naval votes and the revenues of India, and proposed that the latter should bea the cost of maintaining the ships employed in the Bay of Bengal, the Arabian and Persian Gulfs, and the Red Sea. It was further suggested that, although the exact method of computing this charge would be open to consideration, a capitation rate of 70*l.* per annum for each man's pay and provisions should be taken as the basis—the charge to be computed on the number of men who would probably form the crews of the six vessels to be maintained in Indian waters, without any reference to cost of maintenance of ships or of non-effective charges.

The final arrangement was:—

Indian Revenues to pay for 1,000 men at 70*l.*= 70,000*l.* per annum.
Shore expenses of crews when employed under Indian requisition.
Free use of dockyard at Bombay.
The three ships exclusively employed in the Persian Gulf to be repaired and coaled at the expense of Indian revenues.
The Admiralty to establish the fact of six ships being at the disposal of India, a proportionate reduction in the subsidy being made if the ships should not have been kept up.

The full contribution became payable from the 23rd September, 1869.

In 1881 the Treasury called attention to the temporary character of the arrangement, and invited the Admiralty to take into consideration the basis on which it should be calculated.

This resulted, after some correspondence, in the formation of a Joint Admiralty and India Office Committee, which had no authority to reconsider the rate of 70*l.* a head, but only the question of diminished charge for reduction of two ships, and reported, in 1887, as follows:—

(i.) Four vessels to be employed continually in Indian waters, one being always in the Persian Gulf.
(ii.) The subsidy to be based on the same rate of 70*l.* per man, but calculated on 550 men only, and amounting to 38,500*l.* per annum.
(iii.) A further payment of 5 per cent. on first cost, together with the cost of repairs, of the vessel employed in the Persian Gulf towards replacement. Certain other stipulations as regards coal on special service, deduction for vessels below the complements, &c., &c., were also made.

Under this arrangement the contribution to naval funds was:—

	£
Subsidy - -	38,500
5 per cent. on first cost of "Sphinx" - -	3,100
	£41,600

a reduction, as compared with the former subsidy, of 28,400*l.*

The objections of the Treasury to this arrangement were summarized in a letter from that department to the India Office of the 30th August 1890:—

(i.) That the aggregate crews of the four ships were under-estimated.
(ii.) That 70*l.* does not now represent the cost of the wages and victuals.
(iii.) That the charge for pay and victualling does not represent so large a proportion of the whole cost as it did in 1869, the cost of constructing, arming, and equipping having so largely increased.
(iv.) That it is unreasonable to charge India with a percentage of the original cost of the single vessel in the Persian Gulf, and nothing of the kind for the other vessels of the squadron.
(v.) To split charges for these vessels on the ground of divided interests or occasional absences appeared inconsistent, India not being called on to contribute anything towards the cost of protecting her trade outside Indian waters.

This expression of opinion was in reply to a letter from the India Office of the 6th March 1890, but, in the interval, the subject had been considered at a conference at the Foreign Office, on the 26th March 1890. The following is an extract from a memorandum recording the conclusions arrived at, viz.:—

"Indian Contribution towards the East Indian Squadron.

"The basis of 70*l.* per annum per man is objected to by the Treasury and Admiralty as obsolete. The Indian Government is to be consulted as to the number and class of ships required in the Persian Gulf, and off the coasts of India, for Indian purposes. When that number is settled by the British and Indian Governments jointly, it will be arranged that the ships are not to be employed beyond certain limits to be agreed upon, except with the consent of the Indian Government. They will be under the control and orders of the Naval Commander-in-Chief, to whom will be sent the wishes of the Indian Government, with which it will be his duty to comply. India is to pay the whole cost, effective and non-effective, of them.

"Special reference was made, in this connection, to the example of the Australasian Colonies (which are contributing liberally for the protection of their floating trade).

"Nothing was said as to what the subsidy for 1890-91 should be. It is assumed in the Navy Estimates for that year that it will be—

	£	£
"Wages - - -	28,600	38,500
"Victuals - - -	9,900	
"Percentage on cost of 'Sphinx' in Persian Gulf - -		3,100
		£41,600

as recommended by the Committee of 1887. Whether any alteration can be made in this will depend on how soon the proposed negotiations can be concluded. Mr. Forwood will draw up a memorandum on the subject."

Mr. Forwood accordingly prepared a revised statement showing the estimated annual cost, including interest on outlay and waste, of the four ships considered to be particularly detailed for Indian service, viz.:—the "Turquoise," "Mariner," "Algerine," and "Sphinx." This annual cost, including the repairs of the "Sphinx" defrayed by India on the spot, amounted to 103,577*l.*, in place of the 41,600*l.* then payable.

In the meantime, and more especially in Despatches No. 14 of the 29th July 1887, and No. 117 of the 25th

August 1890, the Indian Government had pressed upon the Admiralty the substitution of modern and more powerful vessels for the older types then on service in the East Indian Squadron. Four vessels, of which one, the "Turquoise," was included in the ships before mentioned, were particularly objected to.

These vessels have since been removed and the squadron reconstituted, so that, in a letter dated 15th January 1891, the Admiralty were able to inform the India Office that, after consideration of the despatch of the Indian Government and to meet the objections to the ships on the station, it had been arranged to allot from the 1st April 1891, for the service of India, in addition to the "Sphinx," three vessels of modern type and high speed, viz., the "Marathon," "Brisk," and "Pigeon."

This substitution of vessels necessitated a fresh calculation of the amount of contribution payable by India on the basis settled at the Conference, viz.:— "India is to pay the whole cost, effective and non-effective."

The revised contribution which the Admiralty asked for in this letter was 117,000*l.*, in addition to 4,000*l.* paid in India for repairs of "Sphinx," as against 103,577*l.* shown in Mr. Forwood's memorandum.

It was arrived at by a more careful and accurate calculation, and that it was not less favourable to Indian interests is shown by the following comparison :—

Mr. Forwood's Memorandum.

For four ships 103,577*l.*, being 33·65 per cent. on first cost of 307,782*l.*

Revised Subsidy.

For four ships 117,000*l.*, being 31·46 per cent. on first cost of 384,559*l.*

Acceptance of this proposal was demurred to by the India Office in letter of the 3rd February 1891, on the ground that the Government of India had first to be consulted as to the number and class of ships required.

On the 6th March, at the suggestion of the Treasury, the Admiralty proposed that a Joint Conference of Admiralty and India Office Representatives should consider the composition of the squadron, and the method of calculating its cost.

This was declined by the India Office until an expression of opinion had been received from the Indian Government.

A despatch, containing the views of the Indian Government, was forwarded to the Admiralty by the India Office on the 16th May last.

The Indian Government proposed :—

(i.) That the vessels allotted should be reduced from four to three, of which two should be small gunboats.

(ii.) That the subsidy should be based on the same calculations as that payable by the Australasian Colonies.

[These proposals would reduce the subsidy from 117,000*l.* to 45,565*l.* The annual cost of the three ships selected by India, on the basis of charge adopted by the Admiralty, would be 54,210*l.*]

(iii.) The arrangement to be for five or ten years.

(iv.) A definition of the control to be exercised by India over the vessels.

(v.) That no reduction should take place in the normal strength of the naval force employed in the East India Squadron.

The Admiralty replied to this letter on the 17th November, and stated their reasons for urging an acceptance of their proposals, or the appointment of a Conference.

To sum up the case briefly, it may be stated that the main points for settlement are :—

(i.) The control to be exercised by India over the ships.

(ii.) The number and class of ships to be allotted to the service of India.

(iii.) The contribution to be paid to the Imperial Exchequer.

As regards control, the Admiralty has been given to understand that the Secretary of State for India in Council is prepared to adhere to the terms agreed upon at the Conference, and would be satisfied with an assurance to this effect.

The "selection of ships" and the "amount of Contribution," although distinct, the one being an "Executive" and the other a "Financial" question, must, to some extent, be considered together, the calculation of the subsidy being based on the ships selected.

Obviously, the initiative in the selection of the ships necessarily rests with the Admiralty, who must consider the requirements of the station as a whole, and the proportion which the ships, specially selected for Indian Waters, should bear to the full strength of the squadron. The letter of the Foreign Office Memorandum undoubtedly requires the consent of the Indian Government to the selection, but its spirit would equally forbid that consent to such selection should be unreasonably withheld.

Neither the Treasury nor the Admiralty consider that India in the past has contributed her proper share towards the maintenance of the East India Squadron, upon whom has devolved the duties and responsibilities of the Indian Navy, more especially in view of the fact, as before stated, that the Indian Government has constantly urged on the Admiralty the provision of newer, more powerful, and consequently more expensive ships.

But so far from evincing a disposition to bear any portion of the increased cost in consideration of the greater security afforded to Indian commerce, the Indian Government is seeking to minimise its contribution by reducing the number of vessels, and by selecting the two smallest gunboats on the station. In fact, it would only pay for police duties performed by small vessels, and in no way contribute towards the cost of vessels for general defence purposes.

In the opinion of the Admiralty this course would not be in accordance with the intentions of the Conference.

The Admiralty cannot admit the proposal to assimilate the calculation to that of the Australasian subsidy.

The latter was based on a specific agreement embodied in an Act of Parliament. In it 5 per cent. on first cost and not replacement was provided for. India, on the centrary, is bound by the terms of the Conference, to pay the full cost of the vessels, effective and non-effective. It may also be added that the two arrangements differ materially in other respects.

G. B.

SUB-APPENDIX No. 7.

Memorandum of the India Office, dated 23rd December 1891.

NAVAL CONTRIBUTION.

1. It is urged, on the part of the Admiralty, that the initiative in the selection of the ships necessarily rests with them, as they must consider the requirements of the station as a whole, and the proportion which the ships specially selected for Indian Waters should bear to the full strength of the squadron.

This appears to reverse the order of the procedure. By the terms of the Foreign Office Memorandum, the Indian Government was first "to be consulted as to "the number and class of ships required in the Persian "Gulf and off the coasts of India for Indian purposes." It can hardly be denied that the initiative as to what is required "for Indian purposes" must rest with the Government of India. When their opinion as to their requirements should have been given, the Memorandum provided that the settlement of the number was to rest with the British and Indian Governments jointly; and, though not expressed, it may perhaps be admitted that this applied also to the class of ships. But it would not be consistent with the spirit of this agreement to say that, when the Indian Government specify that, in addition to the vessel designed for special service in the Persian Gulf, they only need two screw gunboats of about 755 tons, they shall be compelled to have only one such vessel, and, in place of the other, two cruisers of 2,950 and 1,770 tons respectively.

When the agreement of 1869 was put in force, three small gunboats were considered suitable for the Persian Gulf; for service elsewhere there were the "Cossack" (1,296 tons), the "Bullfinch" (663), and the "Lynx" (464). Adequate provision has been made for the service of the Persian Gulf; and, as the Government of India find that only two ships are required for service outside that Gulf, instead of three, there is nothing unreasonable, as to the class of vessel, in their proposing to have two "Pigeon" gunboats (755).

2. It is urged that, in the past, India has not contributed her proper share towards the maintenance of the East India Squadron, upon which have devolved the duties and responsibilities of the Indian Navy.

At the Foreign Office meeting it was recognised that, whatever vessels were required for Indian purposes, India should pay the whole cost of them, effective and non-effective. This is not disputed; but it was not admitted that the contribution of India should necessarily be increased. On the contrary, it was pointed out at the time that a smaller force might very probably be demanded.

3. The Government of India are said to have constantly urged on the Admiralty the provision of newer, more powerful, and, consequently, more expensive ships; and the Letters of 29th July 1887, No. 14, and 25th August 1890, No. 17, are specially quoted in support of this point.

What the Government of India complained of was the inefficiency of the ships "from age, want of speed, weakness of armament, and antiquity of type."* The vessels were "by no means fully efficient even for the police of the seas against slave traders and pirates;" they were "virtually worn out when coming on to the "station, and cost a needlessly large sum in repairs "and refit."† They were "all unnecessary large, and therefore expensive." One ship was "of obsolete type "and inconveniently great draught of water; she is old, slow, and inefficient." They required "smaller, "and therefore cheaper, vessels, provided they are "of modern type," particularly "gunboats of the 'Pigeon' or 'Redbreast' class." The Government of India, therefore, are not now selecting the two smallest gunboats on the station merely to reduce their payment, but are asking to have such vessels as they have repeatedly requested as being those best suited for Indian purposes.

They expressly state that ships of the size of the "Marathon" are not suited to their special requirements, and are entirely unsuitable for the service of India.

4. A reason for India bearing a portion of the increased cost of the squadron is said to be "the greater security afforded to Indian commerce."

The Indian Squadron is designed for the protection of the coasts of India, not for the security of Indian commerce. It was laid down in 1861, when the duty of guarding Indian waters was undertaken by the Admiralty, that the latter must rest with the British Government, as previously (*see* paragraphs 3 to 5 of the India Office Letter to the Treasury of 6th March 1890). It is true that, in the Foreign Office Memorandum, as a ground for claiming from India the whole cost of the vessels needed for Indian purposes, it is said that "special reference was made in this connexion to the "example of the Australasian Colonies (which are "contributing liberally for the protection of the floating "trade)." But, on referring to the Australasian agreement, it will be found that the colonies were only to contribute towards the cost of the additional force needed for the protection of the floating trade in Australasian waters, and that it was expressly provided that no reduction was, in consequence thereof, "to "take place in the normal strength of Her Majesty's "Naval Force employed on the Australasian station."

The Australasian agreement had its origin in a desire expressed by the Colonies that the squadron in those waters should be increased for the protection of the floating trade. That increase the Admiralty were unable to provide, having regard to the responsibilities elsewhere, without increasing the Naval Estimates, and thus throwing a burden on the taxpayers at home, which they would certainly resist.

(*See* Proceedings of the Colonial Conference in 1887.)

The East India Squadron has not been increased, it has merely been made efficient; and, in 1860, before the Indian Navy was abolished, there were, it is believed, as many Royal Navy ships on the East Indies Station as there are now. At that time India paid nothing.

5. The proposal of the Government of India to pay only for police duties performed by small vessels, and in no way to contribute towards the cost of vessels for general defence purposes, is held not to be in accordance with the intention of the Conference.

The Memorandum shows that by the Conference the payment towards the cost of the Naval Squadron was limited to that which was necessary "for Indian purposes." As regards the general defence, India has undertaken liabilities amounting to 60,000*l.* a year for the manning and maintenance of her floating defences, and has provided two turret-ships, two gunboats, and several torpedo boats from her own funds. These vessels are to be under the command of the admiral commanding-in-chief; and it is obvious that the effect of this large addition to the squadron at the expense of India is to liberate for the protection of Indian commerce a much larger force than would otherwise be available.

One of the arguments used by Sir H. Holland at the Colonial Conference of 1887 was that, if the agreement were carried out, the colonial expenditure on local defences would admit of considerable reduction owing to the permanent addition of seven ships of war to the Australasian station. He contended that the naval contribution would be highly economical in proportion to the defensive advantages it would confer. That is certainly not the case with the Indian defences, which were fully provided for (though not yet in active operation), even before the revised contribution of 1887 was fixed.

6. The Admiralty decline to admit the proposal to assimilate the calculation to that of the Australasian subsidy, in which 5 per cent. interest is charged on first cost, without any addition for replacement.

The argument at the Foreign Office meeting was that India ought to be charged like Australia; and no sufficient reason is now shown for making India replace the vessels, as well as pay interest on the capital cost. The charge is the less proper, because, in the Australasian case, there was a positive increase of the Navy, while that has not taken place for India except in the instance of the "Sphinx," for which India has hitherto paid a charge for depreciation.

Sub-Appendix No. 8.

Minutes of Committee held at the Admiralty in January 1892.

Subsidy to be paid by India for Ships in Indian Waters.

Meeting of Committee held at the Admiralty on the 11th January 1892.

Present: Right Honourable A. B. Forwood, M.P.; Rear-Admiral F. G. D. Bedford, C.B.; Sir Gerald FitzGerald, K.C.M.G.; A. Godley, Esq., C.B.; H. Waterfield, Esq., C.B.; Major-General O. R. Newmarch, C.S.I.; Williams Cuming, Esq., acting as Secretary.

It was agreed:—

1. That India will, before the 31st March next, pay 50,000*l.* on account of this year's payment, without prejudice.

2. That the Conference at the Foreign Office should form the basis of discussion, and not the pre-existing arrangement.

3. The Treasury Letter of the 24th December 1891, No. 17,972, addressed to the Admiralty, but not communicated to the India Office, was then read, viz.:—

"The Lords Commissioners of Her Majesty's Treasury have had before them your letters of the 17th ultimo, and 15th instant, Numbers 2/E., 951/3040, and 2220/91, enclosing copies of correspondence between the Lords Commissioners of the Admiralty, and the Secretary of State for India in Council, respecting the contribution to be paid by India on account of Her Majesty's Ships stationed in Indian Waters and the Persian Gulf.

"The conclusion at which this correspondence arrives is, that the controversy should be referred to a third person of authority and experience for arbitration, and in this proposal my Lords entirely concur. They would point out, however, that, if the reference is to be limited in the manner indicated in the last paragraph of Mr. Godley's letter of the 11th instant, no useful object can be attained by making it. If the Secretary of State for India in Council premises that on no consideration will he agree to the amount of contribution expected by the Admiralty, and announced in the Navy Estimates for 1891-92, and that the only question to be discussed is the number of vessels required for Indian purposes, those purposes being defined in a previous part of the letter as the Maritime Police of the Coast, and the repression of piracy, and of the local slave trade, the arbitration will be nugatory.

"My Lords are most anxious for the arbitration if it be extended to the question of what are the services of which the contribution for the Indian Squadron is to be in aid. In the view of this Department, when the

* Letter of 1887. † Letter of 1890.

British Government took upon itself all the duties formerly discharged by the Indian Navy in the whole Indian Ocean, whether of general defence, of protection of commerce, or of suppression of the slave trade, the intention was that India should contribute according to her means towards all those services. This is not the view of the Indian Government, as my Lords are well aware. But let this be the first question to be submitted to arbitration. When it has been decided what are the services or purposes to be embraced by the contribution, it will be a comparatively easy matter to express it in the form of a given number of ships, the whole cost of which is to be paid for by India.

"My Lords hope that the First Lord of the Admiralty will press the Secretary of State for India in Council to agree to an arbitration on these lines."

4. The representatives of the Indian Government claim that the terms of the minute of Conference limit the liability of India to pay only for such vessels as are jointly considered necessary for Indian purposes, viz,, service in the Persian Gulf and off the coasts of India.

5. The Admiralty claim that so to limit the words "Indian purposes," is not a correct interpretation of the conclusions arrived at by the Conference, and that they have a broader and wider significance, comprising the general protection of India, her trade, and her coast.

6. The representatives of India urged that the Conference took as a starting point the capitation rate of 70*l.* as being insufficient, and decided that India should pay the whole cost, effective and non-effective, of the vessels employed for Indian purposes. And they pointed out that no reference was made in the memorandum of the Conference to the general protection of India and her trade. They also mentioned the payment of the full cost of the Indian flotilla, as largely increasing India's contribution to the Imperial naval defence.

7. It was urged in reply that these vessels formed a purely local and first defence, and were not in substitution of the seagoing squadron.

8. Attention was called to the Indian Government having remonstrated against the character of the vessels comprising the East Indian Squadron, and to the Admiralty in consequence altering its composition, as evidence of a wider claim to its services than the limit proposed to be given to the minutes of the conference. The reply was to quote the words of the despatches from India, as showing that the vessels in the squadron were insufficient for general naval purposes, and especially unsuitable for Indian purposes.

9. It having been stated that objection had been made to the "Turquoise," as she could not steam from Bombay to Aden against the monsoon, Admiral Bedford gave it as his opinion that the gunboats of the "Pigeon" type, proposed to be regarded as vessels for Indian waters, were also unsuitable under such circumstances to make such a voyage.

10. The Admiralty urged that at least one more powerful vessel, such as the "Marathon" or "Brisk" class, was necessary. On this point the Indian representatives, accepting Admiral Bedford's opinion as a professional one on the power of the new gunboats of the "Pigeon" type, agreed to send a telegram as follows:—

"Your Marine Despatch, No. 6, of 13th May 1891, says two gunboats only needed besides 'Sphinx.' Former letter complained 'Turquoise' could not steam to Aden in monsoon. Admiralty suggest 'Pigeon' type also not sufficient at all seasons for same reason, and consider one should be 'Brisk' type. What do you say? I shall be glad of a very early reply."

11. Attention having been called to India reducing her wants from four vessels to three (including the "Sphinx"), being a further reduction on that previously made, viz., from six to four, it was pointed out that the Indian Government considered that, as one of the two new gunboats in their defence flotilla would always be in commission, it virtually supplied an available vessel at Bombay, and thus limited their demand to two gunboats and the "Sphinx."

12. The question was left as follows, viz.:—

(*a.*) To determine whether a "Brisk" class vessel should be substituted for one gunboat "Pigeon" class.

(*b.*) To settle whether one or two gunboats were required in addition.

Second Meeting of the Committee, held at the Admiralty, on the 25th January 1892.

Present:—Right Honourable A. B. Forwood, M.P.; Rear-Admiral F. G. D. Bedford, C.B.; Sir Gerald FitzGerald, K.C.M.G.; A. Godley, Esq., C.B.; H. Waterfield, Esq., C.B.; Major-General O. R. Newmarch, C.S.I.; Williams Cuming, Esq., acting as Secretary.

The minutes of the last meeting were read and confirmed.

The following telegram from the Viceroy of India was then read:—

"Yours 11th, Marine:—We adhere to the proposal contained in our Marine Despatch No. 6 of the 13th May last. We prefer vessels of the 'Pigeon' type, even with comparatively small steaming power, in consideration of their economy and light draft. As a gunboat is usually stationed at Aden, we should not ordinarily be required to send another of the subsidised ships there during the monsoon season. The 'Turquoise' was quoted merely as an example of an inferior type of vessel as compared with modern ships."

The representatives of the Admiralty submitted that the telegraphic reply from India was evidence that the proposed limitation of India's contribution to certain vessels, and those of the smallest class, would not be equitable.

Indian services, even in their most restricted sense, could not evidently be always carried out, unless the Commander-in-Chief had at his disposition a squadron composed of vessels some of which could under every emergency perform any duty, whether ordinary or extraordinary, as required. Although the latter might seldom be demanded, yet the Admiralty were bound, in view of their responsibility for the naval defence of India, to be at the expense of constantly maintaining vessels on the station ready and efficient for all services.

As the contribution of India is, according to the minutes of the conference, to be measured by the full cost of particular ships, the Admiralty consider that, out of the nine vessels on that station, the full cost of the "Marathon," "Brisk," and one gunboat ("Pigeon" class), with the "Sphinx," as originally proposed, fairly represent the charge that ought to be paid by India.

The nine vessels in the squadron aggregate a total tonnage of 16,490, and the "Marathon," "Brisk," "Sphinx," with the "Pigeon" or "Redbreast," of 6,605 or 6,655 tons.

Admiral Bedford is of opinion, from a naval point of view, that, under the agreement for the maintenance of the Indian defence flotilla, the "Assaye" and "Plassy" cannot, except in time of war, be moved about at the discretion of the Commander-in-Chief, and, further, being torpedo gunboats, with locomotive boilers, they cannot operate at any distance from their base, and cannot be regarded as vessels available for general Indian purposes as gunboats.

The Indian representatives replied as follows:—

By the terms of the Conference memorandum, which are admitted to be the sole basis for assessing the contribution of India, that contribution is to be limited to the cost of certain vessels, and those vessels are to be such as are required for and suitable to Indian purposes. They maintain that it is impossible to point to any words in that memorandum which justify any other view. And they strongly protest against the suggestion that the contribution of India is to be in any way measured by the proportion which the strength of the local squadron may bear to that of the entire squadron which the Admiralty find it requisite to maintain on the East India Station, inasmuch as the memorandum of the conference contains no allusion to any such method of assessment.

They consider that Indian purposes do not include the extraordinary requirements referred to by the Admiralty representatives; and they do not think that India should in ordinary times employ a squadron large enough or powerful enough for other than ordinary duties.

The nature of the contribution is clearly expressed in the memorandum. It is to be the whole cost of the vessels "required in the Persian Gulf and off the coasts of India for Indian purposes." The Government of India, with regard to number and class, have reported that the vessels which they require for such purposes are the "Sphinx" and two gunboats of the "Pigeon" class, the larger vessels named by the Admiralty being unsuitable by reason of their expensiveness and great draught; and, the point having at the request of the

Admiralty representatives been again referred to them, they have telegraphed their adherence to that opinion. The representatives of the India Office accordingly hold that those three vessels are what are required for Indian purposes, and that it is their cost only which India should pay.

With reference to the opinion of Admiral Bedford respecting the power of moving the vessels of the defence flotilla, they would point out that, while special provision has been made for the control of the Naval Commander-in-Chief in time of war, there is nothing to interfere with their being used in whatever manner may be thought most suitable during peace; and that it has, in fact, been recognised by the Admiralty that they will frequently be acting at a very considerable distance from the ports for the protection of which they are specially allotted.

The Committee beg to report that they find it impossible to come to an agreement as to the scope of the words "Indian purposes" as conveyed in the minutes of the Conference, and consider that it is desirable that this point should be referred to an independent authority, as well as that of the number and class of vessels required for such purposes.

SUB-APPENDIX No. 9.

LETTER from the GOVERNMENT OF INDIA, dated the 31st July 1894.

We have the honour to invite attention to our Marine Despatch, No. 6, of the 13th May 1891, in which we replied to Lord Cross's Despatch, No. 16, of 5th February 1891, and paragraph 6 of his Despatch, No. 31, of 19th February 1891, on the subject of the number and cost of the vessels belonging to the East India Squadron which are maintained for service in Indian waters, and for which India pays a contribution. In Sir John Gorst's letter, dated India Office, 3rd February 1891 (M 473), Lord Cross informed the Lords of the Admiralty, with reference to the arrangement under which India was in future to pay the whole cost, effective and non-effective, of the subsidised vessels, that he saw no sufficient reason for charging India more than if the arrangement were analogous to that with Australia. We fully concurred with the views expressed by Lord Cross, and agreed to accept a contribution, based on the conditions of the Australasian agreement, of 49,675*l.* per annum for the services of three vessels, viz., the "Sphinx," and two gun-boats of the "Pigeon" class.

3. We have received no reply to this despatch; but observe that the contributions on account of the subsidised vessels amounted in 1891–92 and 1892–93 to 50,158*l.* and 52,083*l.*, respectively. We should be glad to know how these amounts were arrived at, and desire to state that, while willing to pay a fair contribution for efficient ships, we must, in the present state of our finances, use every effort to curtail expenditure. We should also be glad to be favoured with a full reply to the despatch.

4. In connexion with this subject, we would observe that the "Sphinx" will soon require extensive repairs and renewals, such as new decks and boilers; and the question will then arise whether, according to the arrangement made by the Joint India Office and Admiralty Committee of 1887, these should be paid for by India as repairs, or charged to the Admiralty as renewals. In our opinion charges of this nature should be borne by the Admiralty, and we think it would be convenient if a clear understanding on this point could be arrived at before the renewals or repairs have actually to be undertaken.

SUB-APPENDIX No. 10.

DESPATCH to the GOVERNMENT OF INDIA, dated 20th September 1894, No. 110.

I have to acknowledge the receipt of your Excellency's Despatch, No. 9 (Marine), of 31st July 1894, making certain inquiries as to the contribution for the vessels of the East India Squadron which are maintained for service in Indian waters.

2. In reply, I forward herewith, for the information of your Government, copies of the correspondence noted in the margin,* which show the state of the case up to the date when it was agreed between the Admiralty and the India Office to refer to some independent authority the two following points, viz.: What were the "Indian purposes" mentioned in the minutes of the Conference held at the Foreign Office on the 26th of March 1890, and what were "the number "and class of ships required in the Persian Gulf and "off the coasts of India" for such purposes.

3. The Treasury, however, subsequently expressed a desire to extend the scope of the reference beyond the two points which the Secretary of State in Council had agreed to refer to arbitration. To this Lord Kimberley was unable to consent, and no further progress towards settlement has as yet been made. Meanwhile, this Office continues to pay annually to the Admiralty the sum of 50,000*l.*, as agreed to by the Inter-departmental Committee, without prejudice to either Department. The exact figures for 1891–92, 1892–93, and 1893–94, are as follows:—

1891–92.

	£	s.	d.
Evaporator and spare tubes for "Sphinx"	158	0	0
Advance on account of subsidy	50,000	0	0
	£50,158	0	0

1892–93.

	£	s.	d.
Advance on account of subsidy	50,000	0	0
Adjustments on account of quarters to 30th June, 30th September, and 31st March 1891	2,019	0	6
Interpreter's allowances to Lieutenant Shubrick, "Garnet"	42	11	9
Ditto to Lieutenant Taylor, "Marathon"	21	1	4
	£52,082	13	7

1893–94.

	£	s.	d.
Allowance on account of subsidy	50,000	0	0
Interpreter's allowances to Lieutenant Taylor, "Marathon"	51	1	10
Ditto to Assistant Engineer Wheeler, "Brisk"	73	14	0
Ditto to Lieutenant Guest, "Blanche"	20	18	9
	£50,145	14	7

4. As regards the repairs and renewals of the "Sphinx" referred to in the last paragraph of your despatch, I do not consider it desirable to initiate any discussion with the Admiralty as to the incidence of their cost.

SUB-APPENDIX No. 11.

DESPATCH to the GOVERNMENT OF INDIA, dated 26th June 1895.

In continuation of my Despatch, No. 110, of the 20th September 1894, I have now to inform your Government of the further steps which have been taken to settle the contribution to be paid by India for the Naval Squadron in Indian waters.

2. As the Treasury, the Admiralty, and this Department, were unable to agree on the terms of the reference to arbitration, and no progress was being made in carrying out the agreement made at the Foreign Office Conference of 26th March 1890, I decided in Council, in communication with the Admiralty, to refer the questions at issue to the arbitration of Lord Rosebery.

---

* To Admiralty, M 4867, 25 June 1891.
From „ 2 E 951/3041, 17 November 1891.
To „ M 10481, 11 December 1891.
From „ E 2220/91, 14 December 1891.
To „ 11432, 19 December 1891.
From Treasury, 1991/92, 10 February 1892.
To „ M 1522, 23 February 1892.
Memorandum of proceedings of Inter-Departmental Committee, dated 11th and 25th January 1892.

The terms of reference were those which had always been insisted on by this Department, viz., what is the precise meaning to be attached to the words "for Indian purposes" in the report of the above Conference; when this question had been decided, the two Departments, Admiralty and India Office, were to settle the number and class of ships required for such purposes, and the consequent payment to be made; in the event of their failing to agree, this question also to be referred to Lord Rosebery.

3. It will be seen from the correspondence,* copy of which is forwarded herewith, that Lord Rosebery did not concur in the interpretation of the term "Indian purposes" adopted by this Department, as being restricted to the maritime police of the coast, and the repression of piracy and of the local slave trade; and that he decided that it must be held to include some portion, at any rate, of the duties devolving on the Royal Navy for the defence of India and the protection of trade in Indian waters.

4. Accepting this award, I expressed to the Admiralty my willingness to pay from the 1st April 1895 the whole cost, effective and non-effective, as agreed to at the Foreign Office Conference, of the following ships:—

	£
"Brisk" (1,770 tons) - -	36,299
"Pigeon" (775 tons) - -	16,513
Gunboat, same class (755 tons) -	16,513
"Sphinx" (1,130 tons) - -	20,855
Total - -	£90,180

On the other hand, the Admiralty claimed, from the 1st April 1891, the full cost of the four ships which they had detailed as required for Indian purposes, in the interpretation of that term as now settled by the award of the arbitrator:—

	£
"Marathon" (2,950 tons) - -	47,427
"Brisk" (1,770 tons) - -	36,299
"Pigeon" (755 tons) - -	16,513
"Sphinx" (1,130 tons) - -	20,855
Total - -	£121,094

or, deducting 4,000*l.* paid in India for repairs of the "Sphinx," in round numbers 117,000*l.* a year. The Admiralty claim for arrears at this rate for the four years 1891–92 to 1894–95, less the annual payment already made by India of 50,000*l.*, amounted to 268,000*l.*

5. The Lords of the Admiralty finally proposed, however, for the reasons given in their Secretary's letter of the 30th May 1895, the following arrangement:—

The subsidy to commence from the 1st April 1891, and be limited to an annual payment of 100,000*l.*, excluding repairs of "Sphinx," the arrangement remaining in force for ten years from that date.

The Admiralty to waive all claim for arrears beyond a payment during the present financial year of 17,000*l.*, in addition to the subsidy of 100,000*l.*

The repairs of the "Sphinx" to the 31st March next to be defrayed by the Indian Government.

6. As regards the claim for arrears, that was a point which I had not agreed to refer to Lord Rosebery's decision, as I considered it to be clearly settled by the Foreign Office agreement. But as to the annual payment, I was of opinion that, while a reference to arbitration would probably not result in better terms than those offered by the Admiralty, it might possibly increase the Indian payment beyond what the Admiralty were willing to accept. I decided, therefore, in Council, to accept the proposed compromise, which is, I am satisfied, the best arrangement which could be secured in the interests of India. As, however, since this correspondence began, a Royal Commission has been appointed to inquire into Indian expenditure and the apportionment of charge between the Governments of the United Kingdom and of India for purposes in which both are interested, I have informed the Admiralty that this arrangement cannot with propriety be considered as finally closed until any recommendation which the Commission may desire to make on the subject has been duly considered.

Appendix No. 12.

Memorandum by the Director of the Royal Indian Marine on the Increased Subsidy to be paid by India, dated February 1896.

The Indian Navy ceased to exist on April 30th, 1863, it having been arranged by the India Office and the Admiralty, in October and November 1862, "That the "naval defence of India, the protection of trade "generally, as well as the naval services required in "the Red Sea, upon the Eastern Coast of Africa, and "in the Persian Gulf (duties which had previous to "that time been performed partly by Her Majesty's "Navy and partly by the Indian Navy), should be "undertaken altogether by vessels of the Royal Navy," and no question of subsidy was raised.

In September 1864, on receiving a despatch from the Secretary of State, No. 26, dated 30th June 1864, the vessels belonging to the India Government at Aden and in the Persian Gulf were finally ordered to be withdrawn, but, in spite of this, vessels continued to work for India until 1868* (a man-of-war occasionally visiting the Persian Gulf), when the Government of Bombay addressed the Government of India with a view to making improved arrangements with regard to the Indian Marine Force in the Persian Gulf, and forwarded a letter from the Commodore commanding the Royal Navy Squadron on the station, suggesting the co-operation of vessels belonging to the Bombay Marine for the suppression of slavery on the Arabian Coast. The Government of India then communicated with the Secretary of State, who, in his No. 235 of August 31st, 1869, communicated his decision that six ships from the Royal Navy were to be subsidized at a cost of 70,000*l. plus* coal of the three Persian Gulf ships; the Admiralty at the same time stating their opinion that these last vessels should be of 465 tons each.

To this despatch the Government of India, having carefully considered their existing ships, and the expenses attached to them, and after consulting the Commodore commanding the Royal Navy Squadron, sent an answer (No. 3, dated 22nd February 1870), objecting most strongly, on the grounds "that the "scheme detailed in your Grace's despatch of "August 31st, 1869, is altogether dissimilar to the "proposal made in our despatch of 10th June 1869, "No. 20, is not suitable, and it would, under the "proposals of the Board of the Admiralty involve a "charge on the Indian revenues for which sufficient "value would not be returned."

The Commodore, R.N., also gave reasons why a Royal Naval Force would not be so useful as vessels belonging to the Indian Government; in fact, the Government of India and the Naval Commodore commanding agreed that the force of six ships was not required. To this the Secretary of State replied (on September 14th, 1870, No. 224), overriding all the objections of the Government of India, and sanctioning the subsidy of 70,000*l.*

So far from the increased subsidy providing for the Navy doing the work they promised, I find the "Sir Hugh Rose" still armed and employed in the Persian Gulf for offensive purposes in 1871 and 1874, the Admiral approving her employment; the "Quangtung" at Port Blair for the defence of the convict settlement, and the "Amberwitch" at Aden.

The Government having in 1887 added the "Lawrence," a new despatch vessel, for permanent service in the Persian Gulf, and having, in compliance with the Act passed by the House of Commons, 1884, which among the duties of the Royal Indian Marine enumerated "the suppression of piracy," for which service ships are kept in the Persian Gulf, placed a formidable armament in her, considered that the six ships subsidized from the Royal Navy could be reduced to four, and the subsidy, based on the same calculation as that of 1869, to 41,600*l.* + 3,100*l.*, being 5 per cent. on cost of the "Sphinx" + her repairs calculated at 4,000*l.* a year = 48,700*l.*

* Hugh Rose" was armed and in the Gulf in 1871-74

Things went on thus until the Foreign Office Conference sat in May 1891, when the principle that India should pay the full cost of ships specially allotted for service in Indian waters was agreed to, but the size of the ships which India said suited her purpose was objected to by the Admiralty, who, whereas they in July 1869 considered three vessels of 1,395 tons best suited for the Persian Gulf work, now held that the "Sphinx" and two gunboats of the "Pigeon" class, whose tonnage amounted to 2,640 tons, were much too small, and this too when the "Lawrence" of 902 tons was permanently in addition to this force on the station. The Conference having agreed to the principle that India ought to pay the whole cost of the subsidized squadron, Mr. Forwood, one of the Conference and an Admiralty official, was asked to draw up a memorandum on the size and cost of the ships which the Admiralty thought should be subsidized. This he did on a different principle to the basis on which the two previous subsidies were framed, resulting in a claim in return for the services of four ships aggregating about 5,350 tons, of 103,577*l.* *per annum*. To this the Secretary of State pointed out that India paragraph 4 of February 3rd, 1891) had to be consulted as to the number and class of ships required. In January 1891 (paragraph 3) the Admiralty again increased their demands to 117,000*l.*, but in paragraphs 7 and 8 show that this sum is *not* based on the same data as the Australian agreement, which, if followed, would reduce the amount to 110,917*l.*

On May 9th, 1891, the Government of India telegraphed that three vessels (not four) would be sufficient for their purposes, viz., "Sphinx" and two gunboats of the "Pigeon" class (total tonnage 2,640), the subsidy for which should not be calculated at a higher rate than that of the Australian Colonies, and must not exceed 50,000*l.*; this was followed by a despatch of May 13th, 1891, in which they offer 49,675*l.*; and this brings us up to the time when Lord Rosebery is called in as an arbitrator, and on his decision the Secretary of State has agreed to pay a subsidy of 100,000*l.* a year. This award, I humbly submit, has been given without sufficient stress being laid on several points.

Too much importance appears to have been attached to the words "for Indian purposes" and "local purposes" used in the Foreign Office Conference, and again by Lord Rosebery in his letter of December 6th.* 1894. During the last 12½ years I am unable to trace a single case, with the exception of one ship recently sent to Goa, and she was shortly replaced by the "Plassy," where a man-of-war has performed any "Indian purpose" or "local purpose," all of which have been done by the ships of the Royal Indian Marine.

It may be argued that operations at Bahrein are local, but this can hardly be substantiated when it is considered that communications must go through the Home Government and to Her Majesty's Ambassador at Constantinople, and I submit this is an Imperial question.

Again, Lord Rosebery assumes that, prior to 1862, the Indian Navy undertook, in conjunction with the Royal Navy, certain duties; the truth, as far as I can trace, is that the Indian Navy did nearly the whole of the work, simply because there was no such thing as a Royal Navy Squadron in Indian waters, and therefore the Indian Navy had perforce to do such duties as cropped up outside its own legitimate work; Indian Navy ships were employed in the New Zealand and China Wars, and also in the operations in Borneo; but it would be hard to be asked to pay a subsidy on the ground that India assisted the Home Government when it wanted help outside India's own legitimate sphere.

A comparison is made between the subsidies paid by India and Australia; according to the present Navy List, Australia for 126,000*l.* (which must not be exceeded) has four cruisers and one gunboat in commission, total tonnage 11,035 tons; and one cruiser and one gunboat in reserve of 3,310 tons; and the whole of these ships *are in addition* to the Royal Navy Australian Squadron; thus, even if we leave out the two ships in reserve, Australia pays 11·4*l.* per ton.

Even if India accepts the Admiralty proposal for "Marathon," "Brisk," "Pigeon," and "Sphinx," total tonnage 6,605 tons, and the subsidy now fixed, viz., 100,000*l.*, India will pay at the rate of 15*l.* a ton, and not only this, but not a single ship is added to the existing squadron.

Thus Australia pays 11·4*l.* per ton, and has an addition to the local squadron of 14,345 tons, and India pays 15*l.* per ton without the addition of a single ship.

I submit no grounds have been put forward for such an extraordinary difference in the way of calculating, and the amount of the subsidy, and I think India should demand to be put on the same terms as Australia, as the Government of India asked might be done in paragraph 4 of their despatch of 13th May 1891, which request apparently was not laid before Lord Rosebery.

A point not touched on in any of the papers I have seen is the certainty of the whole of the subsidized ships being withdrawn from their stations in time of a great naval war. The example of Australia is eulogized "in contributing liberally for the protection of their "floating trade." If the same terms, viz., that subsidized ships should be in excess of the ordinary squadron and the same subsidy, viz., 11·4*l.* per ton be adopted, for the 100,000*l.* India is now asked to pay, the Admiralty ought to add 8,772 tons of shipping to the Indian squadron which protects, not only Indian trade, but that of Australia and China.

India has also provided the following vessels, the "Magdala," "Abyssinia," "Plassy," "Assaye," and seven first-class torpedo boats, at a cost to India of 474,497*l.*, and has recently expended 67,000*l.* in re-arming the two first ships, all of which are at present handed over to the Admiralty, and are shown in the Navy List. A subsidy of 60,000*l.* is also paid *per annum* to the Admiralty for their crews.

If this 60,000*l.* is added to the 100,000*l.* now sanctioned by the Secretary of State, India will pay 34,000*l.* *more* than Australia for almost exactly the same amount of tonnage,* but with this difference, that India has paid for and provided 7,710 tons of shipping and seven torpedo boats, and no increase to the Indian Royal Navy Squadron has been made.

The Chancellor of the Exchequer, according to Mr. (now Sir H.) Waterfield's note of March 28th, 1890, held "that the basis of the Australian agreement "ought to be applied to India." This the Government of India also asked for, and we should press that that basis is insisted on.

No attention has been drawn in any of the notes laid before Lord Rosebery on the Indian side of the controversy, of the services rendered by India to the Royal Navy Squadron, and the large expenditure willingly incurred by India to make the dockyards thoroughly efficient. It is not saying too much to assert that without the Indian dockyards the East India Squadron could not exist in a state of efficiency; the so-called dockyard at Trincomalee has no dock, and the workshops are only equal to minor repairs, not only from the small amount of plant and machinery, but because skilled labour is not procurable. At Bombay large works have been undertaken by the Government of India almost entirely to meet the requirements of the Navy, as the dockyard prior to these was sufficient for Indian requirements. When, in 1888, the Admiralty pressed the Government of India to construct a huge dock at Bombay, which, subsequent experience has shown, would have been almost an impossibility owing to the enormous difficulty in blasting a channel to it, the Government of India decided on deepening the Duncan Dock to meet, as far as possible, naval requirements. This was completed in 1893, at a cost to India of Rs. 4,85,335, and a ship and torpedo basin and dock was also constructed, costing Rs. 15,21,609, and a new dredger costing 23,100*l.*, provided to make and maintain new channel. Additional storehouses have recently been erected, costing Rs. 1,56,596, to take the large additional stock of stores entailed by the agreement between the Admiralty and India Office to supply stores to the Royal Navy Squadron. A reserve of boats for that squadron is also kept up, and special storehouses are allotted to the Navy. It may be argued that the Admiralty pay India 10 per cent. on the value of those stores, but, when the enormous value of the land in Bombay, the cost of buildings, and the staff required for care and supervision, as also the fact that India has to pay for these stores, and is not repaid by the Admiralty for lengthened periods, is considered, it will be seen that this argument cannot be maintained. A victualling depôt for the Navy is also maintained at

* Enclosure No. 3 of Secretary of State's Despatch No. 66 of 1895.

	Tons.
* Australia	14,345
India for "Marathon," "Brisk," "Pigeon," and "Sphinx," total	6,605
"Magdala," "Abyssinia," "Plassy," and "Assaye"	7,710
Total	14,315

Bombay, for which the Admiralty pay 250*l.* a year, according to the agreement between the Secretary of State and the Admiralty.

The estimated value of land on which the Bombay dockyard stands is Rs. 44,24,900, and the buildings and docks at Rs. 34,56,409. Besides this, the dockyard at Kidderpore must be taken into consideration, the total value of which is estimated at Rs. 12,06,500, and where a new dock capable of docking any ship of the East Indian Naval Squadron has recently been constructed.

The amount for repairs executed to Royal Navy ships for 1894-95 was Rs. 2,27,355, and stores were issued amounting to Rs. 2,12,314. On the repairs of ships 10 per cent. is charged to the Admiralty, but this cannot be considered for a moment to represent an equivalent for supervision, machinery, buildings, value of land, &c.

During 1894-95 the dry docks were occupied by men-of-war (not including torpedo boats) for 235 days *free of all charge;* if they had occupied the Merewether dry dock (*belonging to the Bombay Port Trust*) the charge would have been Rs. 1,85,200.

The above is only introduced as an example, because the Merewether dock could not and would not have docked those vessels, as its primary object is the docking of merchant ships for cleaning purposes, and the trustees, to whom it belongs, will not allow it to be used for lengthened repairs.

Pontoon sheers have been provided capable of going alongside a ship, and lifting from 45 to 50 tons, and in the wet basin a hydraulic crane capable of lifting 30 tons.

A torpedo store and workshop have been provided, the air-compressing and other machinery in which cost Rs. 24,900; for this the Admiralty pay:—

	Rs.
For torpedo store room - - -	932
Five per cent. on machinery -	- 1,200

India provides moorings free of charge at Bombay for the Navy. During last year those were occupied by men-of-war on 78 occasions.

Both dockyards (at Bombay and Calcutta) are, with the exception of Malta, as well qualified to execute repairs to Her Majesty's ships as any naval dockyard abroad.

Another point is that the Government of India have so fortified Bombay as to render the dockyard as safe as possible.

No British possession keeps up a completely equipped marine survey working under the Hydrographer at the Admiralty. India does, at an annual cost of Rs. 2,12,780, with a specially constructed surveying ship whose original cost was Rs. 4,28,000.

The Indian Marine Act provides for the service being, in time of war, placed under the Admiralty, and becoming part of Her Majesty's naval forces. To render the officers thoroughly efficient, they are constantly undergoing instruction in gunnery, torpedo, and other warlike duties, under the captain of the Defence Squadron, and several have also passed the short courses in "Excellent" and "Vernon." Thus, should their services be required, at least 10 commanders, 30 lieutenants, and 30 sub-lieutenants, well up in their duties could be added to the Navy; also 40 engineers; and this without any cost to the Admiralty.

India has also added a powerful armament for the "Warren Hastings," so as to be able to assist the Naval Commander-in-Chief with a valuable auxiliary cruiser.

To sum up briefly:—

In 1863 the Admiralty took over the duties of the Indian Navy without any question of subsidy, and the Indian Navy was abolished on the strength of this agreement.

In 1870, the Indian Navy being abolished, and India having, therefore, no option, a subsidy is asked for, and the Secretary of State, in direct opposition to the wishes of the Government of India, agreed to pay a subsidy of 70,000*l.* to the Admiralty for six ships.

In 1887 the subsidy was reduced to 48,700*l.* for four ships.

In 1891 the Foreign Office Conference decided that India should pay the full cost of ships specially allotted for service in Indian waters, and on this decision the Admiralty arbitrarily demanded a subsidy of 117,000*l.*, and based this on ships of a size considered undesirable by India. This the Secretary of State objected to, and India, when consulted, stated only three ships of a specified class were required, and the subsidy should not exceed 50,000*l.*

The case was in 1895 submitted to Lord Rosebery for arbitration, and on his ruling the Secretary of State has agreed to a subsidy of 100,000*l.*

In submitting the case to Lord Rosebery no stress was laid on the services of India to the Royal Navy.

India has added ships to the Navy at a cost to herself of 541,497*l.*, and has built docks and stores to meet naval requirements costing Rs. 21,88,440.

India provides a thoroughly equipped marine survey.

I also think that no reason has been shown for departing from the Chancellor of the Exchequer's ruling "that the basis of the Australian agreement "ought to be applied to India."

I submit that these points be laid before the Royal Commission.

APPENDIX No. 47.

PAPER put in by Mr. WILLIAMS CUMING on behalf of the ADMIRALTY, 30th June 1896.

CONTRIBUTION towards the EXPENSES of HER MAJESTY'S SHIPS in INDIAN WATERS.

Apparently the case for India has been represented to the Royal Commission from two points of view, viz., that of the Secretary of State for India in Council, as stated in the paper handed in by the Financial Secretary of the India Office, and that of the Government of India, as set forth in the evidence of the Director of Indian Marine.

General Concurrence of Secretary of State with present Arrangement.

The Admiralty notice with satisfaction that the India Office does not desire to dispute the arrangement "made upon any arithmetical or technical grounds," from which it is understood that the Secretary of State for India in Council accepts the terms agreed on at the Foreign Office Conference (under which India is to pay the full cost, effective and non-effective, of the ships selected for Indian purposes), Lord Rosebery's award interpreting the term "Indian purposes," and the estimates and calculations made by the Admiralty.

Admiralty Views on Financial Secretary's Paper.

The Admiralty, on their part, are prepared to accept generally the history of the question as given in the Financial Secretary's paper, subject to the following remarks as regards the non-payment by India of any subsidy between the years 1862 and 1869, and the duties performed by the Indian Navy prior to its abolition.

Absence of Subsidy between the years 1862 *and* 1869.

Stress has been laid on the despatch of Sir Charles Wood to the Government of India in 1862, where it is stated that, as "India cannot be permitted to exercise "any control over the disposition of the Imperial Navy, "so she cannot properly be charged with any portion "of its cost."—(Paper of Financial Secretary, page 18, paragraph 2.)

On this it is desired to observe that, so far as the Admiralty is aware, the question of charge was not then discussed or considered, and that such an arrangement could not have been agreed to by the Admiralty without the consent of the Treasury. Neither would the principle therein laid down be admitted as tenable in respect of any service which, while for the benefit of two parties, must necessarily be carried out on the responsibility of one.

The view that the non-payment of any subsidy between 1862–9 was only a temporary waiver of the claims of the Imperial Government is confirmed by a paragraph in an Admiralty letter of the 23rd January 1869 to the India Office, to which the India Office letter of 25th February 1869, page 14, India Office Correspondence, is a reply, viz.:—

"My Lords would venture to suggest for the consideration of His Grace, the Secretary of State, whether *the time has not arrived* for adjusting the proportions in which the cost of the naval squadron on the East Indian station should be borne by naval votes and by the revenues of India."

Duties of old Indian Navy.

The reply of the India Office, 25th February 1869, was to the effect that, subject to certain arrangements, the payment of 70,000*l.* proposed by the Admiralty would not be objected to.

The duties of the old Indian Navy were defined by Sir C. Wood (India Office letter to the Admiralty of the 10th October 1862,) in the following paragraph:—

"He is of opinion that, as regards India, the general defence, the protection to trade generally, and the measures for putting down the slave trade on the Eastern Coast, which have hitherto been performed partly by Her Majesty's Navy and partly by the Indian Navy, should be undertaken altogether by Her Majesty's Navy."

It has been contended that the clause commencing "which have hitherto been performed" applies only to "the measures for putting down the slave trade on the "Eastern Coast of Africa."

The context of this India Office letter, and the terms of the Admiralty reply of 13th October, and of the India Office rejoinder of the 7th November 1862, do not support this view; and it may be asked what was the object of proposing that the general defence and protection to trade should be undertaken altogether by Her Majesty's Navy, if that was already the case?

It is considered, therefore, by the Admiralty, on the high authority of Sir C. Wood, that some portion of the general defence and the protection of trade was afforded by the old Indian Navy.

Suggested Consideration as to Amount of Subsidy.

In concluding his paper, the Financial Secretary requests the attention of the Commission to the broad question whether, for certain reasons hereunder quoted, it is right to exact from India within 17,000*l.* of the full charge, effective and non-effective, of the squadron, on which the Admiralty would wish to make the following observations:—

Comparison of Control over Army and Navy.

"(1.) *Although the Admiral is required to comply with the wishes of the Government of India when communicated to him, still the ships are not at their disposal in the same degree that the Army is.*"

On this point it is to be observed that the control given to the Government of India is precisely that laid down by the Foreign Office Conference, and stringent orders for its observance have been sent to the Commander-in-Chief on the station. The sum of 117,000*l.* (excluding the repairs of the "Sphinx") has been put forward, and would be held to by the Admiralty, as the estimated annual cost of the selected ships, but it is not the full cost in the sense of the full cost paid by India for the Army, inasmuch as it does not include any incidental charges, such as the cost of reserves, of training officers, or of raising and training men for the Fleet, &c.

Subsidised Vessels stated to be employed on other than Indian Services.

"(2.) *The vessels not employed in the Persian Gulf are under the command of the Admiralty, and must be occasionally employed on other than Indian Services (see Treasury letter of the 30th June 1888), for which India gets no return.*"

It cannot be admitted that the vessels alluded to are employed on any other than "Indian purposes," as defined by Lord Rosebery. Under his definition, Indian purposes are not only served by the selected ships, but also by the non-subsidised ships of the East Indian Squadron, and by the ships of other squadrons towards which no contribution is asked. This is admitted by the Director of Indian Marine in his answers to Questions 9574–5.

Number and Class of Vessels.

"(3.) *The number and class of the vessels employed is not that which the Government of India think necessary, but that which the Admiralty determine.*"

This objection, which virtually raises the question of the meaning of "Indian purposes," can scarcely be reconciled with the acceptance by the Secretary of State of Lord Rosebery's award.

The ships which the Indian Government think necessary are only sufficient to meet the restricted view of "Indian purposes;" those put forward by the Admiralty, are to meet the wider definition laid down in the award. It was open to the India Office, instead of accepting the compromise offered by the Admiralty, to have submitted the number and class of ships for the further arbitration of Lord Rosebery, whose decision the Secretary of State had agreed to accept as final.

The grounds on which the Secretary of State accepted the compromise are clearly set forth in his despatch to the Government of India, of the 26th June 1895, viz:—

"But as to the annual payment I was of opinion that, while a reference to arbitration would probably not result in better terms than those offered by the Admiralty, it might possibly increase the Indian payment beyond what the Admiralty were willing to accept. I decided, therefore, in Council, to accept the proposed compromise, which is, I am satisfied, the best arrangement which could be secured in the interests of India."

The East Indian Squadron consists of eight vessels, viz.:—

—	Tonnage.	Complement.
"Bonaventure" - -	4,360	361†
* "Marathon" - - -	2,950	218
"Cossack" - -	1,770	172
* "Brisk" - - -	1,770	172
* "Pigeon" - -	755	76
"Redbreast" - - -	805	76
"Lapwing" - -	805	76
* "Sphinx" - - -	1,130	88
	14,345	1,239

The ships marked *, having an aggregate tonnage of 6,605 tons, and complements amounting to 554, were selected by the Admiralty as representing Indian purposes, and are a moderate proportion of the East Indian Squadron.

Estimate of Full Cost of Ships selected.

Excluding the repairs of the "Sphinx," the estimated annual cost of these ships is 117,000*l.*, and, by the arrangement made, the Admiralty is receiving 17,000*l.* a year less than their full cost, besides foregoing arrears amounting at the least to 183,000*l.*, which, as shown in the letter to the India Office of 30th May 1895) No. 62, page 54, of Printed Correspondence), they were entitled to.

Grounds on which Admiralty has accepted a Reduced Subsidy.

The Admiralty offered to forego 17,000*l.* a year of the full cost of the ships in order to settle a long controversy, and because (see their letter of the 30th May, 1895,) they were willing to recognize that, as urged in paragraph 7 of the India Office letter of the 28th March 1895, there might be, under existing circumstances, a limit to what India should be asked to pay.

† Excluding Flag and Retinue.

Subsidy as now arranged very moderate.

On their part, the Admiralty would ask the consideration of the Commission whether, leaving arrangements and technical reasons out of the question, 100,000*l.* a year can be looked on as an unreasonable amount for an Empire, with the revenue of India and its political exigencies, to pay for general protection, protection of trade, and for police duties undertaken by the East Indian Squadron, apart from the general protection afforded by other squadrons of Her Majesty's Navy.

Average Amount spread over the Period of the Agreement.

As a matter of fact, the average amount which will have been paid by India during the period of the present arrangement is much less, viz.:—

1891–2 to 1894–5,	4 years at 50,000*l.*	£200,000
1895–6		* 117,000
1896–7 to 1900–1,	5 years at 100,000*l.*	500,000
		£ 817,000

an average of 81,700*l.* a year, the annual payment offered by the India Office after Lord Rosebery's award being 90,180*l.*—(India Office letter, 23rd May 1895, No. 62, page 53 of Printed Correspondence.)

Case as put forward by Director of Indian Marine on behalf of the Indian Government.

The case for the Indian Government, as represented in the evidence of the Director of Indian Marine, covers a much wider ground than the paper on which the foregoing remarks have been made. Apparently, the payment of any subsidy at all, the agreement of the Foreign Office Conference, the Rosebery award, and the selection of ships, as well as the amount of the subsidy, are all objected to, and it would seem to be desired that the Police duties should be performed by an armed Indian Marine, leaving the general defence and the protection of trade to the Navy without payment.

Most of these points have been dealt with in this and other papers already submitted to the Commission, but there are certain matters on which it appears advisable to comment and to state the views of the Admiralty.

Scope of Indian Marine Act, 1884.

On the question of the arming of the Indian Marine, it is desired to express entire concurrence in the evidence given by Admiral Kennedy. It cannot be admitted that such a question is open, or that a return to the system which existed in the days of the late East India Company is possible.

Arming of Indian Marine.

But it may be well to correct any misapprehension as regards the scope of the Indian Marine Act of 1884, which appears to have been understood as having been framed for the purpose of reconstituting an Indian Armed Naval Force. On the contrary, it was obtained because the vessels in the employ of India were not under the Mercantile Shipping Act, or, indeed, under any law at all.

This was clearly the view of the India Office. When the draft of the Act was under consideration, the Admiralty, in letter of 2nd July 1879, drew attention to the anomaly of placing a non-combatant service under Martial Law. The India Office, in reply of 13th February 1883, remarked that the "want of some law "has caused great inconvenience, for these vessels are "not subject to the Mercantile Shipping Act, and in "fact come under no law whatever. The proposed "Bill meets the want, and provides for the observance "of discipline in Her Majesty's Indian Marine, and "proposes to give the Governor-General of India in "Council power to make laws for punishing all "persons employed or serving in or belonging to "Her Majesty's Indian Marine Service."

Indian Marine a Non-combatant Service.

"Thus from the terms of the Bill and from its being "applicable to a non-combatant service, it cannot be "said, when it becomes an Act, that it will place the "service under Martial Law."

"Clause 6 of the Act no doubt provides for bringing "vessels of the Marine under the Naval Discipline "Act, but that is only in time of war, when they "would be under the control of the Naval "Commander-in-Chief, and would, no doubt, be fully "armed."

Australasian Agreement.

It may be here mentioned that the Australasian vessels, alluded to in Q. 9,396, are for local defence only, and that the Admiralty has always required that vessels, not purely for the local defence of the interior waters of a Bay or Port, must be subject to the supreme authority of the Admiral on the station.

The relative liabilities of India and the Australasian Colonies is a wide question which the Admiralty is not, as a Department, prepared to discuss. It has only to be remarked that the Agreement made in each case differs, and that the claim to calculate the Indian Subsidy on the Australasian basis has been withdrawn by the Secretary of State. It has always been understood that the Foreign Office Conference, which settled that India should pay the entire cost of the vessels, had been accepted by Indian Government.

Comparison of Estimated and Actual Cost of Repairs.

Exception is taken to the average cost of repairs as estimated by the Admiralty, and the Director of Indian Marine draws attention (Q. 9308) to the estimated annual cost of repairing the "Marathon," "Brisk," and "Pigeon," viz., 15,210*l.*, as compared with the actual average for five years, which he states is 2,030*l.*

The explanation is that the amount estimated by the Admiralty represents the average of the total cost of repairs spread over the whole life of the ship, and that it is quite possible for the repairs in any subsequent year to equal or exceed the total of the five years on which the Director of Indian Marine has based his Estimate.

In illustration of this, it is an interesting fact that on the 18th July 1895 the Director of Indian Marine submitted an estimate of repairs required to make good defects in the "Sphinx," which vessel, it is noticed, he has omitted from his calculation.

The estimate for these defects was 3,639*l.* and was put forward with the remark that, as "the vessel was "not in Bombay when it was prepared, and as other "defects were sure to crop up as the work of opening "up proceeded, it can only be understood to be of an "approximate nature and probably under what it "would have been had the ship been here (Bombay) "for an accurate survey."

Thus one repair of this vessel may be taken as costing probably double what is given as the annual average of the three ships above mentioned.

* Including 17,090*l.* arrears.

APPENDIX No. 48.

PAYMENTS in respect of SERVICES in which both the IMPERIAL and the INDIAN GOVERNMENTS are interested.

Handed in by the Financial Secretary, India Office.

PAYMENTS on account of HER MAJESTY'S FORCES serving in India.

EFFECTIVE CHARGES.

Under regulations framed in 1824, the cost of recruiting for British regiments serving in India was divided between the British Government and the East India Company, according to the amount of pay issued for soldiers on the British and Indian establishments respectively. For the purpose of receiving and training the recruits, small depôts were kept at Maidstone (for cavalry) and Chatham (for infantry). These depôts were placed on the "Indian establishment," and their cost, together with that of certain recruiting and departmental expenses, was borne by India.

2. The effective strength of the British regiments in India from 1834 to 1857 averaged 24,133. The payments made for the depôts and recruiting districts, and for expenditure by regimental agents, from 1834 to 1857, averaged 195,171*l.*, or about 8*l.* per man serving in India.

3. The East India Company's European forces from 1818 to 1857 averaged in number 11,758; the number of recruits sent from their depôt at Warley between 1850 and 1859 amounted to 24,783, at an average cost per recruit of 19*l.* 14*s.* 10¼*d.* per man, or, omitting the exceptional years of the Mutiny, 26*l.* 7*s.* 5*d.*, giving 2*l.* 8*s.* 11*d.* and 3*l.* 3*s.* 9¾*d.* respectively per man on the establishment in India.

4. At the time of the Mutiny upwards of 40 battalions were sent to India, leaving depôts behind them, which were placed on the "Indian establishment"; and thus the force, which at the recruiting depôts had rarely exceeded half a regiment of cavalry, and 1,100 or 1,200 infantry, rose to nearly 19,000 men paid for by India, "though available in this country";* and, even after the emergency had passed away, the depôt establishments of Indian regiments numbered very nearly 10,000 men, while the recruiting and departmental expenses were also largely increased.

5. The Government of India was transferred to the Crown in 1858, and the local European forces were abolished in 1860. It is from the latter date that differences have arisen between the Indian and Imperial Governments, which have not yet been settled.

6. In 1860 a Committee, over which Sir Alexander Tulloch presided, was appointed to determine an average rate for the effective charges in England; and a capitation rate of 10*l.* on the effective strength in India was adopted temporarily, under protest by the Secretary of State for India in Council (Sir Charles Wood being the Secretary of State) against its being an equitable permanent rate, if allowance were made for the benefit which Imperial interests derived from the employment in India of so large a portion of the British Army, and the consequent maintenance of the depôts in England.† This capitation rate of 10*l.* remained in force from 1861–62 to 1869–70. It was admitted by Viscount Cardwell, who had been Secretary of State for War from 1868 to 1874, that the system was unnecessarily expensive; and he stated that the Accountant-General of the War Office calculated the extra cost to India during this arrangement, as compared even with that which succeeded it, at no less than 100,000*l.* per annum.‡

7. From 1869 to 1872 two Committees (under Mr. Seccombe and General Jameson) endeavoured to ascertain the actual cost of a recruit of each arm of the Service, and they named certain rates as the amount incurred by the War Office; but the India Office members considered those rates excessive and the system needlessly expensive. The payments from 1870–71 to 1872–73 were, notwithstanding, adjusted on these rates. The first and second reports of Mr. Seccombe's Committee were sent in January 1870 to the Government of India, who in January 1873 wrote a representation against the cost of the system of recruiting pursued by the War Office. This despatch, and a correspondence between the War and India Offices, in which the Duke of Argyll strongly protested against the charges made by the War Office, were in 1874 laid before the Select Committee of the House of Commons on East India Finance, who made a report on the 28th of July. The Committee stated the question which they had to consider as follows:—

"Granting that India ought to pay for that portion of the British Army which is stationed in India, together with the necessary stores and transport, and the expense of recruiting and depôts in this country, * * * *; whether she is called upon to pay more than her due share of such charges, and whether the charges themselves are fixed with a due regard to economy.

* * * *

"This will also be found to divide itself into two questions. First, whether the India Office is able to obtain from the other departments of the State due consideration for Indian interests. Secondly, whether the views of the Government of India in India are sufficiently consulted by the India Office itself.

"Your Committee have made a careful inquiry into these points. They have had the benefit of the evidence taken before the Committee on Indian Finance which sat during the last three sessions of the late Parliament. They have also had before them, among other documents to be found in the Appendix to their Report, the proceedings of a Committee appointed by the Secretaries of State for War and for India, 'to make arrangements 'for adjusting from the 1st April 1869, the charges for 'effective services of Her Majesty's regiments on the 'East India Establishment, on the principle of actual 'charges,' together with an unfinished correspondence between the two departments in which the several matters in dispute between them are clearly and strongly set forth.

"They have, moreover, had the advantage of examining, in addition to some of the principal permanent officials of both departments, His Royal Highness the Field Marshal Commanding-in-Chief; the late Secretary of State for War, Viscount Cardwell; the present Secretary of State for India, the Marquis of Salisbury; and other high authorities.

"From these witnesses very valuable evidence has been received in reference to the general principles on which these charges are and ought to be made, as well as upon the various items of which the sums total are made up.

"Your Committee have received an impression from these sources that charges have in some instances been imposed upon India which ought to have been borne by England. Your Committee have, however, been assured by various witnesses that a very general desire prevails among the different English departments not to throw any charge upon India improperly. Your Committee cannot too strongly insist on the importance of securing for India strict impartiality in all her financial arrangements with this country, and they agree in the opinion which was very emphatically expressed by the Marquis of Salisbury, that the most effectual way of securing financial justice for India is for the House of Commons to be constantly watchful on her behalf.

"Your Committee cannot lay down too strongly the position that the English estimates ought not to be relieved at the expense of the Indian revenues, but that the Secretary of State for India in Council has the constitutional right of refusing to pay for objects in which he considers that India has no interest. At the same time India, as a component part of the Empire, must be prepared to share in the cost of a system the expense of which may be enhanced for Imperial purposes.

"Your Committee have found that there has been and is considerable difference of opinion between the two great departments which conduct the military and Indian affairs of the Empire, both generally as to the proportion of the charges which ought to be borne by India, and in particular with respect to the items which should be taken into account.

"It has been attempted to settle these differences by means of a Committee composed of permanent officers of these two departments; but, although the labours of this Committee have resulted in presenting

* Report of Sir A. Tulloch's Committee, page 10 of House of Lords' Paper 165 of 1862.

† Letter to War Office, 8th March 1861, House of Lords' Paper 165 of 1862, page 72.

‡ Evidence taken before the Select Committee on East India Finance, 1874, Questions 1247 and 1337–38.

the points of difference in a clear light, yet no agreement has been finally arrived at. Your Committee have been informed that, with a view to settle these differences, an independent authority is to be added to the departmental committee, for the purpose of bringing the questions thus stated to some satisfactory solution. Your Committee have been informed, in the course of their inquiry, that steps have been taken to supply this obvious want, and that the Government have secured the co-operation of Mr. Bouverie, a former member of your House, as president of this committee. Your Committee hope that the deliberations of this committee will assist the heads of the English departments and the Secretary of State for India to come to conclusions upon the charges in dispute, satisfactory both to England and to India.

"Your Committee suggest that in the interval before next session the departmental committee should, under the supervision of the president, continue the inquiries into all the details of charges which are now incurred by the War Office on behalf of Indian interests, and for which charges Indian interests are considered liable. Your Committee would indicate some of the heads which would appear to need special investigation, such as the strength of depôts, and the ranks composing these depôts, and whether recruits are sent to India with much less training than the agreed-on period. Your Committee would also urge a further investigation into all the items of charge making up the total cost of recruits, especially with regard to the large addition of one-third to the cost for deaths, desertions, &c. Your Committee would also advise an inquiry into the mode of adjusting claims of the War Office against Indian revenues arising subsequently to the 31st of March 1872, there being no arrangement as yet fixed on as to the final adjustment of charges for effective services. Your Committee would also advise an inquiry into the arrangements for adjusting the non-effective charges, and whether the retiring pay, pensions, and other charges of this nature should be adjusted by the contribution of a lump sum, or whether the actual charges for pensions based on the actual service rendered to the Imperial and Indian Governments should be followed for settling these claims.

"It would be impossible for your Committee to pronounce an opinion of any value upon these details, especially at a time when so much of our military policy is new and scarcely tried, and must for some years to come be more or less tentative. They would, however, suggest that the payments from India should be as much as possible in the form of fixed rates for particular charges, for the obvious purpose of avoiding frequent re-opening of accounts, and the delays in settling claims which have led to the serious evil of the accounts having been presented to Parliament without certificate from the auditor that the payments have been allowed, as well as the inconvenience which might arise from any change of policy in either administration. They think that such sums should be, in the first instance, arrived at by careful computation; but, when once fixed, they should continue without alteration for as many years as may be deemed advisable.

* * * *

"Your Committee would remark that, while there appears to be every disposition among the heads of other Departments to consult the India Office upon proposed changes which may affect India, yet this has sometimes been omitted, in consequence of the fact that India may be affected by such changes having been overlooked; and the India Office, as the controlling authority, has occasionally acted independently of, or not in accord with, the opinions of the Government of India in India. In reference to these points your Committee suggests that, although the interests of India must be subordinate, like those of any other portion of the Empire, to the common interests of the Empire as a whole, and that although the best information upon almost every subject connected with India may be generally obtained in this country, yet that even the appearance of neglect may be misunderstood and magnified by the natives of India, some of whom take the most intense interest in the minutest details of the policy adopted by this country towards its Indian possessions, and attach perhaps exaggerated importance to points which may pass unobserved by these who have to perform the arduous task of governing a vast and varied Empire.

8. After the Report of the Select Committee, Mr. Bouverie undertook to preside over the departmental Committee on the rates, which reported in 1875, naming certain amounts at which each soldier was to be rated, according to his branch of the service. The amount payable on an average strength (from 1870–71 to 1875–76) of 61,309, was raised by Mr. Bouverie's Committee to 5*l.* 16*s.* 7*d.* for recruits only (as compared with 4*l.* 12*s.* 6*d.* in Mr. Seccombe's Committee's Report) per man of all arms.

9. The Government of India (under Lord Northbrook) in a Despatch dated the 10th of March 1876 (which, together with a Minute by Lord Northbrook of the 15th of September 1874, was laid before the House of Lords in 1893, Paper 211), contested the fairness of the conclusions of Mr. Bouverie's Committee; but the Secretary of State agreed to adjust the claims from 1873–74 to 1876–77 in accordance therewith. The accounts in dispute, however, from 1870–71 onwards were not closed, as the India Office refused to accept soldiers of several years' standing at the rates named for recruits.

10. The Committee on Public Accounts having in 1877 commented very strongly on the delay in settling the accounts between the Indian Government and the War Office, the Secretary of State for India (Lord Cranbrook) in August 1877 proposed a Committee of five members of the Privy Council to settle the unadjusted accounts between the two Governments. Subsequently, Colonel Stanley (the present Earl of Derby), who was then Financial Secretary of the Treasury, reported on the question; and, in his Memorandum of December 1877, he made the following important observation:—"I do not see how we can "forego the charges as a matter of account; but, "with some reserve, I must record my opinion that "the system of actual charge exacts too much." Negotiations proceeded, and the India Office proposed a rate of 6*l.* a man, and Mr. (now Lord) Welby, and Sir Henry Selwin-Ibbetson, 6*l.* 10*s.*, which was formally agreed to by the India Office, and by a meeting at which the Treasury and War Office were represented in June 1878; but this arrangement for the future afterwards fell through, and the rate was referred to a Commission, of which Lord Northbrook was appointed to be the Chairman.

11. The Chancellor of the Exchequer (Sir Stafford Northcote) admitted the objections raised by the India Office to the unadjusted War Office claims; and the justice of this concession was borne out by the proceedings of Lord Northbrook's Commission. The Commission, however, did not touch the equitable claim for a reduction in the charges, which had been persistently brought forward by the Government of India and the India Office from the beginning of the discussions, or examine into the allegation that India had been greatly overcharged between the years 1858 and 1879.

12. Owing to the inquiries which were being conducted by a Royal Commission into the organization of the British Army, and by a Commission in India into the practicability of reducing the military charges, Lord Northbrook's Commission was unable for many years to recommend a permanent capitation rate; but in three reports they assessed the payments from 1879–80 to 1884–85 at amounts which, when exceptional charges were deducted, gave 421,000*l.* a year, or 6*l.* 15*s.* per man on the establishment of India, excluding deferred pay. In 1885–86 that establishment was increased by more than 10,000 men, rising from an average (including officers) of 62,249 from 1879–80 to 1884–85, to 72,422 in 1886–87; and, owing to the exceptional cost of this increase, the payment in 1885–86 was raised to 648,799*l.* For this and subsequent years the War Office rendered detailed claims which were examined by the Commission, whose assessments were as follows:—

——	——	Per Head.	Establishment.
	£	£ *s.* *d.*	
1886–87 - -	512,587	7 1 0	72,422
1887–88 - -	527,818	7 6 0	72,367
1888–89 - -	539,488	7 9 0	72,369
1889–90 - -	521,009	7 4 0	72,387

The small difference in the amounts led both Offices to concur that the data had now been obtained for fixing a capitation rate, regard being had to the larger number of drafts sent to India in 1890–91 and 1891–92; and, in the final report of Lord Northbrook's Commission, on the 22nd of March 1892,

they recommended that the claims for those two years should be settled by the payment of a capitation rate of 7*l.* 10*s.* The same rate having been continued subsequently, the following have been the payments:—

	Establishment.	Amount paid.
		£
1890–91	72,429	543,217
1891–92	72,496	543,720
1892–93	72,648	544,860
1893–94	72,503	543,772
1894–95	73,100	548,250

13. This does not include the deferred pay granted to the soldier in 1876, at the rate of 3*l.* for each year's service, in place of a pension, to each man on his discharge into the Reserve (or, if a sergeant, on the completion of 21 years' service, in addition to a pension). The amounts actually issued are divided in each case between the British and Indian Governments, according to the period passed by the soldier on the British and on the Indian establishment, respectively. The following is the amount charged to India:—

	£		£
1879–80	29,000	1887–88	138,118
1880–81	44,000	1888–89	180,500
1881–82	59,000	1889–90	213,192
1882–83	97,714	1890–91	203,999
1883–84	163,153	1891–92	241,437
1884–85	101,338	1892–93	200,159
1885–86	101,531	1893–94	188,009
1886–87	114,950	1894–95	230,000

Besides this, there is always a small sum, in 1893–94, 2,803*l.*, which is issued in India or by the India Office on behalf of the British Government, for which credit has been given in arriving at the foregoing amounts.

14. It is not desired, on the part of the India Office, to reopen the calculations upon which the actual capitation rate was arrived at, after examination in great detail by Lord Northbrook's Commission. Nor does it appear necessary to minutely inquire whether the establishment in India has been maintained at the proscribed strength; it must at one period of the year, after the reliefs have been completed, be above strength, and six months later below strength, in order to maintain the average; and, if it fell materially below the prescribed number, the Government of India would make representations.

15. But there are general principles of great importance to which it is desired to invite the attention of the Royal Commission, as militating against the equity of a merely arithmetical division of the charges.

16. In a letter to the War Office of the 8th of September 1871, the Duke of Argyll said that he could not "consider it either politic or just to lay "upon the revenues of India the entire cost of an "organization for furnishing recruits to that country, "which experience has shown to be far beyond what "is needed for that particular purpose"; and he added, "The abolition of a local European army in "India was a measure dictated by considerations of "Imperial policy; but it is questionable whether that "measure could have been so easily carried, if it had "been fully known how great would be the additional "burden thrown upon the Government of India. "Part of that addition was unavoidable, and may not "be too great a price to pay for the expected "advantages; but the Duke of Argyll is confident of "Mr. Cardwell's support in his desire that this "additional cost should be kept within the limits of "real necessity, and should not be aggravated by the "maintenance of a system of recruiting which appears "to be extravagant, and to have no reference to the "exigencies of Indian Service."

17. Although, when the system of short service was introduced by Lord Cardwell, he expressed his conviction that it would not entail any additional charge upon India, it has in fact imposed a heavy additional charge for transport, as the reliefs have to be effected at much shorter intervals.

18. The principal advantage of the short service system is that a reserve is provided by means of which the battalions at home can be raised frow a low peace establishment to their full strength for service in the field; but this advantage is not shared by India, where the battalions are always kept at their full strength. The system will, therefore, only benefit India when she requires reinforcements of British troops, provided that she is then charged only with the cost of the transport to India of the men sent from the reserve.

19. The exceptional period of the Mutiny is the one great instance of reinforcements being largely sent from England to the aid of India. On the other hand, England borrowed troops from India on the following occasions:—

- In 1859–60 for the China Expedition, 4 batteries of artillery, a company of engineers, a company of sappers, six regiments of European infantry, two of native cavalry, 11 of native infantry, and a considerable portion of the staff.
- In 1860 two, and in 1861 one regiment, for New Zealand.
- In 1867 the Abyssinian Expedition was mainly drawn from India, comprising five batteries of artillery, one company of engineers, six companies of sappers, one regiment of European and four of native cavalry, four of European infantry, eight regiments and one company of native infantry, a coolie corps, an army works corps, and the commander and staff.
- In 1875, for the Perak Expedition, one mountain battery of Royal Artillery, one regiment of British and one of native infantry, and one company of sappers and miners.
- In 1878, for the strengthening of the force in Malta, two field batteries of Royal Artillery, two regiments of native cavalry, six of native infantry, and four companies of sappers and miners.
- In 1878 the military operations in Afghanistan were entirely conducted from India, the force amounting to between 60,000 and 70,000 men.
- In 1882 the army in Egypt was reinforced by the despatch from India of one field battery and one mountain battery of Royal Artillery, three regiments of native cavalry, two of British and three of native infantry, and two companies of sappers and miners.
- In 1885 the following troops were sent from India to join the Soudan Expeditionary force:—One regiment of native cavalry, three of native infantry, and one company of sappers and miners.

20. It is evident, therefore, that India is utilised as a reserve for England in a much truer sense than England is for India; England not merely freely claims the services of British regiments for the time stationed in India, but she frequently uses the native regiments, towards the cost of which she has in no way contributed; and it may, therefore, be reasonably urged that England ought to assist in the maintenance in India of so large a force upon which England does not hesitate to draw.

21. Not only does India pay the whole cost of the maintenance of this large force; but, when the troops are required for service out of India on Imperial account, she is frequently called on to bear their ordinary charges, even for the time during which she is deprived of their services. On the other hand, when troops are lent to India, she pays the full cost from the date of embarkation from England. In the Afghan war of 1878 and the Egyptian Expedition of 1882 she received a grant of 5,000,000*l.* in the first case, and 500,000*l.* in the second, otherwise defraying the whole expenditure. In the expeditions to Abyssinia, Perak, and the Soudan, she paid the ordinary expenses of the troops; and only in the China Expedition and that to Malta was India relieved of all payments of the troops lent for the service.

22. Apart from the assistance rendered by India in time of war, it affords the best training ground for the British Army during peace: service in India is attractive, and the liberal treatment induces both officers and men to enter the army with the hope of obtaining employment in India. A large and valuable portion of the reserve consists of men whose training has been almost entirely acquired at the expense of India.

23. These and other arguments were dealt with at length (when the Marquis of Lansdowne was Viceroy and Lord Roberts Commander-in-Chief) in a Despatch from the Government of India, dated the 25th of March

1890, No. 70, of which the following are the concluding paragraphs:—

"21. The revenues of India have been charged with the cost of many changes in organization not specially necessary for the efficiency of the army in this country, and with the cost of troops employed on Imperial service beyond the limits of India. Millions of money have been spent on increasing the army of India, on armaments and on fortifications to provide for the security of India, not against domestic enemies or to prevent the incursions of the warlike people of adjoining countries, but to maintain the supremacy of British power in the East. The scope of all these great and costly measures reaches far beyond Indian limits, and the policy which dictates them is an Imperial policy. We claim, therefore, that, in the maintenance of the British forces in this country a just and even liberal view should be taken of the charges which should legitimately be made against Indian revenues.

"22. In conclusion it is imperative, in our opinion, that this long-standing question should be settled, and that the people of India, who have no voice in the matter, should not be able to complain that an excessive military tribute is demanded from the revenues of their country, while on her side England, with whom rests the final decision, should be able to show that this matter has been effected in a spirit of justice and consideration to India."

Non-effective Charges.

24. Under 4 Geo. IV., c. 71, the East India Company paid 60,000*l.* a year in full discharge of all claims for retiring pay, pensions, &c. in respect of the forces of His Majesty serving in the East Indies. The Act was repealed in 1861, by 24 & 25 Vict. c. 89, which fixed for 1861–62 a capitation rate of 3*l.* 10*s.* on the strength in India. By 25 & 26 Vict. c. 27 this rate was continued for five years, and after 1867 it was prolonged without legislative sanction. The number of officers and men serving in India averaged 63,124 for the nine years from 1861–62 to 1869–70, and the payment 220,933*l.*

25. From the 1st of April 1870 it was agreed that each pension should be actuarially valued, and that India should pay the proportion due for service rendered to the Indian Government. Under this system, India paid, during the 14 years from 1870–71 to 1883–84, at the rate of 10*l.* 1*s.* 4*d.* a man; but the amount varied greatly, from 6*l.* 7*s.* 8*d.* for the six years 1870–76 to 13*l.* 8*s.* 6*d.* for the seven years 1876–83; the charges in the latter period were exceptionally heavy, in consequence of the large number of men who, having enlisted during the Crimean war and Indian Mutiny, were then completing their 21 years' service, and of the abolition of purchase in the British Army, by which the payments for pensions to officers were greatly increased. Owing to the rapid increase of the non-effective charges, the quarterly advances proved insufficient, and arrears of 2,016,824*l.* were on the 31st of March 1883 owing to the British Government. In February 1884 a special payment of 1,000,000*l.* was made.

26. With effect from the 1st of April 1884 the Treasury decided to discontinue the system of receiving the capitalised value of the pensions due by India; and it was agreed that in each case of pension it should be actuarially calculated what was the chance of the pensioner being alive during each year, and that India should pay accordingly, thus avoiding on the part of India the necessity of verifying in future years the existence of the men on the pension list. So great was the immediate reduction of the charge arising from the change of system, that the provision which had been made in the estimates for 1884–85 on the old system was sufficient to clear off the whole of the remaining arrears, and, as India has thus discharged her liability for all pensions granted before 1884–85, the payments since that date have been very moderate, though they have necessarily continued to increase, rising from 36,289*l.* in 1884–85 to 430,674*l.* in 1894–95, with an average of 247,754*l.* in the 11 years.

27. As in the case of the effective charges, the India Office has no complaint to make regarding the method of dividing the non-effective charges, according to the extent of service rendered by each pensioner to the British and Indian Governments, respectively.

28. In regard, however, to the pensions of officers, it is urged that, by the abolition of the purchase system, which was in no degree effected in the interests of India, a very heavy system of pensions was entailed, in which India is compelled to bear her part, in addition to that for her own service. This point was pressed upon the Treasury, in a letter from the India Office of the 2nd of March 1883 (published at pages 29 to 31 of Parliamentary paper 342 of 1884), in which, when dealing with the arrears that had accumulated, Mr. Cross said, "Part of the increase is due to measures "carried into effect by the British Government for "purposes unconnected with India, such as the "abolition of the purchase system and consequent "grant of pensions to officers, the compulsory retire-"ment of officers on attaining certain ages, the re-"organisation of the Army Medical Department, and "other steps which, by compelling India at once to "become liable for the capital value of such pensions, "so far as they are due for service in that country, "hinders the non-effective charge from falling in "the manner expected when the arrangement was "originally made."

29. In commenting on the subject, the Government of India, under Lord Ripon, when Major Baring (Lord Cromer) was Financial Member of Council, in a despatch of the 10th of August 1883, No. 223 (page 46 of the same paper), wrote, "The rateable distribution "is exceedingly unfair to India; it pre-supposes that "there is a partnership between the two countries, "and so to a certain extent there is, but there is no "freedom of contract. It is a partnership in which "the rich and powerful partner is able to prescribe "the conditions under which the business shall be "carried on, with very little reference to the wishes "or to the means of the poorer and weaker partner." And, after quoting Mr. Cross's letter cited above, they proceeded, "The argument as regards the abolition of "the purchase system appears to us to be particularly "strong. That system existed in England from the "days of William III. It was a system with which "India was but little concerned, until the Crown took "over the direct government of the country. It "certainly appears to us exceedingly unjust that the "Indian revenues should be called upon to bear any "charge in order to get rid of this peculiarly English "abuse."

30. They continued with the following remarks:—

"We maintain, however, that, even in respect to those reforms which may be said to have increased the efficiency of the Indian, equally with that of the English army, the position of India is very disadvantageous. In respect to most, if not in respect to all of these reforms, the main question which had to be considered before they were undertaken was, we conceive, this: Is the increase of military efficiency to be gained by the reform so considerable as to more than counterbalance the increased burthen which will be thrown on the taxpayers? That is without doubt a very important consideration from the English point of view; and we do not doubt that, on the occasion of every proposed reform involving increased expenditure, the military and financial arguments bearing upon the question have been fully weighed with refereuce to the military and financial situation of England. But we submit that an equal degree of consideration is not, and, indeed, cannot be shown to the Indian aspects of the case. The Secretary of State for War in England, and the Government of which he is a member, have to consider any proposed change in the organization of the army from the Imperial, and not exclusively from the Indian point of view. If no military reform could be carried out without the assent of the Indian authorities, a position would be created which we freely admit would be intolerable. This is true enough. Nevertheless, we submit that it is equally true, if the division of expenditure between India and England is to be regulated on a purely arithmetical basis, and is to proceed on the assumption that the two countries are partners, having equal interests in respect of their joint undertaking, that the Indian authorities should have an equal voice in respect to the desirability or otherwise of carrying any proposed reform into effect. At present the Indian authorities are so far from having an equal voice in the decision on such matters, that it may be said, without exaggeration, that they scarcely have any voice at all. It has rarely, if ever, happened that the Government of India has been consulted before any reforms in the organisation of the British army have been effected, even although the execution of those reforms may have resulted in considerable burthens being thrown on Indian revenues.

It may, of course, be urged that the presence of the Secretary of State for India in the English Cabinet affords a sufficient guarantee that due weight will always be given to arguments based on the wants and interests of India. The Committee of the House of Commons, from whose report we have already quoted (para. 41), said that "the Secretary of State for India "in Council has the constitutional right of refusing to "pay for objects in which he considers that India has "no interest." Great importance is, we venture to think, to be attached to a statement emanating from so high an authority on such a subject, and recognising that the constitutional position of the Secretary of State for India is different to that of any other member of Her Majesty's Government. We do not know whether the right to which the Committee alluded has ever been exercised on any important occasion. We have certainly never heard of a case in point. It is obvious that until the right is exercised it can be of little practical value to India. We doubt, therefore, whether, as a matter of fact, the presence of a Secretary of State for India in the English Cabinet ensures that regard for Indian interests in the execution of military reforms which India has a right to expect, if the distribution of military charges between the two countries is to be regulated, as at present, on the assumption that they are partners in a joint undertaking.

"From another point of view, we venture to think that the fallacy of the partnership theory is apparent, when once the arguments on which that theory is based are closely examined. The military requirements of England and of India are so different that it is impossible that there should be any true partnership in the sense in which we are now using the word. Take the case of short service. It is clear at a glance that the responsible authorities of India must of necessity view this question from a wholly different standpoint from that adopted by the authorities of England. The ultimate basis of good government at home is not to be sought in a strong and efficient army, but in the patriotism, loyalty, and contentment of a free people. The army is not maintained to preserve internal order, although it may occasionally be used to assist the civil power in suppressing disorder. It is maintained to repel invasion, and to fight the foreign foes of England. The English Government has, therefore, endeavoured to copy the main feature of the German military system, which is this, that the peace establishment of the army should be kept as low as possible, and that it should mainly be regarded as a means of training soldiers, who, when trained, should be passed into the reserve. It is neither necessary, nor is it desirable, nor is it financially possible, to keep the whole military force of England, or of any other European country, under arms in time of peace. The greatest amount of economy and of military strength is to be found in that system which maintains the lowest possible peace establishment capable of expansion to the highest possible numerical strength in time of war. Hence the adoption of the short-service system in England, and generally, in most European countries.

"It is evident that the responsible Indian authorities have to approach this question from an entirely different point of view. A reserve of British troops available for service in India would, no doubt, be very useful; but the Indian Government cannot look upon its peace establishment mainly in the light of a school or training ground for the reserve. On the contrary, the first and most important feature in any military organisation suitable to the wants of India is that a relatively high peace establishment should be maintained in order to preserve internal order. We are unwilling to use the commonplace argument that India is held by the sword, because, although it is true, we do not consider it is the whole truth, and, moreover, we disagree with many of the conclusions which are frequently drawn from this argument. There can, however, be no doubt that British rule in India rests on force, moral and physical; and, as an inevitable consequence of this condition of things, such a question as that of short service in the army, with the attendant issue involved in the constitution of a reserve, must be approached, when considering Indian requirements, from a point of view wholly different from that which would be adopted in considering the requirements of England. Under these circumstances, we do not see how any partnership, properly so called, is possible."

31. This is not the only point deserving of consideration when dealing with the consideration of the non-effective charges. In respect of the soldiers, although the pensions are diminished, there is an increase of upwards of 200,000*l.* a year in the effective charges for deferred pay, upon which the Secretary of State for India in Council was not consulted, and which is the immediate result of the system of short service having been instituted, not merely not for Indian interests, but against the recommendations of the Government of India.

32. Another consideration in weighing the relative charges for pensions is that they are almost entirely spent in England, the revenues of which derive benefit from the income tax levied on their payment, while in many ways the expenditure is advantageous to the country in which it occurs, and the rates are relieved of the necessity of supporting the men who, but for their pensions, would have to be maintained by their parishes.

APPENDIX.

EXTRACT from FIRST REPORT of COMMITTEE on the CHARGES for EFFECTIVE SERVICES. 11th March 1869.

6. The Committee feel bound to ask the attention of Her Majesty's Government to the expense of the Indian depôts, in order that it may be ascertained whether the system on which they are at present maintained could not be greatly modified.

7. In confirmation of the opinion above expressed, the Committee annex three returns :—

A. A return of the cost of the depôt at Warley for 10 years from 1850 to 1859, as shown in the actual accounts in the India Office.

B. A statement showing in detail the items composing the charges under each head at Warley for the years 1854–55 and 1855–56, from which charges the totals in Statement A. and the charge for a recruit have been deduced.

C. A return from the years 1861–62 to 1867–68 of the estimated establishment of the Indian depôts kept up by the Imperial Government for cavalry and infantry, of the actual strength of those depôts, and of the actual number of recruits and drafts sent out thence to India.

8. The Committee would here remark that the War Office depôts include a very large staff, whilst the Warley depôt was conducted by a very small number of commissioned and non-commissioned officers for the supply of recruits to nine regiments of infantry and the whole of the artillery in India, including a small body of engineers.

9. The figures in the return C. show a cost of about 20*l.* for each soldier sent by the War Office to India; but this must be modified as regards one or two exceptional years, during which, although the depôts remained at their full strength, very few recruits were required for India, in consequence of each regiment in that country having been very largely reduced, but the outlay, nevertheless, appears to demand inquiry with a view to its reduction. Returns A. and B. show that recruits were sent out from the Warley Depôt for the years from 1850 to 1859 at an average cost of 19*l.* 15*s.* per man only, or, omitting the exceptional years of and after the Mutiny, at an average cost of 26*l.* 7*s.* 5*d.* per man for all arms.

NOTE by MR. SECCOMBE and GENERAL JAMESON on SECOND REPORT, 24th November 1869.

While concurring generally in the foregoing report, the members appointed by the Secretary of State for India to serve on this Committee feel it to be their duty to represent that they consider that the proposed arrangement is, in one respect, not just towards India.

They are of opinion that, as all expenses of raising, training, maintaining, and pensioning the troops whose services are lent to India are paid from Indian revenues, India is fairly entitled to a considerable credit for the value to the Imperial Government of the presence in this country of the staff and men engaged

in course of training. The troops are available to meet any emergency for which a home garrison is required; and the resignation by the War Office of any charge for a proportion of the expenses of the general, medical, and commissariat staff, &c. specified under Class 3, in Appendix A., as a set off to that advantage, appears to the undersigned to be entirely inadequate.

They are also of opinion that the periods of training, on which the charge for difference of numbers of men is based, are longer than are necessary with reference to the requirements of India; and that as the East India Company formerly found it safe and expedient to send soldiers to India after very short periods of training, the adoption of a somewhat similar course would tend greatly to reduce the charge on this account, an object that would be further facilitated by a reduction in the number and strength of the depôts.

NOTE by MR. SECCOMBE and GENERAL JAMESON on THIRD REPORT, 28th February 1870.

We have agreed to the following report, as showing the cost of cavalry and infantry recruits under certain prescribed conditions, which include the following charges:—

For cavalry recruits.—The pay of two officers seven non-commissioned officers, and 10 rank and file, for each cavalry regiment, as well as the levy money, free kit, pay, and all allowances, of 43 men for 10 months, in order to provide 32 recruits for India.

For infantry recruits.—The pay of four officers 12 non-commissioned officers, and six rank and file, for two companies of infantry, as well as the levy money, free kit, pay, and all allowances, for 80 men for seven months, in order to provide 60 recruits.

We consider that the mere enumeration of the strength in officers and men, with reference to the number of recruits to be provided, is sufficient to show that any scale of charge based thereon must be excessive, whereas among the advantages specified in the confidential "plan for carrying out certain reductions "of expenditure upon the army in India, and organising "a system for training recruits for battalions serving "abroad," it is expressly stated that the plan "affords "a more economical mode than that now existing of "training and supplying drafts."

How far the charge involved in the propositions before the Committee may be justified by other considerations than the best and cheapest mode of training recruits, it is not our province to consider. But we feel it to be our duty again to refer to the fact stated in the First Report of the Committee that the East India Company were able to send efficient artillery and infantry recruits to India at a cost of 26*l.* 7*s.* 5*d.* per man, instead of 136*l.* 13*s.* 11*d.* for cavalry, and 63*l.* 8*s.* 5*d.* for infantry recruits, as now proposed.

We are fully aware that the changes made in the terms of enlistment, pay, clothing, &c. would have increased the charge as incurred by the East India Company; but the proposed establishments for, and the periods of, training which have formed the basis of this Third Report of the Committee, appear to us to be enormously in excess of what can be possibly required for the purpose of properly recruiting the British Army in India.

NOTE by MR. SECCOMBE and GENERAL HANNYNGTON on FOURTH REPORT, 12th April 1872.

Having agreed to this report, which shows the sums chargeable to India under the special conditions placed before the Committee, and which recapitulates the recommendations contained in their previous reports, we consider it necessary to refer to the observations of the members appointed by the Secretary of State for India, which were attached to the Committee's Second and Third Reports, and to repeat that we entertain serious objections to the arrangements herein referred to, especially as to the charges for cavalry and infantry recruits,

1st. As regards cavalry, we consider that, for the purpose of providing annually 32 recruits for each cavalry regiment in India, it is not necessary that India should bear the whole charge of two officers, seven non-commissioned officers, and ten rank and file, as well as the levy money, free kit, pay, and all allowances, of 43 men for ten months.

2nd. As to the infantry, we do not consider that, in order to provide 60 recruits for each regiment, it is necessary that India should bear the pay of four officers, 12 non-commissioned officers, and six rank and file, for two companies of infantry, as well as the levy money, free kit, pay, and all allowances for 80 men for seven months.

We are also of opinion that, as these several troops of cavalry and companies of infantry are entirely at the disposal of the Secretary of State for War, and are available to meet any emergency for which a home garrison is required, a considerable portion of the charge on their account should be defrayed by the British exchequer.

We also desire to draw attention to the observations contained in the first and third reports of the Committee as to the cost of recruits provided by the East India Company and the rates referred to in this report; and we consider that, after making every allowance for changes in the terms of enlistment, pay, clothing, &c., the difference between those rates clearly indicates that it is not necessary, if Indian interests alone be considered, that recruits should be supplied under so expensive a system as that now existing.

CONTRIBUTION towards the EXPENSES of HER MAJESTY'S SHIPS in the INDIAN SEAS.

The Bombay Marine was instituted by Royal Charters in the reigns of Charles II. and James II., as an armed force for the purpose of defending the possessions of the East India Company in India, and of preventing interlopers from interfering with the company's exclusive rights of trade. In 1829 its title was changed to the Indian Navy.

2. At the close of the Mutiny it became necessary to consider what reduction of expenditure in India could be effected; and it was decided by Sir Charles Wood that the Indian Navy should be greatly diminished. "Her Majesty's Government," he wrote, "must be "responsible for the defence of India against any "serious attack by sea. This defence, indeed, would "probably be far more effectually provided by means "of operations in the Channel, the Mediterranean, the "Baltic, at the Cape, or on the coast of Tartary, than "by such a squadron as you propose to station upon "the coast of India; and, as India cannot be permitted to exercise any control over the disposition "of the Imperial Navy, so she cannot properly be "charged with any portion of its cost." . . . .

"The nature of the services required to be performed "by vessels of war in the Red Sea, and upon the "eastern coast of Africa, has recently been much "changed, in consequence of the extension of the "foreign slave trade and the more frequent presence "of foreign ships of war. Her Majesty's Government, "therefore, consider that, for the future, vessels of "the Royal Navy should be employed in those seas, "instead of vessels of the Indian Navy; and that, as "the purposes for which they are employed are "Imperial, so their cost should be borne by the "Imperial Exchequer." . . . .

"There remain, however, duties of considerable "importance which must be performed at the charge "of the Indian revenues, and for which some marine "service is required. The police of the Persian Gulf "should, in my opinion, at any rate for the present, "continue to be performed by a local service. India "is bound, in like manner with the Colonies, to "provide at her own cost sufficient means for the "protection of her ports against a small attacking "force from the sea, by batteries on shore or by "defences afloat. . . . . It has been arranged with "the Lords Commissioners of the Admiralty that "the portions of the survey of the coasts and harbours "of India which are yet incomplete or want verification, shall be completed by the vessels and officers "of the Indian Navy. When this is done, any further "surveys which may be required will be conducted "by the Royal Navy, and at the expense of the "Imperial Government, as in other parts of the "world." . . . . "It will always be desirable to "maintain a certain number of Government transports

" ready for sea." "The services which I have specified have always formed the principal employment " of the Indian Navy"; and Sir Charles Wood did not propose at once to abolish the service.

3. The Government of India, however, held very strongly "that it would not be for the public advantage " to maintain the Indian Navy, with its existing " organization, but reduced into a smaller service, for " the purposes only of protecting the Indian ports, of " suppressing the slave trade and piracy in the Persian " Gulf, and of transporting troops and stores;" and " Her Majesty's Government accordingly decided " altogether to abolish the Indian navy as at present " constituted, and to provide otherwise for the per- " formance of such duties afloat as cannot advan- " tageously be undertaken by vessels of the Royal " Navy. Such services as are required from ships of " war in the Persian Gulf will for the future be per- " formed by the Royal Navy." The expenses of "the " floating defences of the Indian ports and harbours " . . . will, of course, be defrayed out of the " revenues of India." "The transport of troops and " stores and other civil duties can be performed for the " future by a local service."

4. In consequence of the announcement in Sir Charles Wood's former despatch "that the naval " services in the Red Sea and on the eastern coast of " Africa would for the future be performed by vessels " of the Royal Navy, at the expense of the Imperial " Government," the Government of India had "di- " rected that the cost of the vessels of the Indian Navy, " which since that time (August 30, 1861), had been " employed in those waters, should be charged to the " Imperial Government." Sir Charles Wood, however, " said that "it was not intended that a charge which " has for many years been defrayed out of the revenues " of India should be assumed by the Imperial Govern- " ment before the services are actually performed by " vessels of the Royal Navy."

5. In accordance with this decision, the Indian Navy was abolished by an order dated the 22nd of April, 1863. The Admiralty having inquired what force had hitherto been maintained for such duties as the Royal Navy would henceforward be required to take "for the " protection of the Indian seas," the India Office, on the 7th of November, 1862, replied: "At all times " there have been several vessels of Her Majesty's " Navy in the Indian Seas for the general protection of " trade, and to be at the same time available for any " general service which might be required by the " Government of India. A considerable squadron of " the Royal Navy has always been maintained on what " is called the East India and China station, and the " number of ships and vessels on the coast of India has " varied from time to time according to the known or " anticipated requirements of the various posts of that " extensive naval station. So far as the wants of India " are concerned there has been since the Burmese war " little occasion for the services of the Royal Navy " vessels, whilst the demand for ships and vessels in " other parts of the command has increased; fewer " vessels have consequently been there for some time " past than it had been usual to keep there at former " periods." . . . . . Sir Charles Wood does " not anticipate that any active service is likely to be " required from the Royal Navy on the coasts of India, " but it is undoubtedly desirable that some of Her " Majesty's ships should show themselves from time to " time at the different ports in the country." "With " regard to the east coast of Africa and the slave trade " upon that coast, the only naval force there in former " years consisted of Arab dhows, and the only slave " trade was the domestic slave trade of the Arabs; no " foreign vessels of war ever showed themselves there. " In these circumstances the little duty required was " easily performed by the vessels of the Indian Navy. " Now, however, the French have established them- " selves at Zanzibar, and are endeavouring to do the " same in the Red Sea; their vessels are frequently " there, and it is stated that the slave trade has been " carried on under their flag, as well as under the " Spanish flag supported by them. They are also " establishing a line of packets down the Red Sea, and " the visits of their vessels of war will probably be now " more frequent than heretofore. These circumstances " entirely alter the state of the case, and it must be " obvious to the Lords Commissioners of the Admiralty " that Her Majesty's Navy must undertake this duty, " which may bring them into communication or pos- " sible collision with the vessels of war of other Euro- " pean powers. With regard to the Persian Gulf, the " duties there are on a much less scale, principally " consisting of the police of the Gulf, that is, prevent- " ing small Arab chiefs from rendering the navigation " unsafe by their piratical expeditions. Most of these " chiefs are bound by treaty not to engage in any " hostilities by sea. The force of the Indian Navy " which was generally maintained there has been one " or two small sailing vessels, and sometimes a steamer " . . . . Sir Charles Wood cannot doubt that the " occasional visits of small armed vessels are advisable. " For the purposes of the general naval defence of " India, and the service on the east coast of Africa, the " number of vessels must vary, as heretofore, according " to circumstances . . . With regard to the service " in the Persian Gulf and that within the Red Sea, " Sir Charles Wood is of opinion that probably two " small vessels, one to be generally available at Aden, " and in the Red Sea, and the other for occasional " visits to the Persian Gulf, would suffice, or at the " most three vessels, so as to provide a reserve in case " of necessity."

6. On receiving this letter the Admiralty replied, on the 12th November 1862, "that they will undertake for " Her Majesty's ships to carry out the various duties " as detailed."

7. In 1864 some difficulty arose in meeting the various demands of the Bombay Government respecting naval requirements in the Red Sea and Persian Gulf and also at Zanzibar, and Sir Charles Wood wrote, "All naval " duties connected with the general defence of India, " the protection to trade generally, the suppression of " piracy, and the putting down of the slave trade, " which duties are all more or less warlike in their " character, will be discharged by vessels of the Royal " Navy, whether such duties may be required on the " seaboard or coasts of India, or in any part of the " Indian seas or gulfs, and it was clearly understood, " in correspondence with the Lords of the Admiralty " at the time the Indian Navy was abolished, that their " Lordships would undertake for Her Majesty's ships to " carry out those duties."

8. The Government of India not being satisfied that they had sufficient control over the naval force, the subject was reconsidered in 1867–69, and it was determined to maintain six suitable ships of war in the Indian seas, three to be entirely at the disposal of the Government of India for employment in the Persian Gulf, and the remaining three also at their disposal in all possible cases for general employment in the Bay of Bengal or elsewhere. The vessels so detailed were a corvette of 1,951 tons and five gunboats. Hitherto India had paid nothing for the services of the Royal Navy, but henceforward a charge was "to " be made upon Indian revenues on account of" the six ships, "estimated, at an annual rate of 70*l.* per " man, at 70,000*l.* per annum; and, while all six " vessels are to have dock accommodation free in " Bombay, the charge for labour and materials on " account of the three vessels employed in the Persian " Gulf will be borne by the Government of India. " The cost of coal also expended by those three vessels " will form a charge against the Government of India." The estimate of 1,000 for the complement on which the 70,000*l.* was based, was in excess of the actual numbers of officers and men employed.

9. In 1876 a question arose as to whether one of the vessels (the "Daphne") employed in the Persian Gulf, when re-commissioned on the Bombay station, had not received a double outfit at the expense of India; and Lord Salisbury wrote, "that it is presumed that each " of the three vessels allotted by the Admiralty for " service in the Persian Gulf, under the terms of the " agreement entered into in 1869, will be, on entering " upon her service, in a thorough state of efficiency " and repair, and that, if not, she should be brought " into that condition at the expense of the Imperial " revenues, before any claim can be admitted under " the above agreement, to repairs or refitting at the " expense of the Government of India. It is obvious " that under such an arrangement only would it be " just that these vessels should, at the close of their " tour in the Persian Gulf, be placed, at a charge " against Indian revenues, in a state of repair for " recommissioning on another station."

10. It was thought desirable in 1881 to provide vessels of a more suitable character for service in the Persian Gulf, under the agreement of 1869; and the "Sphinx" was constructed for the purpose, and commissioned in 1883, taking thenceforward the place of the three gunboats previously employed.

11. The Auditor of the Home Accounts having challenged the propriety of the payment of the full subsidy of 70,000*l*, a year, on the ground that some of the six vessels had been employed in the suppression of the slave trade on the African coast, the matter was examined, but eventually the claim of the Admiralty was satisfied, on their assurance "that three vessels "have always been employed on the Indian Station, "which were available for the service of the Indian "Government when required in addition to the three "vessels employed in the Persian Gulf."

12. In 1875 an agreement was made with the Admiralty that certain percentages should be mutually added to actual disbursements in the dockyards, in order to cover indirect expenditure on establishment and contingencies; and in 1885 it was further agreed that the percentage so added "should be held to cover "all charges for docking and dock hire, whether, in "regard to the ships docked in India, such ships are "on the strength of the Indian squadron or not."

13. Disallowances having been made from the annual subsidy, on the ground that the complement of six vessels had not been at the service of the Government of India for certain periods, a departmental committee was appointed to examine the claims.

14. In their first report, they recommended that, when a vessel was laid up in dock for a prolonged refit, it should be held that she was removed from the disposal of the Government of India, and that a proportionate deduction should be made from the subsidy; on the other hand, all repairs arising from the service of the ships in the Persian Gulf must be borne by India. The outstanding claims were adjusted accordingly.

15. In the final report of the Committee on the annual subsidy, it was recommended that the number of vessels to be employed continually in Indian waters should be reduced to four, of which one should always be in the Persian Gulf; that the subsidy should be 38,500*l*. a year (that is to say, for 550 men at 70*l*. a year) subject to a reduction of 28*l*. 15*s*. a day for each vessel below the complement; that the Government of India should pay the cost of extra coal consumed in service under the requisition of the Indian authorities; that 5 per cent. should be annually paid towards replacement, on the cost price of the "Sphinx" or any other vessel constructed under special design exclusively for service in the Persian Gulf; that, when a vessel had been in dock more than 30 days she should cease to be reckoned in the complement; that all repairs should be effected at the cost of the Admiralty, subject, in the case of vessels that have served in the Persian Gulf, to a proportionate contribution by India; and that no charges should be made for docking, except where actual outlay is incurred. The Admiralty intimated on the 29th of February 1888 their readiness to accept the proposals for 1888–9, though, if newer types of vessels, carrying more expensive complements, should be substituted for the vessels then on the East Indian station, their cost might exceed the capitation rate of 70*l*. a man.

16. The Treasury on the 30th June 1888 wrote that, in their opinion, the first step was "to ascertain, as "nearly as possible, the full annual cost of the force, "effective and non-effective, and then to determine "whether the whole ought to be paid by India, or "whether any, and if so what, abatement should be "made from the charge in respect of the duties that "must be occasionally performed by those vessels, or "at least by the three outside the Persian Gulf, for "the Imperial Government. The charge of 70*l*. per "man, which the Committee propose to maintain, was "calculated 20 years ago, and apparently on the basis "of pay and victualling only . . . . When a "larger squadron was engaged by India, and the "subsidy was based on a fictitiously large force of "men, there may have been a justification for not "charging India with the ordinary cost of maintaining "the vessels, which will no longer exist when the "squadron is reduced by one-third, and the subsidy is "based on the number of men in actual employment." Subject to these remarks, they agreed to the proposed settlement to March 31st 1889; it was afterwards extended for another year.

17. In three despatches in 1887 and 1888, the Government of India represented the inefficient character of the vessels on the Indian station; and the Admiralty undertook to send out two newer ships, and to give further consideration to the subject when the existing commissions should be drawing to a close.

18. On the 6th of January 1890 the Treasury informed the India Office that the cost of the four vessels then in Indian waters was estimated at 76,079*l*. per annum, and they could not continue to accept only 38,500*l* The India Office replied by reciting the history, and pointing out that it was no part of the original arrangement "that the Admiralty should be relieved "at the cost of Indian revenues of any portion of the "expense, which they had always borne, of maintaining "a naval squadron in Indian waters." The contention of the Treasury that India should pay the whole cost of the ships "would be only reasonable were the squadron "placed at the sole disposal of the Government of "India, and under their undivided control, in the "same way that the British troops in India are "employed under their orders. Such, however, it "has been shown, is not the case.

19. Shortly after this letter was written, on the 26th of March 1890, a conference was held at the Foreign Office to consider various financial questions in dispute between the British and Indian Governments, of which one was the subsidy for the East Indian squadron.

20. The Treasury objected to the basis of 70*l*. per man as obsolete. It was agreed that "the Indian "Government is to be consulted as to the number and "class of ships required in the Persian Gulf and off "the coasts of India, for Indian purposes. When "that number is settled by the British and Indian "Governments jointly, it will be arranged that the "ships are not to be employed beyond certain limits, "to be agreed upon, except with the consent of the "Indian Government. They will be under the control "and orders of the Naval Commander-in-Chief, to "whom will be sent the wishes of the Indian Govern-"ment, with which it will be his duty to comply. "India is to pay the whole cost, effective and non-"effective, of them. Special reference was made in "this connection to the example of the Australasian "Colonies (which are contributing liberally for the "protection of their floating trade)." As to the subsidy for 1890–1, Mr. Forwood was to draw up a memorandum.

21. This memorandum was forwarded by the Treasury to the India Office on the 19th of December, 1890, and showed the cost of the four vessels then composing the squadron to be 103,577*l*. a year, which amount was accordingly claimed for 1891–2.

22. The Government of India had, in a despatch dated the 25th of August, 1890, No. 17, expressed an opinion that the number of vessels could not be conveniently reduced below four, but that the vessels might be smaller and cheaper. In view, however, of the final arrangements which had been made for the floating defences of these harbours, Lord Cross asked whether they could not bring down their demands to three ships of moderate size. He also pointed out that, under the Australasian agreement, no reduction was to take place in the normal strength of the naval force employed on the Australian station, and that the same principle would no doubt be followed in regard to the East Indian station.

23. The reply of the Government of India was to fix the number of vessels at three, the "Sphinx" in the Persian Gulf, and two gunboats of the "Pigeon" class, one to be ordinarily at Aden, and the other in the Bay of Bengal. In communicating this to the Admiralty, on the 25th June, 1891, Lord Cross said that he saw no reason why India should pay more than would be claimable under the Australian agreement, and that the arrangement should be reconsidered after five or ten years. Subject to this understanding, he was prepared, from the 1st of April, 1891, to pay the full cost of those vessels, effective and non-effective, with a charge for depreciation amounting to 49,600*l*. a year. The Admiralty, on the 17th of November, 1891, said that such a reduction did not meet the spirit or intention of the Conference; they had met the wish of the Government of India for better ships; and, unless the Secretary of State in Council gave way, they pressed that the question should be referred to a departmental committee. To this last proposal the India Office agreed, "provided their discussions "are limited to the question of the number of vessels "required for Indian purposes, a point which, by the "terms arranged at the Conference, is to be settled by "the British and Indian Governments jointly.

24. A committee having accordingly been appointed to consider "the number and class" of ships required for Indian purposes, held two meetings on the 11th

and 25th of January, 1892, but they found it impossible to come to an agreement as to the scope of the words "Indian purposes" for which the vessels were required. Thereupon it was agreed to refer this point to an arbitrator, but the case which the Treasury wished to submit to him was not identical with that which had been agreed upon between the Admiralty and the India Office. The Secretary of State in Council was unable to assent to the proposed variation of the terms, which caused further delay. At last, however, in 1895 it was agreed that the whole matter should be referred to Lord Rosebery, as Prime Minister, whose award was given on the 19th of February, 1895, in the following terms:—

(1.) "That the Indian Navy did perform or co-operate in the performance of duties more extensive than are now admitted under the expression 'Indian purposes,' as limited in the India Office case.

(2.) "That this expression cannot be limited to merely maritime police and the repression of piracy, but must be held to include some portion, at any rate, of the duties devolving on the Royal Navy for the defence of India and the protection of trade in Indian waters.

(3.) "That the transaction of 1862 represented at most a temporary waiver of the claim of the Imperial Government to a contribution from India in respect of the performance of those duties.

(4.) "That in any case nothing then said or done could affect the right of the Imperial Government to raise such a claim on its merits at any subsequent period.

(5.) "That the basis on which such contribution should be calculated does not admit of a permanent definition, but should be settled between the Home and Indian Governments from time to time at fixed intervals of, say, 10 years."

25. Further correspondence ensued, the Admiralty maintaining the validity of their claim to 117,000*l.* a year from 1891 (exclusive of 4,000*l.* paid in India for repairs of the "Sphinx"); but as a compromise, they have proposed, and the India Office has accepted the proposal, that 117,000*l.* (the sum inserted in the Navy estimates) shall be paid this year, and 100,000*l.* in future, till March 31st 1901, all arrears being waived, and the Indian Government accepting the repairs of the "Sphinx" in India. They will also pay the cost of coal used in the Persian Gulf, and of that consumed in other vessels when on services performed at the request of the Indian authorities.

26. In view of the decision given by the Prime Minister, it is not desired by the India Office to dispute the arrangements recently made upon any arithmetical or technical grounds. But the attention of the Commission is requested to the broad question whether it is right to exact from India within 17,000*l.* of the full charge, effective and non-effective, of the squadron, seeing that—

(1) Although the admiral is required to comply with the wishes of the Government of India when communicated to him, still the ships are not at their disposal in the same degree that the Army is.

(2) The vessels not employed in the Persian Gulf are under the command of the Admiralty, and must be occasionally employed on other than Indian services (*see* Treasury letter of June 30th, 1888) for which India gets no return.

(3) The number and class of the vessels employed is not that which the Government of India think necessary, but that which the Admiralty determine.

Post Office Payments under the Postal Arrangement with the Treasury.

The charges and receipts accruing under the contract with the Peninsular and Oriental Steam Navigation Company were divided between the British and Indian Governments in certain proportions, in accordance with an award made by Viscount Halifax in 1876, which has since been slightly modified to meet the altered circumstances. By the contract of 1879 the subsidy by the British Government to the Company was reduced from 430,000*l.* to 370,000*l.*, and by that of 1888 to 265,000*l.* On the United Kingdom and India joining the Postal Union, the letter rate of postage was reduced from 8*d.* to 6*d.* by Brindisi, and from 6*d.* to 4*d.* by Southampton, per half-ounce; and in 1880–1, when the Southampton route was abandoned, it was further reduced to 5*d.* In 1891 it was again reduced to 2½*d.*, and it was then arranged that each Government should retain its own receipts, and the contribution by India was fixed at 60,600*l.*, in addition to one penny per letter rate for the cost of the continental transit on the homeward mail. The contract will expire in 1898

Red Sea and India Telegraph.

The Red Sea and India Telegraph Company was formed in 1858, the Treasury giving a guarantee for 50 years to make up the dividend to 4½ per cent. on the capital.

In 1861 an Act was passed, declaring that the guarantee was not conditional on the telgeraph being in working order. By a further Act of 1862, the line having ceased to transmit messages, the property was transferred to a new company; and the guarantee to the old company was converted into an annuity of 36,000*l.* for 46 years. It was further provided that India should pay 18,027*l.* annually to Her Majesty's Exchequer, being half the annuity and cost of management up to August 4th 1908.

Zanzibar and Mauritius Cable.

In March 1891 a departmental committee recommended in the interests of India, and mainly on strategic grounds, that a cable should be laid from Zanzibar or its neighbourhood viâ the Seychelles to Mauritius.

The total subsidy paid to the Eastern Telegraph Company, which undertook the work, was fixed at 28,000*l.* a year for 20 years (14,000*l.* for the Zanzibar-Seychelles section, and 14,000*l.* for the Seychelles and Mauritius section). Of this annual sum, Mauritius contributes 7,000*l.*, the Seychelles, 1,000*l.*, and the remainder is equally divided between the British and Indian Governments. The line was opened on the 24th of November 1893.

In the event of either section being interrupted for a period exceeding six months at a time, the subsidy for the section is to cease until the cable is again in good working order. The period of six months may be extended, if necessary and proper.

All messages on the service of the Imperial, Colonial, and Indian Governments, are to be transmitted at rates not exceeding one half of those charged to the general public.

Mission to the Court of Persia.

In 1835 the East India Company agreed to contribute 12,000*l.* a year to the maintenance of the Persian Mission. In 1858, when the Mission was for a time placed under the Government of India, the Imperial Government agreed to contribute 5,000*l.* On the mission being in 1859 again transferred to the Foreign Office, Lord John Russell refused to revise the agreement; and thus it became recognised that India should pay $\frac{12}{17}$ths of the cost, subject to a maximum of 12,000*l.* a year.

In 1871 the Select Committee on Diplomatic and Consular Services recommended that the proportion paid by India should be reduced, as it has been found that out of an average of 15,122*l.* a year the Imperial Government had paid only 3,122*l.* Correspondence ensued; and at length the annual charge against India was reduced in 1880 to 10,000*l.*, and in 1891 to 7,000*l.* till the 31st March 1901.

Her Majesty's Establishments in China.

In 1834, when the cost of the establishments of the British Superintendents of Trade in China was accepted as a charge on the Imperial revenues, it was agreed that one-third should be defrayed by India. Owing to the great increase in the total cost of the establishments, the amount falling on India rose from an average of 4,676*l.* between 1835–6 and 1842–3 to 22,000*l.* or 23,000*l.* from 1867–8 to 1871–2.

From 1859 onwards the Secretary of State in Council constantly protested against the charge, and especially

against the claims for 1872–3 and subsequent years. In 1876 the Government of India proposed an annual payment of 10,000*l.* In 1877–8 a payment was made by the India Office of 58,327*l.*, in satisfaction of all arrears to March 31st, 1876, thus making the average annual payment 20,962*l.* from April 1st, 1867, to that date. The Treasury, however, demurred to so great a reduction as was implied by agreeing to 10,000*l.* a year from India; and at length 15,000*l.* a year was accepted with effect from April 1st 1876. This arrangement, in spite of protests that the charge was too heavy, lasted till 1890, when a further reduction to 12,500*l.* was accepted, as a mean between 15,000*l.* and 10,000*l.*, the agreement to be in force till March 31st 1890.

SUBSIDIES to the EUPHRATES AND TIGRIS STEAM NAVIGATION COMPANY, for a MAIL SERVICE between BUSSORAH and BAGHDAD, and in aid of the STEAMSHIP SERVICE on the KARUN RIVER.

(1.) *Tigris Subsidy.*

In 1863 a contract was made between the Secretary of State for India and the Euphrates and Tigris Steam Navigation Company, for a mail service between Bussorah and Baghdad, a subsidy of Rs. 24,000 a year being given for eight trips, which might be increased to 12 on the demand of the Government.

In 1866 the Secretary of State accepted an offer from the company to increase the number of trips to 24, for an annual subsidy of 4,800*l.*

In 1873 the Government of India represented that the British India Steam Navigation Company were willing to undertake a weekly service for Rs. 2,400 a month. The Euphrates and Tigris Company were thereupon asked whether they were willing to accede to the same terms, and they replied in the affirmative, conditionally on obtaining permission to run a third vessel on the Tigris. Eventually, in 1875, a contract was made with them, stipulating for three trips a month by two vessels for a subsidy of 3,600*l.* a year, with a condition that, whenever a third steamer should be permitted on the rivers the service should be made weekly, and the subsidy be reduced to 2,400*l.* a year.

In 1879, although the third vessel was not permitted to run, the service was made weekly, the subsidy being unaltered.

In 1884 a fresh contract was made with the Euphrates and Tigris Company, for 10 years, providing for a weekly communication between Bussorah and Baghdad, on payment of an annual subsidy of Rs. 36,000 a year. The Company have not been permitted by the Turkish Government to employ the third steamer which they provided, except occasionally as a substitute for one of the others.

It has been agreed that a fresh contract for 10 years shall be made with the Company, the subsidy being reduced to Rs. 24,000 a year, but the contract has not yet been signed.

The Government of India represent that the Indian Post Office does not require the grant of a subsidy to secure a weekly mail service in a foreign country belonging to the Postal Union; and, though it is desirable to continue it on political grounds, they hold that the whole charge should not fall on the revenues of India.

(2.) *Karun Subsidy.*

The Persian Government, in 1888, opened the Karun River to general navigation as far as Ahwaz, and the Euphrates and Tigris Steam Navigation Company thereupon instituted a fortnightly service on this route, carrying the mails free of charge. Finding difficulties, however, thrown in the way of the development of the trade, they were unable to continue the service without assistance, and it was agreed with the Treasury that India should bear one-half of a postal subsidy, fixed on a maximum of 3,000*l.* a year during 1890 and 1891, and 2,000*l.* a year from 1892 to 1894.

The Secretary of State, deferring to the views of the Government of India, at first declined to continue the Indian contribution for another five years; but, with the concurrence of the Government of India, he has consented to resume the payment of a moiety of the subsidy of 2,000*l.* for the present, on the understanding that the whole question of the distribution of the charges on account of the Tigris and the Karun subsidy is referred to the Commission now sitting.

CONTRIBUTION to the JEDDAH CONSULATE.

In view of the number of Indian pilgrims passing through Jeddah to Mecca, India agreed to pay half the net cost of the Consulate. The amount is revised triennially, on the actual charge in the three preceding years. The triennial payments have been fixed at 475*l.*, 500*l.*, 410*l.*, and 458*l.*

ADEN.

Aden was acquired by the East India Company in 1838 in the interests of shipping passing between India and the Red Sea, as a coaling station and for purposes of protection in cases of shipwreck. Direct seaborne trade between Europe and the Arabian coast hardly existed in those days before the construction of the Suez Canal.

The Red Sea, then a mere backwater, has become the main channel of trade between Europe and the East. The importance of Aden as the principal coaling station and naval fortress on this trade route is consequently very different from what it was in 1838.

Aden, as now constituted, includes the following British possessions directly administered: — Aden, 21 square miles; Shaikh Othman, 39 square miles; Little Aden, 15 square miles; and the island of Perim, 5 square miles.

The political relations with chiefs having authority on the South-Eastern littoral of Arabia, which are of some Imperial as well as Indian importance, have their centre at Aden, and the Somali coast on the African side of the Gulf has been occupied as a necessary and principal source of food supplies for the garrison and settlement of Aden, which is girt about by sea or sandy waste. The Somali Coast Protectorate forms a part, under existing arrangements, of the political charge of the resident at Aden.

Of recent years the trade of Aden has grown to a position of considerable importance. In 1894–5 it was valued at Rs. 86,802,214; of this trade India's share was nearly 19 per cent., and the share of the United Kingdom nearly 9 per cent. Suakin, Zanzibar, Mauritius, the Straits Settlements, and Hong Kong also enjoyed appreciable shares in this trade.

In these figures are not directly included the trade of the Somali Ceast, which amounted to Rs. 9,437,966.

The following statistics of shipping entered and cleared at the port of Aden (Perim is not included) in 1894–5 will show the enormous value of Aden as a port of call, and the relative shares of this value accruing to (*a*) the United Kingdom, Colonies and British Possessions, other than India (with Burma), (*b*) India (with Burma), (*c*) Foreign countries (including Zanzibar):—

	(*a*) United Kingdom, &c.	(*b*) India.	(*c*) Foreign Countries.
Tonnage entered	685,024	695,510	899,945
„ cleared	819,615	530,888	931,715
Total	1,504,639	1,226,398	1,831,660
Percentage	33	27	40

The tonnage totals do not include the ships calling at Perim only. In numbers, the Perim shipping is about 37 per cent. of that at Aden; the above figures might, therefore, be increased to that extent, to include Perim, which for the purposes of this note must be considered a part of Aden.

In estimating these relative proportions, it must be remembered that ships entering from, or clearing for India may have originally come from, or may be subsequently proceeding to, ports in the further east, and in most cases to ports belonging to the British Empire. Of the shipping passing through the Suez Canal, 57 per cent. called at Aden, and about 20 per cent. at Perim *en route*. The total shipping using the canal exceeded 8,000,000 tons, of which nearly three-fourths were British. The actual number of merchant vessels that passed through the Suez Canal in 1894–95 was 3,255; of these, 2,462 passed the Port of Aden; of this number 1,309 called at Aden, and 486 at Perim, and 667 at neither station.

As to the nationality of ships calling at Aden, out of 1,309 merchant steamers, 837 carried the British flag. The port was also used in 1894–95 by 33 vessels of the Royal Navy, 10 British Government troopships, and 30 vessels of the Royal Indian Marine.

In times of peace almost the whole of the trade between Europe and the coasts of Asia, and of Eastern African, passes by Aden.

As a naval fortress and coaling station for ships of war, Aden is a place of great importance, and its value has been so far recognised by the British Government that a moiety of the cost of the permanent Aden defence works has been borne by British revenues.

The British Government has also borne a share of the charges for the Red Sea Telegraph.

In one other respect Aden has been of very appreciable value to the United Kingdom. It has assisted, and at the same time diminished the cost of, the operations undertaken in pursuit of the British policy of suppressing the slave trade on the Red Sea and East African coasts.

So long ago as 1861 the Government of India urged the propriety of the expenses of Aden being divided between Great Britain and India, and its transfer to Imperial control under certain conditions was, at a later date, seriously discussed.

The following is a summary of the expenditure on Aden in 1894–95 charged on the revenues of India:—

			Rx.
Military charges			206,584
Military works			9,376
Special defence works			32,010
Civil works			3086
	Rx.		
Civil charges	49,128		
Civil receipts	22,890		
			26,238
Net charge			Rx. 277,294

Against this total must, however, be set the share of special defence works. Expenditure repaid or to be repaid by Great Britain, which cannot amount to more than Rx. 16,005, and which, owing to various objections urged by the War Office, will undoubtedly be considerably less.

The Somali Coast is practically self-supporting.

In 1894–95 the charges were		Rx. 29,361
And receipts		,, 28,016
Net charge		,, 1,345

This net charge appears, presumably, a a single item among the civil charges of Aden, shown above.

Examinations for the Indian and Home Civil Service.

The first examination for the Indian Home Civil Service combined was held in August 1895, the cost being 1,860*l.*, of which the Treasury bore 250*l.*, and 1,610*l.* fell on India. (In 1892 India had paid 1,481*l.*, in 1893, 1,198*l.*, and in 1894, 1,232*l.*)

The number of candidates in 1895 was 24 for the Home Service only, 105 for India only, and 49 for both services. At these numbers the charge of 1,860*l.* gave about 10*l.* 9*s.* per head; so that the Treasury bore approximately its proportion for the Home candidates only, but nothing for the 49 Joint Service candidates, while the printing charges were borne entirely by the India Office.

On this being pointed out, the Treasury agreed in future to bear the rateable proportion for those who compete for the Home Service only, and half the share for those who enter for both Services.

Payment for Indian Emigrants.

Since 1875 India has paid 300*l.* a year to the Consul at Réunion for house allowance and other incidental expenses, and an outlay not exceeding 200*l.* a year for two interpreters.

In 1884 India agreed to pay 100*l.* a year for an interpreter to the Consul at Surinam, which was raised in 1886 to 150*l.*

Voluntary Payments in which both the United Kingdom and India share.

International Tariffs Bureau at Brussels.

The United Kingdom contributes 6,893 francs a year, and India contributes 4,970 francs.

Voluntary Payment by India, where the United Kingdom contributes nothing.

Imperial Institute.

India contributes 1,000*l.* a year.

APPENDIX No. 49.

Memorandum of Civil and Naval Services in respect of which a Contribution is made by India to the British Government.

(*Handed in by Mr. G. L. Ryder.*)

(1.)—*The Persian Mission.*

This Mission was first established in 1810, at the charge of the United Kingdom, but 13 years later it was transferred to the East India Company, as being a service mainly of interest to India. From 1823 to 1835, the Mission was wholly supported from Indian funds. In 1835 it was re-transferred to the Foreign Office, for diplomatic reasons, and the East India Company contributed 12,000*l.* per annum (its then full estimated cost) for its support. This arrangement lasted until 1859, when the Mission and the under-mentioned Consulates were placed for one year (1859-60) under the Secretary of State for India in Council, and the United Kingdom contributed 3,000*l.* per annum, out of an assumed cost of 15,000*l.*, for the support of the Mission and 2,000*l.* (being full estimated cost) for the Consulates at Tehran, Tabreez, and Resht. After the experience of a single year, however, it was found more convenient to place both the Mission and the Consulates once more under the Foreign Office; and from 1860–1 to 1879–80, India contributed, as of old, 12,000*l.* per annum for the support of the Mission, leaving the Consulates, as theretofore, to be paid for wholly by the United Kingdom. (9536/89.)

In 1880, in fulfilment of a recommendation by the Select Committee of 1871 on Diplomatic and Consular Services, the Indian contribution was reduced to 10,000*l.* per annum, and it was continued at that rate until 1890–1 inclusive.

In 1891 (14742/91) the amount of the contribution was reduced to 7,000*l.* per annum, under protest from the Treasury, and so it has remained since 1891–2 inclusive, and is to continue until 31st March 1901.

As Turkey and Russia are within the sphere of European diplomacy, and other European Powers are in diplomatic relations with Persia, it is expedient that the British Mission and certain of the British Consulates in Persia should be under the control of the Foreign Office, due regard being paid to the wishes of the Government of India in the matter of appointments.

On the other hand, as the maintenance of Persia in its integrity and independence is essential to the well-being of Her Majesty's Indian Empire, whilst it is at most only desirable for the United Kingdom, equity requires that the greater part of the cost of the British Mission at Tehran should be borne by India.

But over and above the political argument, there are commercial reasons for charging India rather than the United Kingdom with the cost of diplomatic and consular representation in Persia. If India be credited

with two-thirds of her direct trade in Manchester goods with Persia, her commercial interests in Persia are more than double those of the United Kingdom. Moreover, the telegraphic and other correspondence between Tehran and India far exceeds that between Tehran and the United Kingdom.

It will naturally be asked why the estimate of the Indian share of the cost of the Mission should have been so much reduced of late years. At first India contentedly bore the whole of it, then $\frac{1}{2}\frac{2}{3}$ths, afterwards reduced to $\frac{1}{1}\frac{2}{7}$ths, then $\frac{1}{1}\frac{0}{8}$ths, and now perhaps $\frac{3}{5}$ths, is the proportion grudgingly allowed to be Indian. The explanation seems to be that the Government of India has only gradually become alive to the very heavy direct charge incurred by that country on account of Persia. This charge is now well known, and native opinion is stated to be particularly sensitive on the subject of expenditure outside the Indian Empire.

Taking Persia as a whole, and including Consulates as well as the Mission, the expenditure of India may be estimated as follows, on data given to the Treasury in 1891:—

	£	£
Persian Mission:		
Direct, for Telegraph Establishment, &c.	3,350	
Indirect, being contribution paid to United Kingdom	7,000	
		10,350
Khorassan Agency		3,750
Bushire Agency		6,900
Miscellaneous, say		3,600
		£24,600

The expenditure of the United Kingdom, on the other hand, may be estimated thus:—

	£	£
Persian Mission:		
Direct, for salaries, pensions, buildings, stationery, and miscellaneous	18,500	
Less Indian contribution	7,000	
		11,500
Telegrams		2,000
Persian Consulates		2,900
		£16,400

A proportion, such as the above, of $\frac{3}{5}$ths to India and $\frac{2}{5}$ths to the United Kingdom, is stated to be as much as the Government of India can accept or justify to Native opinion. India, however, does not commit herself to any particular proportion. She offered 7,000*l*., having previously intended to pay only 5,000*l*., and whatever the Persian Mission may cost, in fact, she protests that she will not pay more, and will not discuss the arguments of the Treasury, based on political considerations, and historical and commercial data.

This is a position which it is open to the Secretary of State and Council of India to adopt, in their anxiety to reduce all charges on Indian funds, knowing, as they do, that however inadequate may be the Indian contribution, the Persian Mission will continue to be maintained, because Imperial interests weigh with the United Kingdom to an extent that they do not with any other portion of the British Empire.

It is sometimes argued that, because a service is acknowledged to be Imperial, *i.e.*, to be of interest to the whole empire as well as to the particular part of the empire in which the service arises, the cost of it ought to be borne by the United Kingdom. This might be equitable if the revenues of the United Kingdom were derived, *pro ratâ*, from the whole empire, instead of from the British Islands alone. But under a system by which each part of the empire, except those islands, appropriates its own revenues to its own purposes exclusively, the fact that a service arising locally is Imperial as well as local, is not of itself a justification for charging its cost on the United Kingdom. The whole empire is interested in the welfare of each of its parts. If the essential needs of one part are more than it can supply without external assistance, aid may be looked for from other wealthier and stronger parts, and especially from the United Kingdom; but the first charge for meeting those needs falls legitimately upon the part of the empire that is directly affected by them and in which they arise.

The protection of Indian interests in Persia by diplomatic representation is not more Imperial than the military defence of India is Imperial, and both alike are properly chargeable on Indian revenues.

(2.)—*Diplomatic and Consular Establishments in China.*

The East India Company bore the whole expense of diplomatic and consular intercourse with China, so long as it enjoyed a monopoly of British trade with China. In 1834 that monopoly ceased, and the Act 3 & 4 Will. IV. c. 93. threw the trade open to all British subjects, and authorised the defrayment of the expense of the superintendents of trade, through whom the diplomatic and consular representation of the United Kingdom was to be effected, by means of a tonnage due on all vessels belonging to British subjects that entered a China port where a superintendent was stationed, and an *ad valorem* duty on the goods carried therein. Instead of levying these imposts, however, it was thought better to divide the expense between Imperial votes and Indian funds. The Indian contribution, therefore, was in its inception the price paid for freeing Indian trade with China from the duties imposed on it by Parliament.

The division of cost arranged in 1834 was that the United Kingdom should pay two-thirds and the East India Company one-third. The one-third then amounted to about 7,633*l*. per annum. The whole administration was to be vested in the United Kingdom alone.

The Company, and subsequently the India Office, continued to pay one-third from 1834 until 1875-6, notwithstanding occasional objections to paying a fixed proportion of expenses over which India had no control, and subject to the withdrawal of certain charges for buildings, &c.

From 1876-7 to 1889-90 India paid a fixed contribution of 15,000*l*. per annum. Since then, under an arrangement made by an Inter-Departmental Conference at the Foreign Office on 26th March 1890, she has been paying 12,500*l*. per annum, and she is pledged to continue this payment until 1899-1900 inclusive.

The grounds on which the Government of India has insisted on a reduction of the contribution from one third, which may be roughly put at 20,000*l*. per annum, to 12,500*l*., and wished to reduce it to 10,000*l*., are mainly the following:—

(*a*.) Because India has no voice in the expenditure.

(*b*.) Because British colonies interested in the Chin trade make no contribution.

(*c*.) Because the United Kingdom would maintain the diplomatic and consular establishments in China whether India contributed or not, and India therefore ought only to pay for extra expenses incurred on her account solely.

The Treasury recognises the force of the first of these objections so far as to agree that the Indian contribution ought to be fixed for a period of years instead of fluctuating with the demands of each year. It cannot acknowledge the validity of the second objection, because no British colony has an interest in the China trade equal to that of India, nor does the same historical ground exist for claiming a contribution from any colony. In theory, no doubt, every part of the British empire that deals with China ought to contribute; but theoretical completeness in the distribution of charge is impracticable, and its absence is no justification for the repudiation by India of a liability which can be shown to be equitable on independent grounds. As regards the third objection, it strikes at the root of all voluntary financial co-operation between the different portions of the empire. Such a plea might be admitted on behalf of a small and poor dependency, but is unworthy of India.

The Treasury maintains that the equitable way of measuring the proper charge on India is by comparing her trade with China with that of the rest of the empire with China. No other method, moreover, accords with the spirit of the Act of 1833 already referred to. On the trade basis it is impossible to put India's share at less than 25 per cent. Putting the divisible charge at about 60,000*l*. per annum, this proportion would give a charge of 15,000*l*. per annum against India, and the Treasury has been contending for that contribution.

(3.)—*Jeddah Consulate.*

The Government of India agreed to a division of the charge for this Consulate on the Arabian coast of the Red Sea in 1874, and again in 1878, when the trading consulate was turned into a salaried one, on the ground of her great interest in it. Until 1883 India paid half the actual cost and received half the fees; but her net

share of cost was commuted for a periodically revised payment in 1884 (10366/84). The contribution is fixed triennially on the basis of the actual expenses of the preceding three years. India declines to pay any share of certain expenses, such as outfit, travelling, and pay of absent officers; but she is ready to pay half of other current expenses, and of pensions.

	£	
For the three years 1883–4 to 1885–6 the contribution was	475	per annum.
For 1886–7 to 1888–9 it was	500	,,
For 1889–90 to 1891–2 it was	410	,,
For 1892–3 to 1894–5 it was	458	,,

The contribution for 1895–6 and succeeding years has still to be fixed (5477/93). India's interest arises from the passage of Indian pilgrims through Jeddah to Mecca.

Fixed at 426*l.* per annum for three years to 31st March 1898 (5387/96).

(4.)—*Chiengmai Consulate.*

This Consulate was originally created in 1883 (21328/83) for the protection of the interests of British Indians in Northern Siam. It used to be wholly maintained from Indian funds, but in 1891 it was transferred to the Consular Estimates, for the sake of convenience in accounting for fees, in order to give a freer hand to the Secretary of State for Foreign Affairs in the appointment of officers, and to prevent difficulties in the assignment of their pensions. The condition, however, annexed to the transfer was that India should continue to bear the charge, by making an adequate annual contribution, to be fixed periodically.

The amount of the contribution agreed upon for the five years from 1st April 1891 was Rs. 15,020 per annum (6992/91). But the cost of the Consulate has been increased since that date, and India declines to pay for the second student interpreter kept at Bangkok mainly for Chiengmai business.

The contribution was arrived at thus:—

	Rs.
Average yearly cost to India in the four years 1884–5 to 1887–8, less buildings, furniture, and elephants	12,022
Add:—	
8 per cent. on buildings and furniture (Rs. 12,548)	1,004
4 per cent. on elephants (Rs. 5,690)	228
20 per cent. on salary (Rs. 7,200) and value of house (Rs. 1,200)	1,680
On account of outfit allowance	480
	15,414
Less fees, say	394
	Rs. 15,020

(5.)—*Royal Navy in Indian Waters.*

Until 1862, the naval defence of Indian commerce in Indian waters was carried out primarily by an Indian sea-going fleet, costing India at least Rs. 3,000,000 a year.

In 1862, when every effort was being made to recover from the effects of the Indian Mutiny, by economy, that fleet was abolished, and the protection of Indian commerce was undertaken by the Royal Navy, without any demand from India for a contribution until 1869. The contribution then agreed upon was 70,000*l.* per annum, being 70*l.* per annum for the wages and victualling of an assumed force of 1,000 men required for six vessels. India was also to pay the shore expenses of the men when employed under Indian requisition, to give the free use of Bombay dockyard, and to repair and coal the three ships exclusively employed in the Persian Gulf.

This arrangement continued until 1887–8, when it was determined, on the recommendation of a committee in 1887, to reduce the squadron to four vessels, with a complement of 550 men, of which vessels one was to be always in the Persian Gulf. The contribution then payable by India for 1889–90 and 1890–91 was:—

	£
70*l.* per head on 550 men	38,500
5 per cent. on first cost of the "Sphinx," employed in Persian Gulf	3,100
	£41,600 per annum.

The Treasury, however, objected to this contribution on the following grounds, viz. (3741–90):—

(1.) That the aggregate crews of the four ships were under-estimated.

(2.) That 70*l.* per annum a head no longer represented the cost of wages and victuals.

(3.) That the charge for pay and victualling did not represent so large a proportion of the whole cost as it did in 1869, because the cost of constructing, arming, and equipping a ship had so largely increased.

(4.) That it was unreasonable to charge India with a per-centage of the original cost of the single vessel in the Persian Gulf, and nothing of the kind for the other vessels of the squadron.

(5.) That to split charges for these vessels on the ground of divided interests or occasional absences appeared to be inconsistent with the fact that India was not called upon to contribute anything towards the cost of protecting her trade outside Indian waters.

At an Inter-Departmental Conference at the Foreign Office, on 26th March 1890, it was agreed that the Indian Government was to be consulted as to the number and class of ships required in the Persian Gulf and off the coasts of India "*for Indian purposes.*" When that number had been settled by the British and Indian Governments jointly, it would be arranged that the ships are not to be employed beyond certain limits to be agreed upon, except with the consent of the Indian Government. They would be under the control and orders of the Naval Commander-in-Chief, to whom would be sent the wishes of the Indian Government with which it will be his duty to comply, and India was to pay the whole cost, effective and non effective, of them.

A serious difference of opinion arose between the India Office, on the one hand, and the Treasury and Admiralty on the other, as to the meaning of the above term, "Indian purposes." If, as the India Office contended, these purposes were only the maritime police of the coast, and the repression of piracy and of the local slave trade, a smaller class and number of ships would be requisite than if, as maintained by the Treasury and Admiralty, the purposes extended to the defence of Indian commerce on the high seas.

The controversy on this subject lasted for some four years, during which India paid a naval subsidy on account of 50,000*l.* per annum. At last the question was submitted for the arbitration of the Earl of Rosebery, who gave the following award on the 19th February 1895:—

(1.) That the old Indian Navy did perform or co-operate in the performance of duties more extensive than are now admitted under the expression "Indian purposes" as limited in the India Office case.

(2.) That the expression cannot be limited to merely maritime police and the repression of piracy, but must be held to include some portion, at any rate, of the duties devolving on the Royal Navy for the defence of India and the protection of trade in Indian waters.

(3.) That the transaction of 1862 represented at most a temporary waiver of the claims of the Imperial Government to a contribution from India in respect of the performance of those duties.

(4.) That in any case nothing then said or done could affect the right of the Imperial Government to raise such a claim on its merits at any subsequent period.

(5.) That the basis on which such a contribution should be calculated does not admit of a permanent definition, but should be settled between the Home and Indian Governments from time to time at fixed intervals of, say, 10 years. (3854/95.)

In accordance with this award it has been agreed between the Home and Indian Governments that India shall pay, in addition to direct local expenses of the squadron, estimated at 4,000*l.* per annum, a contribution of 117,000*l.* (17,000*l.* being a token payment in respect of 200,000*l.* arrears for 1891–92 to 1894–95) for 1895–96, and of 100,000*l.* for each of the five following years, 1896–97 to 1900–1. (10008/95.)

The total cost of the four vessels composing the British squadron in Indian waters (including a yearly payment of 30,047*l.* to repay first cost, with 3 per cent. interest) is 121,736*l.* per annum, inclusive of the 4,000*l.* paid direct by India. Therefore India is now paying about 85 per cent. of the cost.

The four vessels in question are the—

	Tons.		£		Guns.
"Marathon,"	of 2,950,	costing	48,084	per annum	—6
"Brisk,"	,, 1,770,	,,	35,993	,	—6
"Pigeon,"	,, 755,	,,	16,651	,,	—6
"Sphinx,"	,, 1,130,	,,	21,108	,,	—5
	6,605		121,736		

In calculating the yearly payments for first cost, the hulls of these vessels are assumed to last from 18 to 21 years, the boilers for 12 years, and the armaments for 10 years.

It should be added, however, that the adhesion of the Indian Government to this arrangement was given with the reservation that the matter should not be regarded as finally closed until any recommendation on the subject that may be made by the Royal Commission on Indian Finance has been considered.

In the view of the Treasury the difference between actual cost and India's payment, and the relinquishment of 183,000*l.* arrears, amply compensate her for the occasional loss of the services of these ships, and for their being somewhat more powerful than she thinks necessary.

(6.)—*Floating Defences of Indian Harbours.*

These consist of 2 turret ships, 2 torpedo gunboats, and 3 torpedo boats, at Bombay, 2 torpedo boats at Karachi, 1 at the Hooghly, and 1 at Rangoon. But only 1 turret ship, 1 torpedo gunboat, and 3 torpedo boats are always kept in Commission and completely manned.

The cost of constructing these defences was defrayed by the Indian Government.

In return for a yearly contribution by India of 60,000*l.*, the Admiralty undertakes, under an arrangement based on the recommendations of a committee of 1888, to supply the officers and crews of these defences, and pay all ordinary expenses of maintenance, including pensions. But extensive alterations, such as re-boilering and changes of armaments, must be paid for by India. The cost of the slips or of any arrangement required for hauling up the torpedo boats is borne by India; and no charge is made by India for docking, or hauling upon slips, except where actual outlay is incurred.

The vessels will, as a rule, be kept in the ports to which they are allotted; but in times of emergency, with the leave of the Viceroy in Council, they might be employed elsewhere.

If the vessels in reserve are commissioned, the Indian contribution will be increased thus:—

For a turret ship, at the rate of 13,000*l.* per annum.
For a torpedo gunboat, at the rate of 8,000*l.* per annum.
For three torpedo boats, at the rate of 2,300*l.* per annum each.
For a seventh torpedo boat, at the rate of 1,700*l.* per annum.

(7.)—*Indian Troop Ships.*

The actual cost of chartering vessels for the conveyance of troops to and from India is now repaid by the Indian Government to the Admiralty. India also contributed, until 1895, 3,870*l.* per annum towards the effective, and 430*l.* per annum towards the non-effective, cost of the Transport Department of the Admiralty, under an arrangement made in 1879. (19,276/79.) The estimates for 1895–6 show that one Indian troopship still remains, for which India will pay 13,822*l.*, but this ship will not be replaced. The substitution of transports for troopships adds to the work and cost of the Department; and it became necessary to revise the Indian contribution. The total contribution is now 4,570*l.* per annum out of a gross mean cost of 8,196*l.* (17,988/95.)

(8.)—*British Indian Mail Service.*

Under an agreement which will expire in 1898, India contributes 60,600*l.* per annum towards a Mail Service between Brindisi, Aden, Bombay, China, &c., the gross cost of which is 265,000*l.* per annum. India also pays 1*d.* per letter for the Continental transit on the homeward mail.

(9.)—*Zanzibar-Mauritius Telegraph Subsidy.*

India contributes 10,000*l.* per annum towards a subsidy of 28,000*l.* per annum, payable for 20 years under an agreement, dated 29th March 1893, between the Treasury and the Eastern and South African Telegraph Company, for a telegraph cable from Zanzibar to Seychelles, which contributes 1,000*l.*, and thence to Mauritius, which contributes 7,000*l.* per annum.

The subsidy is only payable so long as the line is open and working.

(10.)—*Yarmouth Hospital.*

Since the abolition of the separate Indian Lunatic Asylum at Ealing in 1891–2, Anglo-Indian official lunatics have been maintained in the Naval Lunatic Asylum at Great Yarmouth. The charge made for these patients is based on actual cost, and subject to periodical revision. It is now 120*l.* a year for a first-class patient or officer, and 73*l.* a year for a second-class patient or man. The estimate for 1895–6 is—

	£	
	2,520 for 21 officers.	(2401/95.)
	2,482 ,, 34 men.	
Total	5,002	

(11.)—*Kew Gardens.*

Certain botanical collections were transferred from the Indian Museum to Kew in 1880, on condition that India should contribute 200*l.* a year for their maintenance. The expenditure of this contribution is accounted for to the India Office by the Director of the Gardens. (18,311/80.) Since 1883 India has also paid the salary (not pension) of a junior assistant engaged at Kew on work for Indian botanical establishments, at the rate of 90*l.*, rising yearly by 5*l.* to 120*l.*, and then by 10*l.* to 200*l.* a year.

(12.)—*Red Sea and Indian Telegraph.*

Under the Act 25 & 26 Vict. c. 39, an annuity of 36,000*l.* (with 54*l.* per annum for management) is payable, from 1862 to 1908, to the shareholders of the late Red Sea and India Telegraph Company, in commutation of the guarantee of interest at 4½ per cent. per annum, on the paid up capital of that Company. One half of this annuity and management charge, viz., 18,027*l.* per annum, is payable by India.

(13.)—*Karun Subsidy.*

India has joined the United Kingdom in paying, each alike, 1,000*l.* per annum to the Euphrates and Tigris Steam Navigation Company, in aid of a steamship service on the Karun River in the south-west of Persia (5163/95) for five years from 1st January 1895.

One of the questions referred to the Indian Finance Commission [*see* (15) *below*] is whether, if this arrangement continues, Great Britain ought not to pay half the subsidy of Rs. 24,000 a year paid out by India for a Mail Service on the Tigris. The Postmaster-General, however, says that this service is not of sufficient value to the United Kingdom to warrant any subsidy.

(14.)—*Mekong Commission.*

It has been arranged that the expenses of this Commission shall be equally divided between British and Indian funds, as was done in the case of the Opium Commission.

(15.)—*Royal Commission on Military and Civil Expenditure of India.*

The cost of this Commission of Inquiry is to be equally divided between British and Indian funds. Expenses in this country will be advanced by the Treasury, and governed by Treasury regulations; those incurred in India will be advanced from Indian funds, and be governed by Indian regulations. (8356/95.)

Treasury, 22nd October 1895. G. L. R.

APPENDIX No. 50.

Military Charges recoverable from India.

(Handed in by Mr. G. L. Ryder, C.B.)

I.—Effective Charges paid in England of Her Majesty's Troops serving in India.

From 1824 until the substitution of the Secretary of State for India in Council for the East India Company in 1858, and indeed until 1860–1 inclusive, the actual expenses incurred were recovered annually from India by the Treasury, with the exception of the extraordinary charges entailed by the Mutiny.

Very soon after the change of administration above mentioned, the idea of charging a capitation rate instead of actual expenses was started. Sir A. Tulloch's Committee of 1861, on the basis of previous ordinary charges, recommended 11*l.* 1*s.* 6*d.* per annum for each infantry soldier, 15*l.* 16*s.* per annum for each cavalry soldier, and 23*l.* 13*s.* per annum for each artilleryman sent out in the year. But a common rate of 10*l.* per annum for all soldiers on the establishment was agreed upon instead, and actually paid by India from 1861-2 to 1869-70, both inclusive. The word "soldiers" includes "officers" of all ranks.

The rate of 10*l.* per man on the effective list in India included all expenses on account of regiments and recruits in India, and for maintaining them until arrival there and after embarkation from India, except transport, passage money (including messing), clothing, arms, accoutrements, or other stores, and any expenses chargeable to India for the instruction of officers of the Royal Artillery, Royal Engineers, or Medical Service.

The actual payments by India at the 10*l.* rate were:—

	£		£
1861–2	584,380	1866–7	619,170
1862–3	695,860	1867–8	568,310
1863–4	687,450	1868–9	584,310
1864–5	693,180	1869–70	597,140
1865–6	651,400		

India, however, in 1870, disputed the fairness of the 10*l.* rate, and, pending a revised agreement, declined to pay more than certain sums "on account" for several years following, viz.:—

	£		£
1879–1	505,000	1875–6	380,000
1871–2	435,000	1876–7	320,000
1872–3	450,000	1877–8	500,000
1873–4	400,000	1878–9	530,000

By the Treasury Minute of 2nd July 1878 (11123/78), confirmed by 45 & 46 Vict. c. 79, it was agreed that the above payments "on account" should be accepted in full discharge of India's liabilities for the year's mentioned, except those in respect of the cost of stores, arms, accoutrements, clothing, and the charges for officers and non-commissioned officers of the Royal Engineers. This involved a remission of about 400,000*l.*

The same Minute proposed that a Commission should be appointed jointly by the India Office, War Office, and Treasury, to fix the capitation rate to be paid per man in future, and the basis on which numbers should be arrived at and that the rate so fixed should be in force for a certain number of years and then be subject to revision. Lord Northbrook was appointed chairman of this Commission by Treasury Minute of 19th February 1879 (1273/79).

On the 29th July 1879, the Commission recommended that no capitation rate should be fixed pending the publication of the Reports of the Royal Commission on Army Organisation, and of the Indian Commission on Military Charges, and that meanwhile all payments by India should be "on account" (13137/79).

By a Minute of 5th July 1880 (14065/80), the Commission were invited to consider what temporary arrangements should govern the payments by India for two or three years from 1st April 1879; and on 4th October 1880 (17407/80) they reported that 500,000*l.* might properly be accepted from India in discharge of all claims for 1879–80, including deferred pay and educational establishments.

On 9th July 1882 (11890/82), the Commission recommended similar payments by India of 520,000*l.* for 1880–1, and 487,000*l.* for 1881–2.

On 28th December 1885 (1905/86), the Commission recommended that the sums payable by India for the home effective charges of the British troops serving in India, excluding deferred pay, should be—

	£
For 1882–3	416,971
,, 1833–4	416,628
,, 1884–5	421,000

After an interval of two years and a half, the Treasury, on 17th July 1888 (10705/88), asked the Commission to resume their inquiry; and on a recommendation contained in a Report of 13th August 1888 (13529/88), the claims in respect of deferred pay, for the three years to 31st March 1885, were compounded for a sum of 362,205*l.*

On 22nd July 1889 (13876/89), the Commission recommended that the payments by India, including deferred pay, should be—

	£
For 1885–6	750,330
,, 1886–7	627,537

The Treasury again asked the Commission to continue its labours on 11th June 1891 (5958/91), and on 22nd March 1892 (5068/92) they made their last report, recommending that the claims, including deferred pay, for the undermentioned years should be settled as follows:—

	£
For 1887–8	665,936
,, 1888–9	719,948
,, 1889–90	734,201

and that a capitation rate, based on the number of men borne on the Establishments of the British forces in India, of 7*l.* 10*s.* per annum per man should be accepted for the two years 1890–1 and 1891–2; such rate, however, not to include deferred pay, which would be determined from actual returns as theretofore.

By this means the result originally contemplated in the Treasury Minute of 2nd July 1878 was accomplished.

All the recommendations of Lord Northbrook's Commission were accepted by the Treasury, the War Department, and the India Office.

Since then the capitation rate of 7*l.* 10*s.* per man has been renewed for the years 1892–3, 1893–4, 1894–5, and 1895–6 (1517/96).

The Indian Establishment, as shown in the Army Estimates for 1895–6, is 73,125, on which a charge of 7*l.* 10*s.* a head for all ranks and arms is 548,437*l.* 10*s.*, exclusive of deferred pay. In order to show what charges this capitation rate is in commutation of, the following particulars of the accepted claim for 1889–90 are annexed.

1. Capitation on Troops embarked for India—

	Numbers embarked.	Capitation Rate.	Amount.	
		£ s. d.	£	£
Royal Horse Artillery } 9 months' training	467	39 17 8	18,625	
Field Artillery } 9 months' training	1,094	37 16 1	41,357	
Garrison ,, 6 ,, ,,	570	25 12 6	14,606	
Cavalry 9 ,, ,,	994	37 14 6	37,499	
Infantry 6 ,, ,,	8,957	21 5 2	190,410	
Engineers—				
2nd Corporals, 2 years' training	26	110 0 0	2,860	
Corps of Armourers, 1 year's training	14	49 9 2	692	
	12,122			306.049

		£	£
	Brought forward		
2.	Charges for Staff for Depôts for training recruits, &c.:—	£	306,049
	Cavalry (whole cost of nine depôts at Canterbury)	32,912	
	Royal Horse Artillery (two batteries at reduced establishment)	19,387	
	Field Artillery (four ,, ,, ,,)	44,095	
	Garrison ,, (one-sixth of 11 depôts + militia staff)	14,082	
	Infantry (one-fifth of 53 depôts + militia staff)	106,381	
	Riding Establishment (five-twelfths of cost)	3,858	
			220,715
3.	Agency (now ceased)		3,020
4.	Charge for men deserted, died, or were discharged with less than one year's service		8,650
5.	Maintenance of young officers of Cavalry, Artillery, and Infantry on first appointment to regiments serving in India before embarkation (from two to five months)		4,769
6.	Maintenance of young Officers of Royal Engineers for India while under instruction (two years and two months on an average)		5,462
7.	Cost of training Veterinary Surgeons for India (six months)		600
8.	Cost of Examination of Candidates for Indian Medical Service		481
9.	Educational Establishments—		
	Royal Military College — 11,228 (1/2 of cost)		
	Royal Military Academy — 7,582 (7/19 ,,)		
	Staff College — 2,821 (1/5 ,,)		
	Army Medical School — 4,515 (8/13 ,,)		
	School of Gunnery — 5,422 (1/3 ,,)		
	School of Engineering — 2,319 (31/322 ,,)		
	Artillery College — 3,178 (1/3 ,,)		
	The net cost of each establishment is apportioned according to the numbers of Officers on the Indian and Home establishments.		37,065
10.	Advance of 25 days' pay to men embarked as drafts for India (for voyage)		11,563
11.	Expenses of men awaiting discharge (including period of passage home)		33,259
12.	Share of cost of Staff, &c., of Hospitals and Discharge Depôts and expenses of invalids (calculated on actual numbers received)		45,441
			677,074
13.	*Deduct*—	£	
	(*a.*) For men embarked with service short of the training period	1,937	
	(*b.*) For men embarked with more than six and nine months' service (War Office hold this to be an unfair deduction)	47,322	
	(*c.*) For men transferred from Cavalry, Horse, and Field Artillery Depôts to Home regiments and batteries	15,315	
	(*d.*) For men returned for further service with Colours or Reserve (including invalids who recovered)	91,491	
			156,065
	Total charge included in the future capitation rate of 7*l.* 10*s.* a man		521,009
14.	*Add*—		
	Deferred pay at 3*l.* a year	215,645	
	Less amount paid by the Indian Government for the British Service of men discharged in India	2,453	
			213,192
	Total charge for 1889-90		£734,201

The above statement does not include transport, which is paid by India separately.

It will be obvious that the justice of the continuance of the capitation rate of 7*l.* 10*s.* per annum depends, *inter alia*, on the strength of the Indian Establishment remaining about the same, and on the numbers embarked for and returned from India in the year not materially varying.

No doubt a strong argument against charging India with full cost in this case may be founded on the fact that the cost is enhanced by short service and other arrangements made for the benefit of the United Kingdom, not of India, and on the advantage derived by the former from the maintenance of a large force of British troops in India. Pleas of this kind, however, can be found on the other side. India gets the benefit of many British services for which no charge is made to her at all, and has the whole British army in reserve in case of need.

The charge for deferred pay is sometimes said to represent the saving in pension charge which will accrue to India through the operation of the short service system; but in the view of the War Office it is an increase of pay which was inevitable independently of the question of pension.

II.—Non-effective Charges of British Ships serving in India.

The Act 53 Geo. 3. c. 155 fixed the maximum number of Royal troops in India, chargeable on India revenues, at 20,000, unless the Court of Directors asked for more.

The Act 4 Geo. 4. c. 71 enacted that the sum to be paid by India for the non-effective charges of these troops was to be 60,000*l.* a year, or 3*l.* a head on the maximum force, and this rate of payment was made from 1823 until after the Indian mutiny of 1857, viz., until 1860-1, inclusive.

From 1861 until 1867, under the Acts 24 & 25 Vict. c. 89 and 25 & 26 Vict. c. 27, the rate of payment by India was 3*l.* 10*s.* per annum for each effective soldier and officer of all arms and ranks in India belonging to the British Army. The same rate was continued, for the three years to 31st March 1870, without legislative sanction.

From 1870-1 to 1883-4 inclusive the practice was to ascertain the amount of pensions granted in each year, and to make an actuarial calculation of the capital value of the proportion of each pension that was due to service in India, reckoning the value of money at 4 per cent. The capital sum so arrived at was paid by India to the War Department, and transferred to the Exchequer or brought in aid of Army votes. India was thereby relieved from all further claims on account of such pensions, and was entitled to receive credit for any officers or soldiers subsequently brought on to the effective list, and for any widows who re-marry.

Under this system India paid very much more than 3*l.* 10*s.* a head per annum on the average number of British troops in India, as the following figures show:—

Payments at Capitation Rate of 3*l.* 10*s.* a Man.		Payments on Actuaries' Report of Capital Value of Pensions granted.	
	£		£
1861-2	204,533	1870-1	428,725
1862-3	243,551	1871-2	281,148
1863-4	240,607	1872-3	318,500
1864-5	242,595	1873-4	348,330
1865-6	227,990	1874-5	428,841
1866-7	216,709	1875-6	420,000
1867-8	198,908	1876-7	468,330
1868-9	204,508	1877-8	748,841
1869-70	208,999	1878-9	550,000

During these years there was no very material alteration in Establishment.

In 1885 the Treasury became aware that the Exchequer was seriously losing by this arrangement with India, and the Act 48 & 49 Vict. c. 67 was passed in consequence.

The faults of the system were stated as follows in the Treasury Minute of 1st November 1885:—

"*a.* The capitalisation of the pensions involved actuarial calculations which it took many months to make. The delay, of course, meant loss to the Exchequer.

"*b.* The rate of interest taken was too high. The Imperial Government, though it accepted, in 1871, four per cent. as the rate of interest, because India averred that she could not obtain the money for less than four per cent., cannot, as is well known, invest at that rate; accordingly further loss ensued.

"*c.* The arrangement had made no provision for pensions granted previously to 1870–1, which became consequently a charge on the British Exchequer.

"*d.* The capitalised sums were, when paid, treated as Revenue, and the Imperial Exchequer accordingly received more than the War Office actually expended in the year on Indian pensions, in respect of which it had been paid a sum down. By this mistaken method of proceeding, the finances of one year benefitted at the expense of the finances of future years. Thus, if India paid the Imperial Government a sum of 100*l.* in 1880–1, representing the capitalised pension of a particular soldier, this sum was at once paid into the Exchequer as revenue, and consequently in subsequent years the Indian liability for that soldier's pension in each succeeding year fell upon the Army Votes of that year without any corresponding receipt for the Exchequer.

"In consequence of these defects and mistakes a heavy liability accrued against the Consolidated Fund, a liability which was estimated 18 months ago at not much less than four millions and a quarter."

The remedy sanctioned by the Act of 1885 was:—

"1. To terminate the system of capitalisation after the 31st March 1884, and to require India to contribute to Army Funds every year her share of the charge for pensions granted since that date.

"2. To provide a special Deficiency Fund, which would gradually liquidate the Consolidated Fund Liability. This Deficiency Fund would consist:—

"(*a.*) Of the arrears of capitalisation up to 31st March 1884, which have been set aside since 1881–2.

"(*b.*) Of the sums received from India since 31st March 1884, in excess of the actual charge of Indian pensions on Army Votes and added to the asset in the hands of the Paymaster-General.

"(*c.*) Of further arrears of capitalisation which India will have to pay.

"(*d.*) Of an annuity of 150,000*l.* charged on the Consolidated Fund for 57 years.

"3. To entrust the management of the Deficiency Fund to the National Debt Commissioners, who were to pay annually to the War Office whatever sum represented the charge on Army Funds for the pensions formerly capitalised and to invest surplus funds."

The Deficiency Fund was calculated to satisfy all the requirements of the War Department in respect of pensions granted previous to 31st March 1884; but it has become necessary to increase it by over 60,000*l.* a year.

As regards pensions granted since that date, the arrangement is that, when the proper Indian share of the annual payment to each pensioner, on the basis of past service, has been ascertained, the charge against India (settled once for all at the time of retirement) shall be "*the original Indian share multiplied by the "chance of the pensioners being alive in the year*," according to a fair rate of mortality. The meaning of this is that India pays her share of each man's pension for as long as it is, actuarily, probable that the man is alive, so as to save the trouble of ascertaining whether he is alive or not. India's actual payment for 1894–5 was 430,674*l.*

The actual receipts by the War Office for non-effective services of troops in India (including half pay) were, in 1893–4, 809,693*l.*, and in 1894–5, 807,737*l.*; but nearly half of these sums came from the National Debt Commissioners. The contribution, however, from those Commissioners sinks, as that from India rises.

The total pension of a soldier, whether he retires directly from Indian or British service, appears to be divided between British and Indian Funds, according to the number of years' service in and out of India respectively, without reference to rank held whilst in that service.

It is alleged that the non-effective charge against India is unfairly enhanced by such measures as the abolition of purchase, &c., in the adoption of which India has no voice. But if it pays India better to employ the British army than to have an European army of her own, she must take the former as she finds it.

III.—Indian In-pensioners in Chelsea and Kilmainham Hospitals.

Under the Acts 2 Will. 4. c. 53 and 29 & 30 Vict. c. 37, forfeited and unclaimed prize money of the British army, whether at home or serving in India, is applicable to the service of Chelsea Hospital.

The India Office, in 1881, claimed that the prize money of this kind appertaining to British troops serving in India ought to be surrendered to the Indian Government, which paid the pensions of such troops, and asked that the Chelsea Hospital Commissioners should refund all such prize money as they had received since 1861. The amount was then estimated at about 50,000*l.*, but is now put at 43,000*l.*

The War Office met this claim by a counter-claim to the Indian share of the difference between the cost of an in-pensioner of Chelsea or Kilmainham Hospitals, and his suspended out-pension, so far as regards pensioners who had served in India, where they had not improbably contracted the illness which drove them into hospital. This claim was at the time estimated at about 1,000*l.* per annum, but it has since grown, as ex-Indian in-pensioners increased, to about 5,000*l.* a year.

No payment has yet been made on either side, and the Comptroller and Auditor-General has recently drawn attention to the matter.

The India Office contend that before the charge for the in-pension establishments can be equitably divided between the two Governments, it ought to be determined what diminution of the annual expense of the two hospitals would have resulted if the British Government had not (prior to 1st May 1861) appropriated nearly 600,000*l.* of unclaimed prize money to the reduction of Army Estimates, instead of applying it to the hospitals.

No part, however, of the above 600,000*l.* belonged to India; and if the whole of it had been used as an endowment of the hospitals, the interest might have been employed in increasing the comforts and numbers of the in-pensioners, not in reducing the yearly charge on Army Votes.

It has been determined by the War Department and Treasury to refer the claim and counter-claim to the Royal Commission on Indian Expenditure (18960/84 and 4403/95).

G. L. R.

20th February 1896.

APPENDIX No. 51.

INDIAN HOME CHARGES (EFFECTIVE SERVICES).

(Paper handed in by Sir Ralph Knox, K.C.B.)

The actual cost to the British Exchequer of raising and training the force necessary to maintain the Army in India is clearly the cost of raising, paying, and maintaining the force existing in this country, which would not be maintained if the Indian Army had not to be kept up.

At the very minimum this consists of 200 private soldiers in each of 50 infantry battalions, and 400 in three others, viz., those intended to effect the annual reliefs; on the other hand, an allowance must be made for a decrease during that part of the year when the drafts are being despatched, and the numbers fall below establishment.

In addition to these there is one-fifth of the cadres of 53 depôts, the whole of the cavalry depôts, the two depôt batteries of horse artillery, four depôt batteries

of field artillery, and five batteries of garrison artillery (including one mountain battery). The total of these numbers amounts to a little more than 16,000 officers and men, or about one-seventh of the home force. (Sub-Appendix I.)

In connection with these are the staff and departmental charges as well as the charges for administration.

With the exception of the Ordnance Store Department, whose heaviest work arises from the supply of armaments to the navy and land fortifications, the time of the officers of the staff and departments is largely occupied in dealing with the raising and training of the younger soldiers, their inspection and embarkation, and it is evident that these 16,000 men should bear a share of their cost. Besides these there is a part of the cost of the educational establishments and the hospitals for Indian invalids. On this basis the total cost of this force would amount to 1,081,000*l.*, as detailed in Sub-Appendix I.

When it is borne in mind that all the difficulties in the organization of the Army during recent years, and the grants of additional inducements to men to join the Army, have been mainly due to the necessity of keeping a largely increased European force in India, it is difficult, in justice to the home taxpayer, to see on what grounds any modification can be made of this claim as the payment to be made by the Indian Government.

Arguments have been advanced, however, in support of a reduction, the chief one being that during their recruit training, and even more so after its completion, these men are of service to the Home Government, and, being on the spot, are, at all events, available in times of emergency.

The fact that, so long as they remain in this country they are available cannot be denied; but yet the Home Government does not rely on them, because, in the case of emergency, it is not these young soldiers who would be used; and, to avoid the necessity of their services the Home Government is paying nearly 500,000*l.* a year for the reserve. In fact, the Home Government rather regards the year's drafts as the first reserve for the Indian Army in the event of active operations, inasmuch as the despatch of the annual draft would at once increase the Indian force by 10,000 men, the short-service men due for discharge from the colours being at the same time retained in that country.

In assessing the charge against India for pensions, the service given at home, although it may be while the men are attached to the establishments maintained solely for Indian service, is charged for both officers and men to the Home Government, and it may fairly be advanced that, in accepting this charge for the pensions, the Home Government makes sufficient allowance for whatever advantage is derived from the presence of these young soldiers in this country.

Nevertheless, in deference to the arguments advanced, there has been every desire to treat the Indian Government with as much generosity as was defensible. Every consideration has been given to the various arguments advanced for making some reduction in the full cost, and for providing the force as economically as possible. With this object the system of short service has been introduced, a measure most beneficial to Indian revenues, and a mode of calculating the depôt charges proposed, which relieves the Indian Government of more than one-third of the actual cost incurred.

It has already been stated that the actual cost of the home charges amounts to 1,081,000*l.*, whereas the charge proposed to be made is only 605,000*l.*, or a reduction of 476,000*l.* (For details, *see* Sub-Appendix II.)

On referring to the charges made against the Indian Government for the supply of recruits in the times before the Indian Mutiny, and between that period and the introduction of short service, it will be found that the following claims were admitted:—

Period.	Amount per annum.	British Force in India.	Numbers embarked.
	£		
1834–57	170,000*	24,000 Cavalry and Infantry.	Not known.
1870–71	450,000*	63,000 Cavalry, Artillery, and Infantry.	9,216

* As readjusted for purposes of comparison with the normal claim.

The charge for the present force of 72,400 men, calculated at these rates, would amount to 510,000*l.* and 517,000*l.* respectively. Improved rates of pay account for a further increase of 20,000*l.*, making a total charge of 537,000*l.*, to compare with the claim now preferred of 605,000*l.*

It is calculated (*see* Sub-Appendix V.) that the number of men to be despatched to India yearly, excluding the cadres of old soldiers who are exchanged on the relief of a regiment or battery, is 11,583. This number is obtained on the hypothesis that no man sent out to India has given more than one year's service, a condition which reduces the number to a minimum, and is therefore very favourable to the Indian Government. If this number be assumed for the future, it gives an increase beyond the total of those embarked in 1870–1 (after making allowance for the augmented force) of about 10 per cent., which corresponds very closely with the increase in the proposed claim, and this notwithstanding the stringent conditions made in recent years for securing that only completely trained men of full age shall be despatched from home (*see* Sub-Appendices VI. and VII.).

The system of enlistment for short service was introduced for a threefold object:—

(1.) To meet the growing objection to lengthened service in the army.

(2.) To obtain the means of rapidly expanding the army by means of a thoroughly trained reserve.

(3.) To reduce the cost of the army by largely diminishing the charge for pensions.

It was obvious that short service would create an increased demand for recruits, the cost of whose training would give rise to a considerable expenditure. As affecting the Indian Government this would be due to:—

(1.) The increased number of recruits trained.

(2.) The increased number of men to be interchanged between home and India.

(3.) The grant of deferred pay.

Against this, however, there must be set the large saving in the charge for pensions.

Summing up these figures, and charging the full estimated amount for deferred pay, the financial effect, as regards India, of short service, both for the present and in the future, may be stated as follows:—

The payments to be made by India for the year 1889–90 under the long and short service compare thus—

	Under Long Service.	Under Short Service.
	£	£
1. Home charges, Sub-Appendix II.	537,000	605,000
2. Deferred pay	620,000	160,000
3. Pensions		452,000
Total	1,157,000	1,217,000
	Increase 60,000*l.*	

While in the future, when a normal condition is reached, the claims would be—

	Under Long Service.	Under Short Service.
	£	£
1. Home charges	537,000	605,000
2. Deferred pay } Appendix III.	971,667	211,000
3. Pensions }		302,233
Total	1,508,667	1,118,233
	Saving 390,434*l.*	

Furthermore the charge for sea transport, so far from growing, shows a large decrease since the year 1870–1. The charge for the year 1887–8 (*see* Sub-Appendix IV.) may be fairly taken to represent the normal, as the numbers that embarked in that year approximate

to those estimated by the actuaries to be required for the augmented force.

In the mode adopted for making a large reduction in the charge for depôts there may be some minor points which are debateable, due to the fact that it is built up artificially, but I submit that the result, which surrenders nearly 500,000*l.* to the Indian Exchequer, is so favourable to the Indian Government, that no force can be allowed to criticisms upon minute details, and that the Home Government cannot consent to any further diminution of the claim.

The proposal made would stand thus—

1. The Indian Government shall pay a contribution of 600,000*l.* a year, in quarterly instalments, on account of the home charges stated.
2. That for every man deficient in the establishment of the Army in India on 1st May in each year, a deduction of 50*l.* shall be made from the quarterly instalment next due.
3. That a direct charge be made against the Indian Government for deferred pay.

War Office, 26th April 1889. R. H. KNOX.

SUB-APPENDIX I.

ESTIMATED COST to BRITISH EXCHEQUER of MAINTENANCE of BRITISH TROOPS in INDIA (EFFECTIVE CHARGES).

1. Cost of depôts:—

	Numbers.			
	Officers.	Non-Commissioned Officers and Men.	Total.	Horses.
Cavalry	23	1,149	1,172	218
Royal Horse Artillery (including part of the riding establishment).	12	445	457	232
Field Artillery	28	1,504	1,532	400
Garrison Artillery	21	875	896	42
Infantry	106	11,921	12,027	—
Total	190	15,894	16,084	892

		£	£
Cavalry			89,377
Royal Horse Artillery (including armaments)			38,481
Field Artillery (including armaments)			106,036
Garrison Artillery (4 depôt batteries and 1 mountain battery)			56,399
Infantry:—			
(*a.*) One-fifth of cost of staff of 53 depôts		78,747	
(*b.*) Cost of additional men to 53 battalions:—			
	11,200 men at 43*l.* 15*s.* 2*d.* = 490,093*l.*		
Deduct for pay, rations, and deferred pay of men short of establishment	2,250 men at 32*l.* = 72,000*l.*		
	8,950	418,093	496,840
2. Pay, &c. of young officers of cavalry, artillery, and infantry before embarkation for India			7,500
3. Pay and allowances of young officers of Royal Engineers while under instruction at Chatham			5,400
4. Proportion of cost of educational establishments chargeable against India			40,100
5. Proportion of cost of staff of Netley and Woolwich Hospitals, and of Gosport and Woolwich Discharge Depôts			25,027
6. Advance of 25 days' pay to drafts proceeding to India			11,900
7. Pay of men on passage home who return as invalids, or for discharge or transfer to the Reserve			11,112
			888,172
8. Add for staff and departmental charges			*193,000
Total			1,081,172

* The total effective cost of the staff and departments for the force at home is as follows:—

	£
General staff	143,152
Army Pay Department	139,527
Veterinary	30,296
Commissariat and Transport staff and subordinates	349,714
Ordnance Store Department	45,000
Chaplains' Department	52,514
Military police	18,700
Prison establishments	16,000
Medical Department (including Medical Staff Corps)	377,572
War Office	264,800
Miscellaneous charges (such as stationery, postal and telegraph expenses, rents, furniture, &c.)	118,000
	1,555,275

The above gives an average of about 12*l.* a man, which, for 16,084 officers and men, amounts to 193,000*l.*

SUB-APPENDIX II.

ESTIMATED NORMAL CLAIM FOR HOME CHARGES.

1.—Capitation on troops embarked for India—

Garrison „	627	27 11 1	= 17,276		
Cavalry	840	40 17 1	= 34,317		
Infantry	8,750	23 3 3	= 202,672		
Engineers	16	100 (average)	= 1,600		
				311,277	
	11,583				
(*b.*) Cadres of regiments, &c., that embark for relief	812		say	4,000	
2. Cost of staff of depôts for training recruits	2,329			224,364	
					539,641
3. Charge for men who desert, &c.					14,000
4. Pay, &c., of young Officers of Cavalry, Artillery, and Infantry before embarkation					7,500
5. Pay and allowances of young Officers of Royal Engineers while under Instruction					5,400
6. Educational Establishments					40,100
7. Advance of 25 days' pay to drafts					11,900
8. Expenses of men awaiting discharge, and pay and travelling expenses of invalids					31,000
9. Proportion of cost of Staff of Hospitals and Discharge Depôts, and expenses of invalids except pay and travelling					32,200
10. Cost of training Veterinary Surgeons for India—estimated normal number, four at 150*l.*					600
11. Cost of examination of Candidates for Indian Medical Service					500
12. Cost of Medical Stores, &c., supplied to troopships and hired transports					950
Total					683,791

13. *Deduct* Rebate for men returning for further service with the Colours (including invalids who recover) or in the Reserve—

	Numbers.	Rates.			
		£ s. d.	£	£	£
Royal Horse Artillery	201	14 4 11	= 2,863		
Field Artillery	662	13 10 8	= 8,959		
Garrison Artillery	859	9 3 8	= 7,888		
Cavalry	564	13 12 4	= 7,679		
Infantry	6,598	7 14 5	= 50,941		
Engineers	6	40 0 0	= 240		
	8,890			78,570	
Total					605,221

N.B.—This statement is calculated on the basis that the average period of service to be given in India is seven years. The charge is, therefore, calculated on the lowest possible numbers. Taking the duration of Indian service at six years, which was the average period to be given by the drafts embarked in 1887-8 and 1888-9, the above claim, after allowing for a proportionately larger rebate, would be increased by about 20,000*l.*

SUB-APPENDIX III.

Actuaries' Report, No. 392.

NON-EFFECTIVE SAVING TO INDIA CONSEQUENT ON INTRODUCTION OF SHORT SERVICE IN 1871.

1. Before the introduction of Reserve Service in 1871, all men enlisted for long service, subject to a proportion quitting the Army on the expiration of their first term of service.

Allowing for this break of service, it was calculated in 1871 that for an army of the then strength (178,200) the normal annual charge for pensions would be 2,221,300*l.* In 1884 the strength had risen to 196,665, and various changes in rates of pension in favour of the pensioner had been made, bringing the normal charge for pensions to 2,573,100*l.* By the estimates of 1888-9, the total force was 211,414, which, by proportion, would have involved a pension list of 2,765,000*l.*; to which would have to be added about 150,000*l.* for temporary pensions of invalided soldiers, say 2,915,000*l.* in all. As the force in India is almost exactly a third of the whole, it may be taken that India's charge for soldiers' pensions would, if long service had continued, have ultimately reached 971,667*l.* a-year.

The introduction of short service arrested the progress towards that charge, and India paid its highest payment in 1878-9 — viz., 733,477*l.* The payments by India were at that time capitalizations, so that this sum had reference also to payments in later years; but the actual Indian payment for pensions rose from 181,091*l.* in 1870-1 to the highest point actually reached—viz., 504,719*l.* in 1882-3. At this point (1882-3) the effect of the great augmentation, for the Mutiny, of the Army in India was seriously felt; and the charge would have gone on steadily increasing till about 1902, when the maximum (for 60,000 men in India) of 834,700*l.* would have been reached. The effect of the later addition of upwards of 10,000 men to the force in India would have

culminated subsequently in the maximum of 971,667*l.* Since 1882-3, under the influence of short service, the charge against India has gradually fallen, and is estimated at 452,058*l.* for the year 1889-90.

With short service the Pension List is gradually decreasing towards a normal of 756,700*l.*, plus 150,000*l.* for temporary pensions to invalids, together 906,700*l.*; of which the Indian share would be 302,233*l.*, showing a normal saving to India on *Pensions* of 669,434*l.*, and to Britain 1,338,866*l.*

The institution of Deferred Pay, being pension in a modified form, may be regarded as some set-off to this saving. The normal amount should be for India 211,000*l.*, and 422,000*l.* for Britain.

A further set-off is Reserve Pay, which is also pension in another form, for which the Reserve of men is an equivalent. India has the benefit of the Reserve; but pays nothing towards it. The normal reserve may be taken as 55,352 men, costing Britain 495,000*l.* a year.

The general result (normal) of the substitution of short for long service becomes—

	Normal.			
	India.		Britain.	
	Saving.	Increase.	Saving.	Increase.
	£	£	£	£
Decreased charge for pensions.	669,434	—	1,338,866	—
Deferred Pay	—	211,000	—	422,000
Reserve Pay	—	—	—	495,000
Net result	458,434	—	421,866	—
Percentage of long service charge saved by introduction of short service (normal).	47·2		21·71	

War Office,
15th January, 1889.

SUB-APPENDIX V.

Actuaries' Report, No. 397.

INDIAN DRAFTS.

1. Taking the force in India as practically maintained by drafts of men who serve seven years in India and then pass to the Reserve, and of non-commissioned officers who return home for the auxiliary forces on completing 16 years' total service, and the numbers as—

Cavalry	5,418
Horse Artillery	1,732
Field Artillery	6,620
Garrison Artillery	3,886
Infantry	52,164
	69,827

we find from the table of Army waste recently calculated, that the number to be sent yearly to India will be—

Cavalry		840
Artillery—		
Horse	281	
Field	1,069	
Mountain	137	
Garrison	490	
		1,977
Infantry		8,750
		11,567

2. Of the men who thus proceed to India, the ultimate disposal would be as follows:—

Arm of the Service.	Die.	Desert.	Miscellaneous Losses.	Invalided Home.			Return Home.		
				Discharged as Invalids.	Die.	Rejoin Service at Home.	For Service.	For the Reserve.	For Discharge after 12 Years' Service.
Cavalry	73	4	80	67	4	72	31	461	48
Artillery—Horse	24	1	25	21	1	23	21	157	8

Sub-Appendix VI.

Copy of Circular Letter despatched annually to Commanding Officers, containing the Instructions to be observed in the selection of Drafts for India.

Sir, Horse Guards, War Office, S.W.

I have the honour, by direction of His Royal Highness the Commander-in-Chief, to request that you will be pleased to cause the detachment specified in the margin to be prepared by the

Officers.	Colour-serjeants.	Serjeants.	Corporals.	Drummers.	Privates.

and held in readiness for embarkation for India to join the proceeding, *viâ* the Suez Canal, H.M. troopship which will leave Portsmouth on the and Queenstown on the

The men to compose the draft are to be in every respect fit for service in India, must have completed their drill, including a recruit's course of musketry, and are to be taken in the following order:—

1. Men in the 2nd, 3rd, and 4th years of their service, if over 20 years of age.
2. Men in the 1st year of their service, if over 20 years of age, and with six months' service.
3. Men with more than four years' service, provided they have still five years to serve.

Only those men included in the above categories are permitted to embark.

Boys enlisted to fill vacancies in the foreign battalion should be included in the draft, provided they have over three months' service, are medically fit, and will be 15 years of age by the date of arrival of the draft in India.

The following may be exempted:—

Lance-corporals.
Servants and bâtmen.
Full bandsmen.
Pioneers, and six trained signallers.
Men invalided home, who have not been home one year.

The non-commissioned officers should be selected, as far as practicable, from those with over four years' service, having five years still to serve; and no men are to be promoted simply for the purpose of embarking, without special authority having first been obtained.

The General Officer Commanding

APPENDIX No. 52.

Chelsea and Kilmainham Hospitals.

Memorandum forwarded for submission to the Royal Commission with War Office Letter of the 26th July 1895.

The question to be referred to the Royal Commission is as follows, viz.:—

> What proportion (if any) of the cost to the public, in respect of Chelsea and Kilmainham Hospitals, should be paid by India?

This question has formed the subject of much correspondence between the War Office and the India Office. It is the contention of the War Office that Indian revenues ought to bear their full share of the expense incurred in respect of the purely in-pension services of Chelsea and Kilmainham Hospitals, such full share being calculated in the same ratio that the service in India bears to the total service of the in-pensioners maintained in the hospitals from time to time.

The total net charge provided for in Army Estimates in respect of the in-pension services of the two hospitals is as follows, viz.:—

	£
Chelsea Hospital - - -	22,967
Kilmainham Hospital - -	5,530
Total - - -	28,497

There is a further charge against the public on account of fuel, light, furniture, maintenance of buildings, &c., as follows, viz.:—

	£
Chelsea Hospital - - -	7,480
Kilmainham Hospital - -	4,395
Total - - -	11,875

but as this sum is provided in the Civil Service Estimates, it has been disregarded in the following calculations.

The total service rendered by the present in-pensioners of Chelsea Hospital amounts approximately to an aggregate of 9,740 years, of which 2,889 years were spent in India. Taking the cost of Chelsea Hospital as 22,967*l.*, the proportion of that amount payable by India in the ratio of 2,889 to 9,740, would be 6,812*l.* 5*s.* 8*d.*

Similarly, the total service of the in-pensioners of Kilmainham Hospital amounts to 2,459 years, of which 823 years were given in India. The Indian share of the cost of that institution calculated in the ratio of 823 to 2,459 on the full expense of 5,530*l.*, amounts to 1,850*l.* 16*s.* 5*d.*

The total of these two sums is 8,663*l.* 2*s.* 1*d.*, and the Secretary of State for War contends that Indian Revenues should contribute this amount towards the cost of the two hospitals.

At the present time the sum contributed by India in respect of in-pensioners who were pensioned on or after the 1st April 1870, is based upon the amount of the undrawn out-pensions held by the men at the time of their admission to the in-pension list, India paying the same proportion of the pensions that the men's Indian service bears towards their total service. In respect of men pensioned during the period from the 1st April 1861 to the 31st March 1870, the contribution paid by India was included in a capitation of 3*l.* 10*s.* a head on the effectives employed in India; and, as regards those pensioned before the 1st April 1861, a fixed annuity of 60,000*l.* was paid by India.

The value of the pensions which lapse on admission is, as a rule, materially less than the average cost of the pensioner's maintenance in the hospitals, and the amount contributed by India under the existing arrangement is thus very much less than would be payable if the course suggested by the War Office were adopted.

The present payments made by India are, approximately, as follows, viz.:—

	£	s.	d.
In respect of the undrawn pensions of inmates of Chelsea Hospital - - -	2,675	2	11
Do. Kilmainham Hospital -	713	5	5
Total - - -	3,388	8	4

	£	s.	d.
The difference between - -	8,663	2	1
and - - -	3,388	8	4
viz.: - - - -	5,274	13	9

represents the additional amount that would at the present time be payable by India under the proposed new arrangement.

The Secretary of State for India, however, demurs to making this additional payment, primarily upon the ground that, when the capitation system of payment of pensions to soldiers with Indian service came into operation in 1861, and again when the system was amended in 1870, the payment of an increased charge for in-pensioners formed no part of the arrangement between the two Governments. It was urged, moreover, by the India Office that the British Government had hitherto maintained these establishments at its own cost, and that it would in future do so, quite irrespective of whether a part of the Army is employed in India or not.

The India Office contended further that the Institution of Chelsea Hospital would have been self-supporting had not the British Government from time to time appropriated unclaimed prize money to the extent of nearly 600,000*l.* towards the relief of votes of Parliament for the payment of out-pensions.

In considering these contentions of the India Office it must be borne in mind that for some years after the introduction of the capitation system the Indian proportion of the cost of the in-pensioned establishments was represented by a merely nominal figure, in respect of which the War Office made no claim on the Indian Government. Gradually, however, the proportion of soldiers in the British Army who have given service in India has increased towards the nominal limit, and as a result the Indian share of the additional cost in respect of such of the men as have been admitted to in-pension has increased from an estimated average of 1,000*l.* a year for the 22 years from 1861 to 1883 to a sum of over 5,000*l.* a year, as before stated, at the present time. Thus, although the matter was not of great importance in 1870, it will be seen that it has now developed into one of considerable magnitude.

It must be pointed out that the India Office has, to a certain extent, recognised the justice of the War Office claim against Indian revenue, inasmuch as the

Secretary of State for India agreed in 1885 to make an additional payment of 1,000*l.* a year to the British Government towards the costs of the hospitals, as from the year 1861. This payment was, however, to be in the nature of a compromise, and was to be conditional upon the surrender to the Indian Government of the Indian share of the unclaimed army prize money held by the Commissioners of Chelsea Hospital. Such share was at the time believed to be about 50,000*l.*, but has since been more accurately stated at 43,817*l.* 9*s.* 11*d.*

The Treasury and the War Office were willing that the Indian share of the prize money should be thus surrendered, but only on the understanding that India should pay her full and increasing share of the cost of the hospitals. The India Office, however, declined to proceed with an arrangement which would thus have added considerably to the liabilities already incurred by her in respect of Army pensioners. Moreover, the Commissioners of Chelsea Hospital, who are empowered under Act 2 Will. IV. c. 53 (1832) to expend the prize money at their discretion for the general services and expenses of the hospital, demurred to the handing over to India of any portion of the prize fund; and, indeed, the proposed surrender could not have been carried into effect without fresh legislation for the purpose.

The compromise by means of which the India Office proposed to settle the matter in dispute, thus fell to the ground; and the question was not re-opened until the War Office found that the claim against India in respect of the increased cost of the in-pensioners was in excess of the interest derived from the Indian share of the prize money. No immediate action was, however, taken by the War Office, nor has any further claim yet been made on the Indian Government.

It may be remarked, with reference to the appropriation of prize money to the extent of 600,000*l.* by the British Government for the payment of out-pensions that such expenditure was specifically authorised or legalised by various Acts of Parliament. It is not considered that this point has any direct bearing on the question under consideration.

War Office,
26th July 1895.

APPENDIX No. 53.

Paper handed in by the Financial Secretary, India Office.

CHELSEA AND KILMAINHAM HOSPITALS.

REPLY to the WAR OFFICE MEMORANDUM of July 26, 1895.

The correspondence mentioned in the first paragraph of the Memorandum deals with two subjects:—

1. A claim by the India Office for a refund of all unclaimed prize-money paid to the Treasurer of Chelsea Hospital since the 1st of May, 1861, on account of booty captured in India by the Forces of Her Majesty.
2. A counter-claim by the War Office that India shall bear a share of the expense of the maintenance of the pensioners in Chelsea Hospital since the 1st of May, 1861, based on the proportion of the Indian to the British service of those pensioners.

In reply to the latter claim, it is urged, on the part of the India Office, that the grant of the in-pension is an act of grace by selection, not of right; and that in paying her share of the out-pension, India discharges her full liability.

That Chelsea Hospital was erected and maintained from the proceeds of a poundage deducted from the pay of every soldier up to 1847, and on officers' commissions, and from unclaimed prize-money and other effects of soldiers, and not by the funds of the British Government. The Hospital was built and opened in 1690, before the king's troops had ever been employed in India.

That if the British Government had not appropriated, in aid of its revenue from time to time, sums amounting to 642,382*l.*, Chelsea Hospital would be self-supporting.

That, therefore, the British Government can have no claim upon India to contribute towards the cost of the Hospital, until it replaces that sum, and credits the Hospital annually with the interest thereon.

The India Office has never recognised a right to make India pay for the proportionate share of the expense. What happened was, that, having at the beginning of January, 1881, preferred a claim on the War Office, which after nearly four years the War Office admitted, if India would agree to pay her share of Chelsea Hospital, estimated at "about 1,000*l.* a year," the India Office agreed to accept the condition. Seven months afterwards the War Office found their estimate to be inaccurate; and it is now shown to exceed 5,000*l.* a year. The India Office thereupon declined to proceed with the compromise.

The claim of the India Office to a refund of prize-money, stated in the present Memorandum to amount to 43,817*l.*, is founded on the following facts:—

Unclaimed shares of prize-money were granted to the authority upon whom devolved the duty of providing pensions for the troops to whom such prize had been awarded—shares of soldiers in the East India Company's service to the Clive Fund, of seamen in that service to the Poplar Hospital Fund, of the British Army to Chelsea Hospital, and of sailors in the Royal Navy to Greenwich Hospital.

Up to 1861 India only paid 60,000*l.* a year towards the non-effective charges of the British Army: but since the 1st of May, 1861, she has borne the full share of those charges due on account of service in India.

It is, therefore, claimed that lapsed shares of Indian prize-money since that date should be paid to the Government of India as the authority bearing the charge for pensions of the troops that earned such prize.

It is true that the law gives the money to Chelsea Hospital; but it is contended that equity demands an alteration of the law.

C. E. PALMER,
Examiner Marine Accounts.

APPENDIX No. 63.

Paper handed in by Sir Henry Waterfield, K.C.S.I., C.B., with reference to Q. 12,273.

CORRESPONDENCE connected with the AWARD of Viscount HALIFAX on the ADJUSTMENT of the CHARGES and RECEIPTS relating to the EAST INDIAN MAIL SERVICE.

No. 1.

India Office,
4th July 1874.

SIR,

WITH reference to the letter from this Office of the 26th ultimo, relative to your employment in connexion with the establishment of a Parcel Post and Money Order System between India and Germany, and other important questions, I am directed by the Secretary of State for India in Council to forward herewith copy of correspondence* between this Office and the General Post Office in London, relative to the adjustment of the accounts of the Indian Mail Service, and the examination of certain documents and vouchers connected therewith, together with copies of the accounts forwarded by the General Post Office for the period from February 1868 to March 1871, and for the years 1871–72 and 1872–73, and to request that you will place yourself in communication with the authorities of the General Post Office, and inform the Secretary of State for India in Council whether, in your opinion, the accounts now rendered by the Post Office are as complete as it is practicable for the Postmaster-General to make them, and whether you can suggest any improvement in the accounts, or in the examination on the part of this Office which it is proposed in the correspondence to make.

I am, &c.
LOUIS MALLET.

A. M. Monteath, Esq.

No. 2.

12th June 1875.

SIR,

IN your communication of the 4th July 1874, I was requested to place myself in communication with the authorities of the General Post Office, and to report whether, in my opinion, the accounts now rendered by the Post Office in respect of the receipts and disbursements of the Eastern Mail Service are as complete as it is practicable for the Postmaster-General to make them, suggesting also any improvement in the accounts or in the examination thereof proposed to be undertaken on the part of the India Office.

I have taken occasion from time to time, as I have had opportunity, to examine the Post Office Accounts, and the result, so far as I have gone, is an increased conviction of the necessity of investigation.

In the enclosed memorandum I have described generally the results of my examination up to date.

Perhaps the first question to be considered is, whether any attempt should be made to bring under revision and readjustment the accounts for periods prior to 31st March 1874, or whether the steps now to be taken should be directed to procuring a satisfactory adjustment of future accounts, commencing with those of 1874–75, which will very shortly come under preparation.

On the whole, my own opinion is on the side of not re-opening past accounts, and, should the Secretary of State take this view, what is now needed is:—

(1.) Decisions upon the main questions raised in my memorandum.

(2.) A careful supervision on behalf of India of the preparation of the accounts of 1874–75 in accordance with those decisions.

(3.) A consideration of the question whether, the adjustment of 1874–75 having been carefully worked out with proper supervision on the part of India, it may not be made the basis of an arrangement for simplifying the adjustments of future years.

As to my first suggestion, the main questions to be decided may be enumerated as follows, the letters (A, B, C, &c.) being those indicating the headings of the several objections raised in the enclosed Memorandum. Although the objections and the amounts mentioned in each case relate to the figures for 1873–74, they all involve questions equally applicable to the accounts of future years:—

A (*vide* para. 7 of Memorandum).—The inclusion (claimed by me) of "intermediate correspondence" in the correspondence on which the apportionment of the cost of the Mediterranean section is based; or, as an alternative, the exclusion of it from the calculation on which the apportionments east of Galle are made.

I do not think that the London Post Office will raise any objection to the former alternative.

B (*vide* paras. 8 to 19 of Memorandum).—My objection to the apportionment of the cost of the Mediterranean section "according to the number of mails used," instead of simply according to the amount of correspondence conveyed.

The objection involves a reduction of the Indian share by about 16,000*l.* per annum. I believe that my conclusions will be resisted by the London Post Office either partially or wholly.

C (*vide* paras. 20 and 21 of Memorandum).—My claim that, in the event of the above-mentioned objection being overruled, the correspondence sent by the Southampton and Brindisi mails shall be separately treated. This claim (which is alternative to the above, B) involves a reduction of the Indian share by about 4,300*l.* per annum.

I do not understand that the London Post Office will raise objection to this.

D (*vide* paras. 22 to 24 of Memorandum).—My objection to the apportionment of cost to India in respect of the Bombay and Galle line; involving a reduction of the Indian share by about 3,500*l.* per annum.

I should think it quite probable that this point will be conceded, and, as observed in the Memorandum, the Indian Post Office can, if the claim be refused, easily dispense with the use of the line, thus relieving itself of even a greater sum, viz., 7,580*l.*

E (*vide* paras. 25 and 26 of Memorandum).—An error in respect of the apportionment of the cost of the services east of Galle, amounting either to 5,800*l.* (in one view) or 782*l.* (in another view).

The London Post Office will probably admit the latter.

F (*vide* paras. 27 and 28 of Memorandum).—A miscalculation of the apportionment of the miscellaneous expenses, involving a reduction of the Indian share by about 1,386*l.* per annum.

The London Post Office will probably admit this.

The remaining points (G to P) relate to details about which it is unlikely that any difference of opinion would arise.

If the main questions (A to F) be decided, my second suggestion, viz., a careful supervision on behalf of India of the preparation of the accounts of 1874–75 can easily be carried out.

And, when this has been done, it will be readily seen how far the results warrant the conclusion of an arrangement with the view of avoiding, more or less, the compilation of the voluminous statistics on which the adjustment is based, and the laborious working of them out with so many risks of error both in principle and in detail. This is a question to which I know that the London Post Office would gladly turn attention, and the object, if attained, would, I am sure, be equally advantageous to the India Office.

I have, &c.
A. M. MONTEATH.

The Under Secretary of State for India.

No. 3.

MEMORANDUM on the adjustment by the General Post Office of the Charges and Receipts relating to the Eastern Mail Service, 12th June 1875.

I shall commence with a few introductory remarks, having for their object a proper preliminary understanding on the subject in hand.

2. The Report of the Select Committee on East India Communications of July 1866, and the correspondence and negotiations respecting the revision of the Eastern Mail Service both before and after that Report, resulted in the acceptance in November 1867, by the Lords Commissioners of Her Majesty's Treasury, of an offer made by the Peninsular and Oriental

---

* Letter from General Post Office, dated 8th December 1873.
Ditto to ditto, dated 19th December 1873.
Ditto from ditto, dated 14th January 1874.
Ditto to ditto, dated 12th February 1874.

Company; and, when requesting the Secretary of State for India to give his formal assent on the part of the Indian Government to the acceptance of the offer in question, it was stated by the Treasury* that "the "proportion in which the loss is to be borne by the "two Governments will form the subject of an arrange- "ment between this Board and the India Office." This letter was followed two days after by another communication,† forwarding copy of a letter from the Post Office, together with certain statements prepared by it, of which one was "an estimate of the sums which "should be contributed towards the cost of keeping "up the communication between this country and "India, China, Japan, Ceylon, and the Mauritius, by "the Imperial Government and by the Colonies "benefiting by such communication." This estimate was a sample of the calculations, or rather of the results of calculations, to be worked out annually; and, although no details of the calculations were given, the professed principle on which they were based was described in the concluding clause, which I quote, viz.: "The principle adopted throughout has been that each "portion of the cost be divided rateably amongst the "correspondence for the benefit of which the cost is "incurred."

3. This principle was, in fact, the result of a controversy respecting the proper apportionment of the sea-service charges, which had been going on for a considerable time; and, having been approved by the Secretary of State for India,‡ has ever since been regarded as the basis of an agreement between the Treasury and the India Office.

4. When the Government of India protested,§ through the Secretary of State, against an item of charge in respect of the Calcutta and Galle line, the Treasury‖ referred to this correspondence of November 1867 as an agreement which should not be disturbed; and it was not till the Government of India, through the Secretary of State, proved the demand¶ to be one, not for the setting aside of that agreement, but for the fulfilment of its principle, that the Treasury** conceded the point at issue. I mention this simply to show that this correspondence of November 1867, to which I have drawn attention at the outset, has been from the first regarded as the foundation on which the system of international adjustment rests. And, although every year's adjustment has witnessed some modification or another of the detailed calculations with reference to changing circumstances, the agreement of November 1867 has throughout remained the professed basis of them all.

5. As a matter of course, therefore, in the present examination, the agreement of November 1867 forms the starting point, and the aim in the investigation has been to ascertain how far the actual calculations give effect to that agreement.

6. The sea service is divided for the purpose of these calculations into various portions or sections, the cost of each being calculated in proportion to the number of miles run annually; and the first of these is the Mediterranean Section, comprising the services between Southampton, Brindisi, and Egypt. In enumerating my objections, I shall note opposite each the section to which it relates.

OBJECTION A.

Mediterranean Section.

Omission of intermediate Correspondence.

7. The correspondence conveyed over the Mediterranean lines has been wrongly limited to what is termed by the Post Office "international and transit correspondence," *i.e.*, correspondence for or from Great Britain and countries served through Great Britain; "intermediate correspondence," such as that for or from the continent of Europe, or between offices in the Mediterranean, or between them and places east of Suez, being omitted. In the similar calculations for the lines east of Galle, "intermediate correspondence" is taken into account, and gives rise to a large charge upon India, and my argument is that "intermediate correspondence" should either be omitted altogether from all the calculations, or taken into account in all of them. This argument will, I believe, be admitted by the Post Office, the alternative of taking intermediate correspondence into account being preferred. I have reason for regarding the omission as one materially prejudicial to the interest of India, and a rough testing of statistics, carried out at my suggestion, with the view of establishing a *primâ facie* ground for my objection, bore out my opinion.

OBJECTION B.

Mediterranean Section.

Calculation according to Number of Mails.

8. This objection is an important one as regards the financial result, the excess charge to India resulting from the mode of calculation to which I object being no less than about 16,000*l.* per annum. The object of the calculation, according to the principle laid down in the correspondence of November 1867, is to divide the cost of the Mediterranean service rateably amongst the correspondence conveyed. Now, taking the Post Office figures for 1873-74, the cost of the Mediterranean service is 145,094*l.* Out of that sum the Indian correspondence was charged with 88,088*l.*,* and the Australian correspondence with only 26,788*l.*, but the Indian correspondence consisted of 2,009,050 letters, and that of Australia consisted of 2,337,350. A question, therefore, at once arises as to the nature of the "rateable division" under which the country with so much the larger correspondence is charged with so much the smaller share of the cost. I admit that such a question only arises when, as now, the correspondence statistics forming the data of the calculation have been obtained from the Post Office, for these statistics, though forming the basis of the "rateable division," were not communicated to the India Office either with the first estimate or with any subsequent calculations or accounts—never, in fact, till the present investigation was set on foot.

9. A similar calculation of the Australian and Mauritius share of the cost of the old mail service (prior to the present contract of 1867) was the subject of considerable interest to the Select Committee of July 1866, who, however, got no insight into its character from the evidence of the Assistant Secretary, General Post Office, Mr. Fred. Hill, who described, not the mode of calculating actually followed, but the correct mode which (then as now) should have been followed. Mr. Fred. Hill's evidence, to which I refer, will be found in questions Nos. 137 to 139 of the printed volume. The illustration given by him, in his answer No. 139, is so much to the point that I quote it below:— "Say, for instance, that there are 5.000,000 letters "conveyed altogether by the Indian and China "packets, and say that the cost of conveying 5,000,000 "letters is so much, and say that 1,000,000 of the "letters are on account of Australia, then the cost of "conveying the Australian letters is one-fifth part of "the whole cost of the conveyance of all the letters." I give below a repetition of Mr. Fred. Hill's illustration, merely entering the actual figures (obtained from the Post Office) for 1873-74, instead of the imaginary figures used in his illustration:—"Say, for instance, "that there are 5,266,650 letters conveyed altogether "by the Indian and China packets, and say that the "cost of conveying 5,266,650 letters is 145,094*l.*, and "say that 2,337,350 of the letters are on account of "Australia, then the cost of conveying the Australian "letters is 44·38 per cent. of the whole cost of the "conveyance of all the letters."

10. Now my complaint is that, instead of apportioning to Australian correspondence 44·38 per cent. (64,392*l.*) of the whole cost of the Mediterranean section, the London Post Office apportions only 18·46 per cent. (26,788*l.*), and that, instead of apportioning to Indian correspondence 38·146 per cent. (55,348*l.*), it apportions 60·7 per cent. (88,088*l.*), thus increasing the half payable by India from 27,674*l.* (as it ought to be) to 44,044*l.*, *i.e.*, by an excess item of 16,370*l.*

11. Thus the natural interpretation of the principle described by the Post Office in November 1867, and approved by the Secretary of State for India, accords completely with the principle described and illustrated

* From the Treasury to the India Office, dated 14th November 1867.
† From the Treasury to the India Office, dated 16th November 1867. Nos. 12 and 15 of Parliamentary Paper, No. 353 of 1867.
‡ From India Office to Treasury, 19th November 1867. No. 18 of Parliamentary Paper above quoted.
§ India Office to Treasury, 20th August 1869.
‖ Treasury to India Office, 27th September 1870.
¶ India Office to Treasury, 26th April 1872.
** Treasury to India Office, 23rd May 1872.

* Which was divided between the United Kingdom and India, the latter being charged with 44,044*l.*, as shown in the Statement (*a*) attached to the Post Office Letter of 16th December 1874. The figures in the above mentioned statement are perhaps liable to mislead, for the amount under India, viz., 44,044*l.*, is half of the total chargeable to Indian correspondence, whereas the amount under Australia, viz., 26,788*l.*, is the whole amount (including the British half) chargeable to Australian correspondence.

by Mr. Fred. Hill in his examination before the Select Committee of 1866, and what I claim now on behalf of India is the carrying out of that principle.

12. But I have not yet explained the principle of calculation by which the London Post Office has brought out the results of which I complain. It has done so by a mode of calculation quite different from that described by Mr. Fred. Hill in 1866, and quite different from the natural interpretation of the principle declared in the correspondence of November 1867. The London Post Office method is that of calculating, not in direct proportion to the number of letters conveyed, but in reference also to the number of mails by which they are sent. Thus, in the Mediterranean service of which we are speaking, the mail of (say) the first week carries *Indian* mails, that of the second week carries *Indian and China* mails, that of the third week carries *Indian* mails, and that of the fourth week carries *Indian, China, and Australian* mails, and so on, every second mail carrying China correspondence, and every fourth mail carrying China and Australian correspondence. Each of these mails is, so to speak, viewed by the London Post Office as a distinct service, the cost of the Mediterranean section being divided into four equal portions, one for each of these so-called separate services; and, as the Australian mails are to be found in only one of these so-called services, they are made to share the cost of that one only, the China mails, which are to be found in only two of these services, sharing the cost of two only, while the Indian mails, being found in all four sections, take their share of the cost of all. And thus is brought out the anomaly that, while the annual number of Australian letters conveyed over the Mediterranean lines is far in excess of the corresponding number for India, the Australian share of the cost of the Mediterranean section is less than a third of the Indian share.

13. Now, while fully admitting the ingenuity of this system of calculation, I maintain that it is not alluded to, far less contained, in the correspondence of November 1867, which forms the basis of agreement. I further point out that it is directly contrary to the principle expounded by Mr. Fred. Hill, on the part of the Post Office, to the Select Committee of 1866, by which exposition the India Office would naturally be guided in its understanding of what was meant by a cost to be "divided rateably amongst the correspondence;" and I now proceed to point out one way in which this peculiar principle very markedly fails to give justice.

14. Australia, as we have seen, gets her $2\frac{1}{3}$ millions of letters conveyed at less than $\frac{1}{3}$ of the charge made for the conveyance of 2 millions of Indian letters, solely because the former are accumulated into one mail every four weeks instead of being sent in equal proportions in the weekly mails. Now this accumulation of the Australian mails, far from lessening the cost of the mail service, is a source of increased cost, for the mail rooms of every vessel used on the section, or I may say in the fleet, have to be so constructed* as to carry the largest mail, *i.e.*, the mail which contains the accumulated Australian correspondence. To show the effect of this, I give below a specimen of the weight by measurement of four consecutive mails taken from the Statistics given in Appendix 9 (p. 571) of the Report of the Select Committee of 1866. No like statistics of more recent date happen to be available, but even if they were the general result would be the same:—

JANUARY 1865.

	Carrying Mails for	Cubic Tons.
First Mail	India, China	18
Second Mail	India	13
Third Mail	India, China, Australia	99
Fourth Mail	India	10

If the Australian correspondence were equally divided amongst the four mails, the mail-room accommodation need not exceed 40 tons, whereas a mail room of 100 tons is required when the whole Australian correspondence is accumulated in one mail out of every four.

15. And the extent of this mail-room accommodation was a matter of some moment to those who had to tender for the mail service, as may be inferred from the evidence given by Mr. Howell on behalf of the Peninsular and Oriental Company to the Select Committee of 1866 (Questions 1419 to 1421, and 1587 and 1588) in which he points out that "our Australian Mail from Southampton is now a cargo for a small ship."

16. Considering, then, that on every vessel it is practically necessary to provide a mail room measured by the requirements of the Australian mail, and that these large requirements affecting the whole fleet are caused by the fact of the Australian mail being sent only once in every four weeks, I think it is unreasonable that this very fact, which is a cause of increased expense to the service generally, should be the cause of diminishing the share chargeable to the Australian correspondence.

17. My argument is merely that the principle is unreasonable. I believe it to be so; but, whether reasonable or unreasonable, it has been introduced, as already stated, without any warrant in the agreement of November 1867, and in direct opposition to Mr. Hill's exposition to the Select Committee of the principle of apportionment.

18. And the introduction of this principle is not only unwarranted by the agreement, not only opposed to Mr. Hill's exposition, not only, as I believe, unreasonable in itself, but its application gives rise, as might be expected, to many anomalies. The correspondence travelling by one mail is calculated to cost about 42*l.* per 1,000 letters, that travelling by the following week's mail about 60*l.* per 1,000 letters, and by the third week's mail about 11*l.* per 1,000 letters. If, for instance, the East African Time Table is so arranged as to fall in with the cheap Mediterranean mail, the Zanzibar correspondence will cost 11*l.* per 1,000 letters, but if (and it happens to be so) it comes by one of the expensive mails, the charge is five times as great. Similarly, the Queensland correspondence by the new Torres Strait route comes (and it so happens since 1874) by a more expensive Mediterranean mail than the other Australian correspondence, the charge being thereby more than trebled.

19. Of course, I mention these anomalies merely as anomalies, resulting from a system of calculation which I hold to be not only anomalous, but unreasonable in itself, to be wholly unwarranted by the express declaration of the principle of calculation in the correspondence of November 1867, and to be also in direct opposition to the principle explained by Mr. Fred. Hill, in his evidence before the Select Committee.

OBJECTION C.

Mediterranean Section.

Separation of Southampton and Brindisi Mails.

20. My next objection will only arise in the event of the preceding objection (B) being overruled. I have in the preceding paragraphs argued against the splitting up of the Mediterranean section into particular mails according to the use made of them by the several countries interested; and I trust that it will be considered that I have given good reason for that objection. But, should it be ruled that the London Post Office is warranted, by agreement or otherwise, in splitting up the service into sub-sections according to the use made of them, then I submit that that principle should be fully carried out; it should be carried out not merely (as has been the case) where it happens to benefit the Australian or China correspondence, but where it may be found to benefit the Indian correspondence. It so happens that for Indian correspondence the Southampton route is much less used (in proportion) than for Australian correspondence, and what I claim is, that the subdivision system should be extended, so as to make distinct calculations for the Southampton and Brindisi mails. In other words, if in the calculation before us a subdivision of Mediterranean mails is to be made according to the use made of them by particular countries, India is, I submit, entitled to have the benefit of the fact that she uses the Southampton route less than other countries. India will, of course, pay fully for her use of the Southampton mails, and fully for her use of the Brindisi mails, the only change being that the calculation will be made out separately for each route instead of in lump for both.

* The mail room is a portion of the vessel quite separate from the cargo portion, and cannot, even if nearly empty, be used otherwise than for mails.

21. Taking the figures of 1873-74, this alteration would reduce the charge upon India by about 4,300*l.* per annum.

OBJECTION D.

Bombay and Galle Section.

This Section was not and is not one required for Postal purposes.

22. My next objection relates to the Bombay and Galle line. This line and the Calcutta and Galle line were not required for postal purposes; and, this point having been definitely settled in communication with the Government of India, no tenders for the service generally were called for; but the Peninsular and Oriental Company represented that their vessels must for commercial purposes run over these lines, the subsidy required for the postal lines being in no way affected by their inclusion or exclusion, and on that account, and that alone, they were included in the contract. This being the case, it was held by India that, in apportioning the subsidy payment among the several lines, these lines should be omitted, being, in fact, not postal lines but commercial adjuncts. The effect of this would be to throw upon the lines really required for postal purposes the share of subsidy erroneously apportioned to these commercial lines, India, of course, bearing its share of the increased cost of the other lines, but escaping the far heavier share assigned to it by the treatment of these commercial lines as if they were lines for postal purposes.

23. After some correspondence,* the point was conceded by the Treasury *as respects the Calcutta and Galle line*, and my present objection has reference, therefore, solely to the Bombay and Galle line. In my representation of the case which was forwarded with the Government of India Despatch (Financial), of the 22nd March 1875, No. 5, and which formed an enclosure of the India Office communication to the Treasury quoted in the margin above, both of these lines were included, but *by an apparent oversight* the Government of India covering Despatch *omitted to mention the Bombay and Galle line*, and the reply of the Treasury was, of course, similarly limited. The Government of India was then writing in continuation of a previous despatch which had sole reference to the Calcutta and Galle line, and appears to have inadvertently described the later representation as having a like object. But in point of fact it had a wider object, as will be seen by reference to the enclosure; and I may here remark that there is not an argument advanced on behalf of the exclusion of the Calcutta and Galle line (to which the Treasury acceded) which was not advanced on behalf of and is not equally applicable to the Bombay and Galle line. To apply the same principle to the latter line would give a saving of about 3,500*l.* per annum to India, that is, the Indian share of the supposed cost of the Bombay and Galle line, viz., 7,580*l.* a year, would be struck off, but owing to the increased amount thereby apportioned to the other lines the net decrease of charge would be only about 3,500*l.* a year.

24. I may mention that the Indian Post Office has the settlement of this question practically in its own power, and that the knowledge I have now acquired of the strangely anomalous results of the continued application to this line of an unjustifiable principle will probably induce the above-mentioned Department to exercise that power, in the event of the course indicated above being objected to by the British Post Office or the British Treasury. The Indian Post Office has no need whatever to send any correspondence by the Bombay and Galle line (having other independent routes by land and sea), and if it stops sending correspondence the result will be that, under the principle of calculation hitherto insisted on by the British Post Office, the whole cost will fall upon Great Britain, thus relieving India of the charge of 7,580*l.* a year, instead of the more moderate relief (3,500*l.*) which would result from the adoption of the course recommended by me above. In other words, if the British Post Office should continue to charge the cost of this line (which, as already stated, was not required or contracted for on postal grounds) on the small amount of correspondence which happens to be sent by it (though under no necessity of being so sent), the practical answer of India will be the sending of no correspondence, leaving the whole cost of the line to be charged against the correspondence sent by non-Indian offices. There will, in this case, be no alteration of the calculation or its principle, except that the figures therein representing Indian correspondence and Indian liability will be *nil*.

* From India Office to Treasury, 26th April 1872.
From Treasury to India Office, 23rd May 1872.

OBJECTION E.

Galle and Singapore; Singapore and Hong Kong; Hong Kong and Yokohama Sections.

Error of Calculation.

25. This objection takes the ground that the actual calculation does not follow even the professed principle of calculation. I have already alluded, under Objection A., to the unwarrantable difference in the principle of calculation adopted in respect of the Mediterranean service and the service east of Galle, "intermediate correspondence" (*i.e.*, correspondence other than that with the United Kingdom or countries served through it) being omitted in the one case and included in the other. If, in reference to my remarks, it be determined to omit "intermediate correspondence" from the calculations of the lines east of Galle, I have no objection to make, the charge raised against India being in that case diminished by about 5,800*l.*; but, if this be not done, then I take the ground of observing that even the principle professed to be acted on is not carried out in the actual calculations.

26. The professed principle, as stated in the London Post Office description thereof, is that the Imperial Government should bear half the cost of these services, the remaining moiety being divided between India and the other countries in proportion to the number of letters conveyed for each. Now, when I come to examine the actual calculation, I find that this principle is not carried out, the excess charge to India being 782*l.* per annum.

OBJECTION F.

Miscellaneous Expenses.

Miscalculation.

27. This objection relates to miscellaneous expenses. These expenses are for the maintenance of packet agencies at Alexandria and Suez, for janissaries to accompany the mails in Egypt, for the transit charges of mails through Egypt, for Dover and Calais packets, for mail bags, and for Continental mail officers, aggregating altogether, for 1873–74, 13,797*l.* Besides this, the British Post Office pays 1,690*l.* for packet agencies in Ceylon, China, the Straits Settlements, and Japan, India on the other hand paying for the agency at Aden. The question in hand is the share of the sum of 13,797*l.* which properly belongs to India. The plan followed has been to regard this as a charge to be apportioned rateably among the international and transit correspondence, *excluding, however, the Australian correspondence.* The reason of this exclusion is that, as respects some of the items* composing the account of miscellaneous expenses, the charge debitable to Australian correspondence has been separately settled, the amount shown in the account being what belongs to the India, China, and other mails (not including the Australian); but, on the other hand, no reason whatever is given for relieving Australian correspondence from its share of the other items. The Indian share, if reckoned rateably with Australian, China, and other correspondence in respect of the last-mentioned items, and rateably with China and other mails (not Australian) in respect of the items first mentioned, amounts (for 1873–74) to 3,761*l.*, instead of 4,732*l.*, as calculated by the London Post Office, the saving to India being 971*l.* per annum.

28. And even the supposed previous settlement of the Australian share of the Egyptian transit charge cannot be accepted as a proper settlement. The amount paid by Australia is stated to have been 3,250*l.*, which, no doubt, more than represents the Australian half of the share due on account of Australian correspondence, but it does not represent the full share due jointly from Australia and Great Britain for that correspondence. Making this further adjustment, the Indian share, calculated by the London Post Office at 4,732*l.*, already reduced by me (preceding paragraph) to 3,761*l.*, is still further reduced to 3,346*l.*, the saving to India being 1,386*l.*, per annum.

29. I have now gone over what I may call the objections involving methods or principles of calcula-

* Viz., Egypt transit; Calais and Dover packets; cost of mail bags.

tion. But there are besides a number of detailed points on which I raise questions or objections, as well as others to which it will be necessary to give attention in any future calculations; and to some of these I may make the following brief reference, each point being indicated by a letter of the alphabet in continuation of the objections already given.

G The statement of international and transit correspondence, which forms the foundation of calculations both in the Mediterranean and in the East, appears to be open to question, for, while it professes to include mails in both directions, the Manilla mails are given only in one direction (outwards). I have as yet received no satisfactory explanation of this, though, of course, it may turn out that the return correspondence is sent wholly by French packet or in the mails from some other office.

H The Zanzibar correspondence appears to have been wrongly entered in the calculation for 1873–74; it has been entered half under the head (*b*) and half under the head (*c*), whereas under present time table arrangements it belongs to neither. It is a question depending on the time tables in force in the year in question, which the London Post Office has promised to consult. With Zanzibar correspondence should be included any other East African correspondence. It may have been too small in 1873–74 to be taken notice of, but has possibly increased.

J In the calculations of 1874–75 and future years it will be necessary to see to the correct treatment of Queensland correspondence with reference to the remark already made incidentally under objection B.

K The Zanzibar and East African mails ought to bear a share of the cost of the Suez and Bombay section.

L In the calculations for the sections Galle and Singapore, Singapore and Hong Kong, and Hong Kong and Shanghai, the correspondence with Europe through France and Italy has been entirely omitted. In future years direct German mails will probably have to be included in these calculations.

M In none of these calculations has account been taken of the closed mails sent by British packet between France, Spain, or Holland, and the East.

N In the calculation for the sections Singapore to Hong Kong, and Hong Kong to Shanghai, and Hong Kong to Yokohama, the correspondence to Java is entered, but none from Java, a fact which points to a possible omission, though, of course, it may be found on inquiry that the missing correspondence is included in some other returns.

O The calculation for the section Galle to Singapore will also, in 1874–75 and future years, be considerably affected by the new Torres Straits route to and from Queensland.

P The new contract with the Peninsular and Oriental Company respecting the use of the canal, will also affect (quite apart from the alteration of subsidy) the calculation for the Mediterranean service; indeed, by altering the mileage of the Southampton route, it will indirectly affect all the calculations. It will be important here to bear in mind the distinction between the Southampton and Brindisi mails referred to under C.

30. I now turn to the accounts showing the division with India of the postage collections. My examination, so far, has not led me to expect much error in these accounts. An error appears to have been committed in the account for 1873–74, whereby too much postage has been entered under the heads of France and Italy, the excess being 3,418*l.*, so that the credit to India is in excess to the extent of one-half thereof, viz., 1,709*l.* This error does not relate to 1872–73, but only to 1873–74. Should it be decided to bring the accounts for 1873–74 under revision, this item in favour of the British Post Office may be allowed as a set-off so far to the large claims to be raised on behalf of India.

A. M. MONTEATH.

No. 4.

India Office,
21st August, 1875.

SIR,

With reference to previous correspondence, more especially to the letters noted in the margin,* I am directed by the Secretary of State for India in Council to forward, for submission to the Lords Commissioners of Her Majesty's Treasury, copy of a letter from Mr. A. M. Monteath, the Director General of the Post Office of India,† enclosing a memorandum, in which that gentleman raises objections to the way in which the General Post Office carries out the adjustment of the charges and receipts relating to the Eastern Mail Service.

The Marquis of Salisbury trusts that attention will be given to the points referred to by Mr. Monteath in adjusting the accounts of 1874–75. Should the Lords Commissioners of Her Majesty's Treasury or Her Majesty's Postmaster-General require any further explanation respecting the objections raised by Mr. Monteath against the present mode of adjustment, I am desired to state that Mr. Monteath will be happy to afford it during the remainder of his visit in this country, which extends to the end of October next. His address is, care of Messrs. H. S. King and Co., 45, Pall Mall.

I am to add that Lord Salisbury will be glad to be informed of the decision of the Lords of the Treasury on this subject.

I am, &c.
LOUIS MALLET.

The Secretary to the Treasury.

No. 5.

No. 427/76. Treasury Chambers,
18th January 1876.

SIR,

THE Lords Commissioners of Her Majesty's Treasury have had before them your letter of the 21st August last, transmitting copy of a letter from Mr. A. M. Monteath, the Director-General of the Post Office of India, enclosing a Memorandum, in which he raises objections "to the way in which the General Post "Office carries out the adjustment of the charges and "receipts relating to the Eastern Mail Service."

I am commanded to acquaint you that my Lords, having referred the question brought forward in Mr. Monteath's Memorandum to the Postmaster-General, have received from his Lordship a Report covering a Memorandum on the subject, which has been prepared in his Department.

I am now directed to forward to you copies thereof, and to request that, in laying the same before the Secretary of State for India in Council, you will state to his Lordship that, as respects the objections raised by Mr. Monteath, my Lords concur in the observations contained in the Post Office Memorandum.

I am further to state, with reference to the concluding paragraph in Mr. Monteath's letter to the Under Secretary of State, and to the remarks thereon of the Postmaster-General, that my Lords see no reason to object to an arrangement such as that proposed therein being carried out—namely, that, instead of the present method of adjustment between the Imperial and Indian Post Offices, a fixed percentage of the gross cost of the service should be agreed upon to regulate the contribution to be made by India, until the termination of the present contract with the Peninsular and Oriental Steam Navigation Company.

I am, &c.
WILLIAM LAW.

Sir Louis Mallet, C.B.

No. 6.

General Post Office,
8th January 1876.

MY LORDS,

I HAVE the honour to return the letter from the India Office, referred to me by your Lordships on the 24th August last, containing a letter from Mr. Monteath, the Director-General of the Post Office of India, accompanied by a Memorandum in which he raises objections to the manner in which this Department carries out the adjustment of the charges relating to the Eastern Mail Service.

---

* From Treasury to India Office, 14th and 16th November 1867.
To ditto from ditto, 19th November 1867.
To ditto from ditto, 20th August 1869.
From ditto to ditto, 27th September 1870.
To ditto from ditto, 26th April 1872.

† 12th June 1875.

It seems to me that the most convenient mode of placing your Lordships in possession of the views of this Department, and of enabling you to consider Mr. Monteath's objections, will be to forward a Memorandum which has been prepared on the subject, and which refers specifically to each point under discussion.

In now submitting the Memorandum in question to your Lordships, I beg leave to say that I consider it desirable that an arrangement such as that proposed in the last paragraph of Mr. Monteath's letter to the Under Secretary of State for India should be carried out, and that, instead of the present method of adjustment, which requires the laborious compilation of voluminous statistics, exposed to risks of error, both in principle and detail, a fixed percentage of the gross cost of the service should be agreed upon to regulate the contributions to be made by India, until the termination of the present contract with the Peninsular and Oriental Steam Navigation Company.

I have, &c.
JOHN MANNERS.

The Lords Commissioners
of the Treasury.

No. 7.

MEMORANDUM.

Mr. Monteath does not appear to have rightly apprehended the general principle of the arrangements for the division of the expenditure incurred for the conveyance of Eastern mails, which was approved of by the Secretary of State for India in his letter to the Treasury, dated 19th November 1867. In the Appendix to the Report of the Select Committee on East India Communications, pages 559–60, will be found a letter from the Secretary of the Treasury to the Postmaster-General, dated 11th July 1854, referring to the relations which should exist between this country and India, thus,—

"So far as the commercial relations between this country and India are concerned, my Lords are of opinion that each country is equally interested, and therefore the revenues of England and India may fairly be called upon to contribute equally to any expense the object of which is to encourage such commercial intercourse."

"So far as political considerations are involved, it appears to my Lords, adverting to the principle upon which the Indian Government is conducted in relation to financial matters, that the whole cost on this consideration should be defrayed from Indian revenue."

The existing contract with the Peninsular and Oriental Steam Navigation Company was entered into chiefly with the view of securing for India the benefit of a direct weekly service with this country, a fact which it is most important to bear in mind whilst considering the points now raised by Mr. Monteath. Mr. Monteath's objections are now dealt with *seriatim*.

As to Objection A.

Intermediate correspondence has been excluded from the Mediterranean section, as it did not come within the arrangement contemplated in the principles laid down in November 1867. It certainly does not form part of the correspondence for the benefit of which the cost was incurred, and the effect of including it would be a loss to this country, and a consequent gain to India, of 4,742*l*. per annum.

It must not be supposed that India receives no benefit from this intermediate correspondence, for she is credited with her portion of the sea postage derived from it, and therefore is placed in the same position as the United Kingdom with respect to the cost.

With regard to Mr. Monteath's observations as to either including or omitting altogether intermediate correspondence, in calculating the cost of the service, the latter course appears preferable.

As to Objection B.

In adverting to Mr. Monteath's objections under this head, it is right to give some explanation of the plan actually adopted for dividing the cost of the Mediterranean section. This section is divided into three sub-heads, viz.:—

Yearly No.
a (26 packets).
b (13 packets).
c (13 packets).

As the exact number of letters conveyed by each packet cannot be ascertained, it is necessary to take into consideration the number of packets employed when calculating the charges to be made rateably amongst the correspondence for the benefit of which the cost is incurred, for example:—

Sub-head a (26 packets).

India uses 26 packets more than any other country, and, the total number of packets running being 52 annually, India is charged for one half its total number of letters under this sub-head.

Letters for Gibraltar, Malta, and Egypt are also sent 52 times annually, and half these letters are consequently charged to the Imperial Government under sub-head *a*.

Sub-heads b and c (13 packets each).

India is charged upon one quarter of its letters under each of these sub-heads:—

Gibraltar, Malta, and Egypt.—One quarter of the letters for these places is charged to the Imperial Government under each of these sub-heads.

China, Japan, &c., use 26 packets annually, and their letters are therefore divided equally between these sub-heads.

Australia uses 13 packets only, and its letters are charged under sub-head *c*.

Zanzibar letters are forwarded 13 times annually, and are equally divided between *b* and *c*. This service is further referred to under replies to objections H and K.

On the principles thus described, the division of cost of the Mediterranean section for the year 1874 was as follows:—

Indian Share.

	£
2,009,050 letters, carried in 52 packets -	43,513

Australian Share

(now borne by the Imperial Government).

2,337,350 letters, carried in 13 packets -	26,788
Balance of cost borne by Imperial Government - - - -	74,793
Total cost of section -	£145,094

India is considerably the gainer by its correspondence being associated with Australian and other correspondence in this service, for, if a contract had been made for India alone, at the present rate per mile, the share of the cost of the service to be borne by the Indian Government would have been 72,547*l*. instead of 43,513*l*.

The method of calculating this section according to the number of mails conveyed is in accordance with the principle laid down in the correspondence of November 1867, and approved by the Secretary of State for India on 19th of the same month. That principle distinctly provides that "the cost should be divided rateably "amongst the correspondence for the benefit of which "the cost is incurred."

The present cost was incurred to provide India with a weekly mail, China, &c., with a fortnightly mail, and Australia with a four-weekly mail. Australian correspondence bears its full share of the cost of the number of packets which are actually used for its conveyance.

Mr. Monteath evidently misapprehends the principle in question, since he states it, or rather misstates it, as that of division of cost "rateably amongst the correspondence conveyed," entirely ignoring the different degree of benefit accruing to each country by the conveyance of the correspondence 52, 26, or 13 times a year.

Mr. Hill's answers to the questions referred to by Mr. Monteath were in explanation of a sum of 33,000*l*., the cost of Australian and Mauritius mails under the old system, when the whole of the sea postage was deducted from the cost of the India and China lines of packets, and the remainder, which represented the loss, was paid in contributions of equal proportions by the Imperial Government and the Government of India. But, when India complained of being obliged to contribute to services in which she was not substantially interested, the system was revised, and India is now only charged to the extent to which she uses the service.

Mr. Hill's answer related, therefore, to an entirely different state of things, and has nothing whatever to do with the present.

If India had the benefit of 13 mails a year only while Australia had the benefit of 52 mails a year, we should hardly expect Mr. Monteath to argue that India should pay anything for the 39 mails which conveyed no letter for India.

The natural and reasonable view has been taken by this Department in separating, for the purposes of the computation of the Australian share of the loss, those packets which carried Australian letters from those which carried no Australian letters, and in giving India the advantage of the Australian contribution to the packets which carried both Indian and Australian correspondence.

By including the intermediate correspondence in distributing the cost of the Mediterranean section, and by assessing the Australian correspondence as though it were sent by 52 mails in the course of the year instead of by 13, the loss devolving upon the United Kingdom would be increased by no less a sum than 17,556*l.* per annum.

The additional accommodation required for the Australian mail is a contingency inseparable from the nature of the service, and, as it existed at the time the contract was entered into, there can be no doubt the point was well considered when the present service was granted to India.

But it cannot be supposed that, even if the Australian mails had ceased to be carried to Galle, the Peninsular and Oriental Company would have abated anything worth mentioning from their tender for the remaining service.

As to Objection C.

The suggestion to divide the Southampton and Brindisi mails and make a separate calculation for each is quite contrary to the principles laid down in November 1867, and agreed to by the India Office. This would be an anomalous proceeding, inasmuch as the Brindisi mail is but an accelerated portion of the service.

The fact of India sending a smaller proportion of correspondence *viâ* Southampton than *viâ* Brindisi is no argument in favour of India being further relieved from its liabilities in respect of the service between Southampton and Suez, inasmuch as this service was established chiefly for such correspondence, and can only be maintained during the present contract in its entirety.

If India were to send all her mails *viâ* Brindisi, and to abandon the Southampton route altogether, then, according to Mr. Monteath's suggestion that the Southampton service should be divided into two portions, India would be relieved from contributing anything to the Southampton portion of the service, although the packets must still of necessity run between Southampton and Suez, in order to carry forward the Indian mails.

If the calculations were made on the plan set forth by Mr. Monteath, and intermediate correspondence were included as proposed under the head of Objection A, the effect would be a loss to this country and a gain to India of about 7,000*l.* a year.

As to Objection D.

The Bombay and Galle section has been included in the calculations, in accordance with the arrangements made in November 1867.

Originally India was charged with a share of the cost of the lines, both between Calcutta and Galle and between Bombay and Galle, but, at the urgent solicitation of the Indian Government, the Treasury consented to relieve the Indian Revenue from any charge for the former of these two lines of communication between India and China. It cannot be supposed that the Indian Government would consent to adopt the course which Mr. Monteath states to be open to the Indian Post Office, and, with the view of evading the charge which properly devolves upon India (as agreed to by the Secretary of State for India on the 19th November 1867), divert into other channels the correspondence proper to the Bombay and Galle line.

It may be added that the advantage to India of the Bombay and Galle line is shown in Despatch No. 5A, dated at Simla, 11th June 1869, from the Government of India to the Duke of Argyll, wherein the abolition of the Galle and Calcutta line is advocated, on the grounds that the Indian Post Office had "alternative "channels of communication, *viâ* Bombay, by the "railway and the Bombay and Galle line, and by "local contract steamers down the coast."

As to Objections E, F, I, L, O, P.

If a certain fixed percentage be agreed upon, the objections under these heads will no longer exist.

As to paragraph G.

It has been ascertained that the Manilla mails (inwards) were accounted for together with the Singapore mails. The explanation has since been given to Mr. Monteath.

As to paragraphs H. and K.

The Zanzibar mails are forwarded only thirteen times a year, and have been treated accordingly.

As shown in reply to Objection B, the cost has been calculated under subheads *b* and *c*. It might have been limited to *c*, that being the sub-head for 13 mails, but by charging one half of the correspondence under sub-head *b* the charge upon India under that sub-head has been proportionately reduced, and this reduction may fairly be considered as compensation to India for the conveyance of Zanzibar correspondence from Suez to Aden on the Suez and Bombay Section.

As to paragraph M.

The closed mails referred to have, with some trifling exceptions, been forwarded between the countries named and their possessions in the East, and, as these countries could not be required to contribute towards the loss on the service, the correspondence has properly been omitted from the calculations. The sea postage derived from this correspondence has been shared in due proportions with India.

As to paragraph N.

Mails *from* Java have not been included in the calculations of the cost of any of the sections, as there is no trace in this Office of such correspondence.

As to paragraph 30.

In preparing the accounts for 1873–74, for the division of sea postage between this country and India, the amounts for direct mails from France and Italy were inadvertently entered in bulk, instead of those items only which properly fell to the Indian share.

As this was obviously a clerical error in preparing the accounts, the amount in question will be adjusted in the accounts now under preparation.

No. 8.

India Office,
14th February 1876.

SIR,

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of Mr. Law's Letter of the 18th January, No. 427/76, relative to the objections urged by Mr. Monteath, the Director-General of the Post Office of India, "to the "way in which the General Post Office carries out the "adjustment of the charges and receipts relating to "the Eastern Mail Service."

2. In reply, I am directed to state that the Marquis of Salisbury proposes that it be referred to the arbitration of Viscount Halifax, G.C.B., to settle, first, a fixed percentage of the gross cost of the Mail Services which shall regulate the contribution to be made by India until the termination of the present contract with the Peninsular and Oriental Steam Navigation Company, with special reference to the several questions raised in the Memoranda by Mr. Monteath and the London Post Office; and, secondly, the extent to which the principle determined on shall be applied to the accounts which have not yet been rendered.

I am, &c.,
G. HAMILTON.

The Secretary to the Treasury.

No. 9.

Treasury Chambers,
My Lord, 16th February 1876.

With reference to your Lordship's letter of the 14th instant, relating to the objections raised by Mr. Monteath, the Director-General of the Post Office of India, to the way in which the Post Office carries out the adjustment of the charges and receipts relating to the Eastern Mail Service, I am directed by the Lords Commissioners of Her Majesty's Treasury to acquaint you, for the information of the Secretary of State for India in Council, that my Lords agree to the proposal that the matters in dispute between the two Departments should be referred to the arbitration of Viscount Halifax, G.C.B.

I am desired to transmit, herewith, for your information, a copy of a letter* which my Lords have caused to be addressed to the Postmaster-General on this subject, and I am to request that Mr. Monteath may be placed in immediate communication with the Postmaster-General.

I have, &c.,
William Law.

Lord George Hamilton, M.P.,
India Office.

No. 10.

Treasury Chambers,
My Lord, 16th February 1876.

With reference to your Lordship's letter of the 8th ultimo, and the reply from this Board dated the 18th ultimo, relating to the objections raised by Mr. Monteath, the Director-General of the Post Office of India, to the manner in which your Lordship's Department carries out the adjustment of the charges relating to the Eastern Mail Service, I am directed by the Lords Commissioners of Her Majesty's Treasury to transmit to you herewith, for your Lordship's information, a copy of a letter which my Lords have received from the India Office, proposing that the questions at issue shall be referred to the arbitration of Viscount Halifax, G.C.B.

I am to state that my Lords understand that Mr. Monteath is about to return to his post, and it would, therefore, appear desirable that the questions to be submitted to Lord Halifax (whose decision the Government will accept) should be agreed between the two Departments, and it would also be desirable that Mr. Monteath should have, previous to his departure, the opportunity of putting his statement in writing, in support of his contention, before Lord Halifax.

I have, &c.,
William Law.

The Postmaster-General.

No. 11.

India Office,
My Lord, 18 February 1876.

Mr. Monteath, the Director-General of the Post Office in India, having urged some objections "to "the way in which the General Post Office in London, "carries out the adjustment of the charges and receipts "relating to the Eastern Mail Service,"—it has been determined to refer the questions at issue to arbitration.

2. Your Lordship having consented to act as arbitrator, I herewith forward the correspondence† between Mr. Monteath and the Post Office, with the letters received from the Lords Commissioners of Her Majesty's Treasury.

3. I shall esteem it an additional favour if your Lordship will name an early day for holding the arbitration, as Mr. Monteath, has engaged his passage for India by the next mail, and will leave London on the 23rd instant.

I have, &c.
Salisbury.

The Viscount Halifax, G.C.B.

* 16th February 1876.
† From India Office to Mr. Monteath, 4th July 1874.
Mr. Monteath to India Office, 12th June 1875.
India Office to Treasury, 21st August 1875.
Treasury to India Office, 18th January 1876.
India Office to Treasury, 14th February 1876.
Treasury to India Office, 16th February 1876.

No. 12.

10, Belgrave Square,
My Lord, 25th February 1876.

I have received your Lordship's letter of the 18th February, and the papers to which it refers, on the subject of the questions raised by Mr. Monteath, the Director General of the Post Office in India, as to the adjustment of the charges and receipts relating to the Eastern Mail Contract.

I have read these papers, and others which I received from the General Post Office, and I saw together Mr. Monteath and two gentlemen, Mr. Chetwynd and Mr. Cardin, on behalf of the General Post Office.

I understand, from the proposal in the letter from the India Office to the Treasury of 14th February 1876, and assented to by them, that I am to settle, first, "a "fixed percentage of the gross cost of the Mail Service "which should be paid by India till the conclusion of "the present contract, with special reference to the "several objections raised by Mr. Monteath," and, secondly, "the extent to which the principle determined "on shall be applied to the accounts which have not "been rendered."

After a long discussion with Mr. Monteath and the gentlemen representing the General Post Office, and going through with them the several objections to the charge now made on India, contained in Mr. Monteath's Memorandum of 12th June 1875, and the answers thereto, in a Memorandum prepared at the General Post Office, and transmitted to the Treasury in a letter from Lord John Manners of 8th January 1876, which were included in the papers sent to me from the India Office, I have come to the following conclusions:—

1. I have decided on all the questions raised in those papers, and marked from A to P, and I transmit, in a separate paper annexed to this letter, my decisions thereon.
2. These decisions will enable the General Post Office to make out the accounts for 1874–75 in accordance with those decisions; and I was assured by the gentlemen whom I saw that there could be no difficulty in doing so, with the concurrence of both parties.
3. It will then be a simple calculation to ascertain what percentage of the whole cost of the Mail Service for the year 1874–75 the sum charged to India will be, and that percentage of the cost, in every subsequent year to the end of the contract, should be paid by India.
4. I am further of opinion that it is not desirable to raise any question as to the accounts of any year previous to 1874–75.

I have the honour to be,
My Lord,
Yor Lordship's obedient Servant,
Halifax.

The Marquis of Salisbury.

Paper annexed to Lord Halifax's letter, containing his Decision on the various points submitted to him, and marked from A to P.

A I am of opinion that, as regards the Mediterranean section of the service, no charge should be imposed on India in respect of correspondence between places east of Suez, other than India, and the Continent of Europe, India paying for her own correspondence.

B, C, D The charge to remain as at present.

E The miscalculation stated by Mr. Monteath is admitted, and will be corrected.

F To remain as at present.

G Mr. Monteath was satisfied.

H, I, K To remain as at present.

L To be dealt with in accordance with the decision on A.

M To remain as at present.

N No such correspondence.

O This correspondence to be included when the case arises.

P The percentage or proportion of payment by India to remain the same in any altered annual payment.

Halifax.

25th February 1876.

No. 13.

India Office,
28th February 1876.

My Lord,

I have the honour to acknowledge the receipt of your letter of the 25th instant, containing your Lordship's decision on the points at issue between the General Post Office and Mr. Monteath, the Director-General of the Post Office in India.

2. I request that your Lordship will accept my most sincere acknowledgments and thanks for the great trouble you have taken in effecting a settlement of these intricate questions. I have no doubt that your Lordship's award will have the excellent effect of preventing any renewals of discussions in connexion with the contract for the Mail Service between England and India.

I have, &c.

Salisbury.

The Right Honourable
The Viscount Halifax, G.C.B.

APPENDIX No. 64.

Memorandum by Mr. Stephen Jacob, C.S.I., handed in by Sir H. Waterfield (referred to in Q. 12,326.)

Zanzibar—Mauritius Cable.

In June 1890 the Government of India addressed the Secretary of State on the subject of telegraphic communication between India and England in time of war, and put forward the specific proposal that, in order to give an alternative route in time of war, India should be placed in telegraphic communication with the Cape, and thus with England, by means of a new cable from Ceylon viâ Mauritius to the Cape.

This despatch and proposal were referred to a Departmental Committee, consisting of two members, each from the India Office and the Colonial Office, and one member each from the Admiralty, the Foreign Office, and the War Office.

This Committee did not recommend expenditure on increasing the routes between England and India, but considered that telegraphic communication with Mauritius would be of the utmost importance, in the event of war, both to Great Britain and India, and strongly urged that arrangements should be at once made to secure such communication by providing a cable connecting Mauritius with Africa (viâ Seychelles), and thus with England on the one side and with India (via Aden) on the other. They recommended that the expense should be shared by the Governments of Great Britain and India and the Colony of Mauritius, but did not specify any definite proportion to be borne by each.

This was, therefore, an entirely new proposal. It did not afford India any new route of communication with England; that had already been secured viâ Aden and the Eastern and Western coasts of Africa. The Committee's proposal was based on the view that, in the event of a diversion of the commerce of India from the Suez Canal to the Cape route, which might occur in case of a European war, Mauritius would be the base from which our cruisers would operate for the protection of that commerce, and in any case would be an outpost of the greatest importance to India.

The Government of India (the Financial Member—Sir David Barbour—dissenting) accepted the conclusion of the Committee* as to the vital importance to the Eastern carrying trade of establishing telegraphic communication between the Mauritius and India by the proposed cable, and accordingly recommended that India should bear *a moderate share* of the necessary subsidy.

The grounds of Sir David Barbour's dissent are thus stated in the despatch:—

"Our colleague, Sir David Barbour, dissents from the view that a portion of the subsidy for the proposed cable should be paid by India. He considers that it is the duty of India to preserve internal tranquillity, and to protect her frontiers by land and sea, and, therefore, to incur the necessary expenditure for the protection of her ports; but that the duty of protecting commerce on the high seas should, in the future, as it has done in the past, devolve on England. All this commerce is carried under the English flag, and in British ships, and would have equally to be protected, in the interest of England, if India were a foreign and neutral power."

The Government of India admitted the soundness of the general principles thus enunciated, and trusted that they would be borne in mind in fixing the proportion of the subsidy to be paid by India; but, in view of the importance of the scheme, they considered that they were justified in giving some assistance towards its early completion.

On the 7th of July 1891, before the views of the Government of India, as expressed in the above despatch, could have reached England, the Secretary of State telegraphed to the Government of India as follows:—

"Her Majesty's Government have decided that cables to Mauritius viâ Seychelles be laid, and propose after a time abating contribution of Mauritius, remainder of subsidy, probably the maximum of 24,000*l.*, being equally divided between England and India. What do you say?"

To which the Government of India replied:—*

"For reasons given in our Despatch, No. 11 (Telegraph) dated 23rd June, we consider Indian contribution should be substantially less than that contributed by Imperial Government."

On 12th August 1891 the Secretary of State again telegraphed:—

"Treasury declines to contribute more than half subsidy after Mauritius contribution, which might be 8,000*l.*, is paid. I propose to agree. Her Majesty's Government already pay 55,000*l.* to East Africa line."

The Government of India accepted this proposal, feeling that it was the only means by which telegraphic communication between India and Mauritius could be secured.

The Treasury, it will be observed, gave no reasons for its decision, or, at any rate, no reasons for it were communicated to the Government of India.

It is submitted that the grounds put forward in Sir D. Barbour's dissent, as quoted above, were sufficient to justify the recommendation of the Government of India that India should bear only "a moderate share" of the subsidy.

* In Despatch No. 11 (Telegraph) of 23rd June, 1891.

* No. W. 42, July 9th, 1891.
